

1. Make the currency converter into **one single file** so that the "SIGLOT Currency Dashboard" does not depend on the actual "Currency Strength Index". The file should be self-contained not calling functions/attributes from the "Currency Strength Index" file
2. Create one more table called "**Favorite**" just like the "Priority Table" where users can **select** the list of currency pairs that will appear here for trading
3. **On clicking** on the currency pair under the "**Default table** (asset meter table to be precise)" it should "**stay as it is**", and on **2nd click** go back to its' usual appearance
4. Another table called "**Signals**" will be created, the table will be populated with currency pairs that have met a particular entry condition of a specific trading strategy

**Priority Table** **SIGNALS** New table

Will read "Incoming Trades"

Will read active "Active Trades"

This will not appear at all until Rule 7.1 as been met. It will not contain the word buy/sell, rather it will contain the name of the strategy thats about to occur. It will rather be displayed as illustrated below.

**Rebound** **Tremor**

And on click it will open in current chart as before

Currency	Strength %	Trade Bias
EURAUD	85.7 %	Buy
AUDNZD	-83.2 %	Sell
AUDCHF	-81.0 %	Sell
EURJPY	75.0 %	Buy
GBPAUD	74.2 %	Buy
AUDCAD	-74.0 %	Sell
AUDUSD	-73.3 %	Sell
NZDJPY	70.6 %	Buy
CHFJPY	66.7 %	Buy
GBPJPY	54.8 %	Buy
CADJPY	54.5 %	Buy
USDJPY	53.3 %	Buy

5. In-between the **Priority Table** and the **SIGNALS** table, an Up and down arrow is place which **on 1<sup>st</sup> click** hides the currency table and on **2<sup>nd</sup> Click** reveals them  
When the table is hidden, it appears as illustrated below and on 2<sup>nd</sup> click, is reveals the entire table

Priority Table		SIGNALS
----------------	--	---------

6. Under "Priority Table", Change the text "Currency Trend Meter" to " Trend Meter " and "Currency Range Meter" to " Range Meter "
7. Remove open in new tab arrow replace with actual click on pair and current pair should be converted to "open in a new window"

8. Ability to decide which of the three tables namely, Default, Priority & Favorite table to display by default. The user selects the table they want to view by default
