

ALGORITHM SYSTEM FACTOR

Request: System similar to myfxbook and mql5 monitoring.

Summary: The system must allow the registered user to enter mt4 account data into our form and the system must pull the operational data to the web system.

System Requirements:

- Show deposit made by the user in his account;
- Maximum Show maximum drawdown and wins;
- Initial Show initial balance and current balance;
- Total weeks in operation;
- Total pips;
- I need to be able to pull currently open orders with profits or drawdown;
- History;
- Monthly statistics;
- Summary of Daily Transactions Type the report the broker sends with total gains or losses on the day;
- Closing and summary of operations: Daily, weekly and monthly profit or loss;
- Show cumulative% gain within month;

NOTE: Site in php the system must be suitable to the site in php, with the need for a Windows vps service the developer must inform.

NOTE 1: At the front of the site should be examples of accounts in operations, I wish the administrator could choose the accounts or the system should select the accounts with the best performance.

NOTE 2: In the client area the user must be able to register the mt4 account data to be monitored.
