Pipfinite Breakout Analyzer EA

I would like to have an EA based on
https://www.mql5.com/en/market/product/8418
(pipfinite breakout analyzer indicator) [I don't own the indicator yet so if u can make with demo version of indicator]

Here's the code that provided by pipfinite

https://www.mql5.com/go?http://www.pipfinite.com/sharef/PipFinite%2520EA%2520Calls.zip

Picture show that how's the indicator works

Concept

@ When the signal appear[buy signal] , (blue arrow)enter trade and exit trade (red arrow) , sell order On the contrary.

@ When the profit number show up , exit trade and wait until next signal. [this function can be turn on or turn off]

@ when the profit number show up, exit trade by counting the number of occurrences. default appear time "3" and exit trade. [the profit will increase as the breakout progresses (by bar)]

 (I.e. the breakout is success and show first profit number +100 and continues increase after next bar +200 and so on so if the third time profit number appear +300, exit trade) I don't know this function will work or not, if not please let me know thanks [this function can be turn on or turn off]

@Exit trade by . automatically move the TP base on average breakout or short team breakout once the order open.

[this function can be turn on or turn off] [this function have two option (AB/STB)to be selete]

@ Martingale system. if the order gose wrong direction. open an order with adjustable inputs. (I.e size and step) [this function can be turn on or turn off]

@ others fucntion like money management, time and day filter, fixed lot size, and all the common setting.
