

AUTOMATION FOR METATRADER 4 • FOREX • GOLD • CRYPTO • INDICES

SIGNAL COPIER MT4

Stop missing VIP entries while working or sleeping. Read your Telegram channels—public and private—and execute every signal in your MetaTrader 4 account within seconds, featuring dynamic lot sizing, multiple Take Profits, and independent risk management for Forex, Gold, Bitcoin, and Indices.

✓ Compatible with any MT4 broker | ✓ Private channels without admin permission | ✓ 5-minute setup

1. The Problem: Why You Are Leaving Money on the Table

You pay for VIP signal channels... yet your results do not match the group's calls. It is not the strategy or the provider's fault. The problem is executing manually:

- **You miss the best entries:** The channel posts an XAUUSD signal while you are working, driving, or sleeping. By the time you check your phone, price has already moved 40 pips.
- **Lot sizing and calculation errors:** Rushing to copy trades manually leads to opening a lot size that does not match your balance or forgetting to place the Stop Loss.
- **Lack of active trade management:** Price hits TP1, you fail to move your Stop Loss to Break Even in time, the market reverses, and a winning trade closes at a loss.
- **Generic copiers fail outside Forex:** A 20-pip Trailing Stop works on EURUSD, but on Gold (XAUUSD) or BTCUSD it stops you out instantly due to volatility and spread.

2. The Solution: A Copier Designed to Protect Your Capital

2.1 Copy Private, Public, and Multiple Groups Simultaneously

Link your own Telegram account in under 1 minute through our web portal. Copy any VIP channel or group you belong to—without requiring the channel owner to install bots or grant permissions—and monitor multiple channels simultaneously from a single MetaTrader 4 chart.

2.2 Risk Management Calibrated by Asset Class

Every market moves differently, and your bot accounts for it. Configure Break Even and Trailing Stop independently for:

- **Forex:** configured in standard pips.
- **Gold / XAUUSD:** configured in real pips (10 pips = $1).
- **Cryptocurrencies (BTC/ETH):** configured directly in USD.
- **Indices (US30, NAS100, US500, GER40):** configured in points.

2.3 Automatic Dynamic Lot Sizing + Multiple Take Profits

Define what percentage of your balance you want to risk per signal (for example, 1%) and the bot calculates the exact lot size based on Stop Loss distance. If a signal includes TP1, TP2, and TP3, it opens an individual order for each target and automatically splits the risk across all of them.

2.4 Bad-Entry Protection Shield

- **Price deviation filter:** If price has already moved too far from the entry level, the signal is discarded automatically.
- **Max SL filter & No-SL block:** Protects your account against provider typos (oversized Stop Losses) or signals sent without a Stop Loss. Independently toggleable and configurable for Forex (pips), Gold (real pips), Crypto (USD), and Indices (points).
- **Signal expiration:** Ignores stale messages (configurable in seconds).
- **Pending order cleanup:** Automatically deletes Limit or Stop orders if price hits TP, SL, or moves favorably past your threshold without triggering.
- **Live cancellation and close:** If the provider replies to a message saying "close" or "cancel", the bot closes or deletes the order for you.

2.5 Single Chart & Zero Broker Friction

Whether your broker uses XAUUSD, GOLD, EURUSDm, #BTCUSD, or .pro, the bot auto-detects prefixes, suffixes, and aliases, trading all instruments from a single open chart in MT4.

3. From Zero to Automated Trading in Under 5 Minutes

- **1. Link your Telegram (private channels only):** Enter your MT4 account number and phone number on our linking portal, confirm the official Telegram code, and you are all set.
- **2. Install the file in MetaTrader 4:** Copy `SignalCopier.ex4` into your `MQL4/Experts` folder, enable WebRequest permissions, and drag it onto a single chart.
- **3. Configure your channels and risk:** Enter your channel usernames or IDs, select fixed lot size or risk %, adjust your deviation and Max SL filters, and let the bot work 24/7 for you.

