

## Order-Panel

I need an Order-Panel for MT4.

It should work stable with 4- and 5-digit Brokers and should be able to handle all symbols (like CFDs, Forex, Metals, ...)

It should be able to:

- place preselected easy adjustable lines (- - -) at the visible part of the chart.  
['StopLoss' (red), 'TakeProfit' (green) and - if selected - 'Pending' (black)]
  - there should be a checkbox at the chart to be activated if a pending order should be planned.  
If the checkbox is activated, at the actual price a 'Pending'-line should appear.  
If the checkbox is deactivated, the 'Pending'-line disappears and the order is planned as a market order again.
- show me in real time while the lines have been placed data about the planned Trade:
  - for the size of the position there should be a input box at the chart where can be chosen between
    - recommended lot/contract-size based at the risk in % of the account-balance or
    - a fix size.
    - The previous setting (both types) should remain saved for next use.
  - risk in pips and the account-currency
  - targeted TP in pips and the account-currency
  - risk/reward ratio
  - how much margin is required to place the trade
- recognize the planned trading-type (long, buy stop, buy limit, short, sell stop, sell limit) using the 'StopLoss' 'TakeProfit' and if necessary the 'Pending'-Line.
- place the order by a single click to a "Open Order"-button at the chart.
- be moved to various places at the chart by mouse.
- be minimized.

When the Panel is minimized, all lines should be invisible. If it's normalized, the lines should appear again where they have been while minimizing the panel.

The idea for the panel is inspired by:

- <http://www.mql5.com/en/market/product/1150>  
That's the way the panel shall look like, but instead of the ordertype-buttons there should be a checkbox "Pending Order" and the calculated data – as described above.
- <http://codebase.mql4.com/8876> (good info-panel, but no required margin)
