

General information,

Master Account transmit Signal to Slave Account (Slave account No.1), Slave account No.1 transmit Signal to slave account No.2

Master account working with a martingale expert (0.01, 0.02, 0.04,,,etc) every X pips.

Reason for the needed expert,

Generally there is a delay in the appearance of the signals “by 50 seconds” between the Master account (MT4) & the first slave Account No.1 (MT4), Meanwhile both trades have same entry value, just a delay of appearance in the first Slave account No.1 (MT4).

Ex: Master open a buy position on a value of 1.0900, after 45 seconds the buy position appears on the Slave account No.1-MT4 with the same entry value 1.0900

This problem happens only between the Master Account and the first Slave account MT4 which is due some brokers precaution!

Problem/affect: this delay can cause different wrong & exit entries to slave account No.2 (Mt4)

What is needed?

To have an expert to carry the following,

- Expert to copy first position Only either Buy/Sell from slave account No.1-MT4.
- Expert to open new orders Buy/Sell every “X” pips with double lot (0.01, 0.02, 0.04,,,etc).
- ONLY, first opened position by the needed expert (which is actually position no.2 as position no.1 is the copied position) SHALL be opened at a distance “X” from the first position value of Slave account No.1 Not from the first position value of slave account No.2, due to the delay problem.
- Others positions (3rd, 4th, 5th,,, etc) can take place normally from 2nd position on slave account No.2-MT4.
- Once First Buy Position close on Slave 1 account, All Buy Positions only shall be closed on Slave account 2, leaving Sells Positions (Open).
- Once First Sell Position closed on Slave 1 account, All Sell Positions only shall be closed on Slave account 2 leaving Buy Positions (Open).

(Please see the below Example Illustration by values)

Master-MT4

Buy Position: **1.0900**

Slave 1-MT4

- After 45 seconds, Buy position appeared but with same value: **1.0900**, “broker do that to protect multi copying”, on that time actual price was **1.0903**

Needed Expert will link Slave account No.1 with Slave Account no.2

Entry and exit will be from slave account No.1-Mt4

Slave2-M4

-Here is the place for the needed expert.
Expert to copy First position only buy/sell from slave 1-Mt4, in this case, first position (Buy) opened at **1.0903**.

-Expert stop copying any other positions & start opening positions with double lot every certain X pips (ex: estimated X=15)
Ex: First Position copied/opened at 1.0903 with 0.01 lot
Second position with 0.02 lot expert shall open @ **1.0915** (15 pips from the first Buy position) not from **1.0903**
Third position with 0.04 lot expert shall open @ 1.0930,,,,etc.

*Once First Buy Position close on Slave 1 account, All Buy Positions ONLY shall be closed on Slave account 2, leaving Sells Positions (Open).

*Once First Sell Position closed on Slave 1 account, all Sell Positions ONLY shall be closed on Slave account 2.

NB: some positions Buy & Sell Opened at same time, when Master/slave account no.1 close first Buy position, only all Buy positions on slave account no.2 shall be closed leaving sell positions opened.

When Master/slave account no.1 close first Sell position, only all Sell positions on slave account no.2 shall be closed leaving Buy positions opened.