Includes a step-by-step Installation Manual and direct support for any questions.

4. Manual Copying vs. SignalCopier MT4

Feature	Manual Copying	With SignalCopier MT4
Execution Speed	30 seconds to 15 minutes	**Instant (seconds)**
Availability	Only when checking your phone	**24/7, even while sleeping**
Multiple Take Profits	Tedious to enter manually	**Automatic with split risk**
Break Even & Trailing Stop	Requires watching the screen	**Automatic and asset-calibrated**
Risk % Lot Calculation	Guesswork or external calculator	**Exact based on balance & SL**
Late Entries	High risk of poor fill price	**Blocked by deviation filter**
Wrong SL or Missing SL	Critical risk from provider typos	**Blocked by Max SL filter**

5. Plans and Pricing

Just one winning entry you don't miss pays for an entire month of the bot.

Plan	Price (USD)	Savings	What's Included

Monthly	**$19 USD/month**	—	1 MT4 account. Unlimited channels (public & private). Updates and support.
Quarterly (Most Popular)	**$45 USD / 3 month ($15/ month)**	21% OFF	Everything in Monthly. Priority technical support.
Annual	**$139 USD / year ($11.50/ month)**	39% OFF	2 MT4 accounts (e.g., Demo + Live). Unlimited channels. All updates.
Lifetime	**$299 USD**	One-time payment	2 MT4 accounts for life. Free account number changes if you switch brokers. All future updates.

7-Day Free Trial (Demo Account)

Want to see it open trades before paying? Activate your 7-day Free Trial on a Demo account with no commitment. Visit the portal, get activated in minutes, and watch it copy your own Telegram channels live.

6. Recommended Broker for SignalCopier MT4

Don't have a MetaTrader 4 account yet or looking for faster execution? Although SignalCopier MT4 works with any broker, our recommended and 100% tested platform is **HFM (HF Markets)**: fast execution on Forex, Gold (XAUUSD), Cryptocurrencies, and Indices, competitive spreads, and full support for Demo and Live MT4 accounts.

Open an HFM account (Official Recommended Link): https://www.hfm.com/sv/es/?refid=322090

7. Frequently Asked Questions (FAQ)

- **Does the VIP channel owner need to grant permission or add a bot?** No. By linking your own Telegram account, SignalCopier reads signals directly from channels you are already a member of, whether public or private. Nobody in the group knows you are using a copier.

- **Is linking my Telegram account safe?** Yes. Access uses the official Telegram API and the system only reads the latest messages from the channels you configure in MetaTrader 4. It never sends messages or modifies your chats, and you can revoke the session anytime from your Telegram settings.

- **Does it work with any MetaTrader 4 broker?** Yes. It is compatible with any MT4 broker (HFM, XM, IC Markets, Exness, RoboForex, FBS, MT4 prop firm accounts, etc.). The bot automatically detects suffixes or alternative names such as GOLD, EURUSD.m, or #BTCUSD.
  If you don't have a broker yet, you can create an account with HFM here: Register with HFM

- **Do I need to keep my computer turned on?** Like any MetaTrader 4 Expert Advisor, the bot requires MT4 to remain open and connected to the internet to execute orders. You can run it on your PC or on a 24/7 trading VPS.

- **What happens if a signal arrives without a Stop Loss or with an oversized erroneous SL?** If the Max SL Filter is enabled for that asset (enabled by default), the bot automatically discards the signal to protect your capital. If you choose to disable the filter while using dynamic lot sizing, the bot still won't fail—it safely falls back to your fixed LotSize value.

- **What if I switch brokers or open a new account in the future?** If you have an active plan, just message support with your new MT4 account number and we will update your license at no extra cost.

8. Stop Chasing Signals. Make Them Work for You.

Connect your channels today, protect your capital with professional risk management, and never miss an entry again because you were busy.
