

The Dashboard

1. Remove “Priority Table”

The “**Sell/Buy**” text under the “Trade Bias” column should be replaceable with e.g. PUT/CALL, Higher/Lower depending on user preference
 The “**Trade Bias**” text under the time column should be changed to “**Direction**”

2. The “Favorite Table” and the “**SIGNALS table**” is no longer sub-divided into Trend meter and Range meter. It is now a single table

3. The **Sell/Buy** indicator under “Trade Bias” will henceforth be determined by the rules in the EA strategy not the dashboard indicator
4. Edit the **Default Table** to include **SIGNALS** table while removing priority table

Change the “**Default Table**” text under the dashboard setting to “**Table In-View**”

5. Remove the custom text and replace it below table. It should appear across all the tables

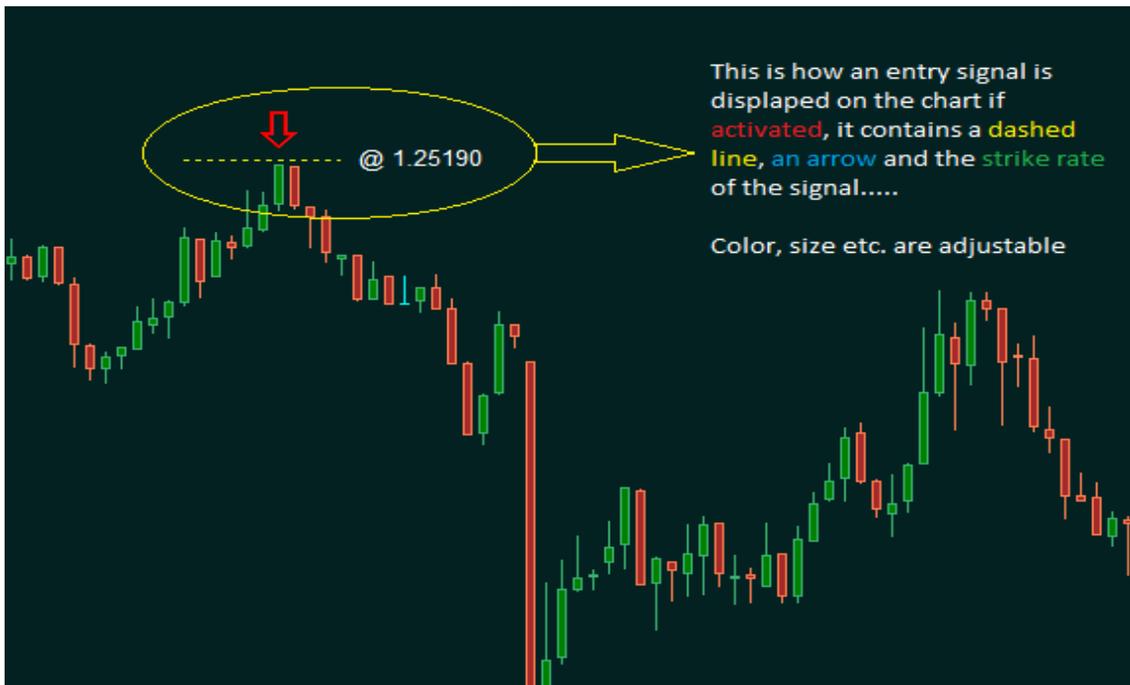

The text should be able to work with link to website or resources

- Remove the **minus sign** that reflects under the **Strength %** column

Visuals Notifications:

- Entry Signal Indicator** (Colors, Size: Adjustable) (On/Off): Entry signal is displayed as illustrated in the picture below. A **dotted line** marking the exact entry point and an **arrow** corresponding to the direction of the signal

The dotted line in the picture above is drawn at the **close** of the entry candle

Early Warning Mechanism:

- **Early Warning Rules:** Once rules **R1, R2, R3, R4 and R5 + Price** (below corresponding outer Bollinger band depending on trade bias), change the color of the trade direction signal to yellow (signaling a **get ready** action)
- The text “Ready” is displayed

Currency	Strength %	Direction
EURCAD	56.7 %	Ready

The above table signifies get ready

- And once the last of the rules have been met at the **close of the candle**, change it to **Green/Red** depending on trade bias signaling a **go** action

Currency	Strength %	Direction
EURCAD	56.7 %	Call

The above table signifies a call action

- Once all the **early warning rules** has been met, move affected pair to the “**SIGNALS**” table

Priority Table		SIGNALS
Incoming Trades	Time: 21:48:35	
Currency	Strength %	Trade Bias

- The **newest signals** are stacked above the old ones
- And once the “early warning signal” is not fully executed into an entry, it disappears from the list

EA Settings:

- **Applied Table:** The user chooses between **Default Pairs** or **Favorite Pairs** and based on the user's selection, the EA only looks for signals on the currency pairs listed on the table. If a listed pair in the **favorite pair table** has been excluded from the list under the **Specific Pair(s) Lock**, gray out the signal bias, and don't show trade direction

Currency	Strength %	Direction
EURCAD	56.7 %	Upgrade Now

- Rather show a grayed out column as described above

- Ability to **drag and drop** currency pair into the **“Favorite Pair”** table

The screenshot displays a trading interface with the following components:

- Favorite Pairs Table:**

Incoming Trades	Time: 21:29:31	
Currency	Strength %	Trade Bias
EURUSD	-77.1 %	Sell
- Market Watch Table:**

Symbol	Bid	Ask	!
XAUUSD	1521.12	1521.51	39
USDCHF	0.99148	0.99157	9
GBPUSD	1.21443	1.21453	10
EURUSD	1.09738	1.09743	5
USDJPY	106.330	106.336	6
USDCAD	1.33238	1.33248	10
AUDUSD	0.67245	0.67257	12
EURGBP	0.90352	0.90366	14

A blue arrow originates from the 'Sell' trade bias in the 'Favorite Pairs' table and points to the EURUSD entry in the 'Market Watch' table, illustrating the drag-and-drop functionality.
