

I need Expert Advisor for MetaTrader4. the market entry signal is based on custom indicator

All expert settings are adjustable from the control panel

multi-chart, where all charts of the market will need to be verified with only one chart

I want to work fully from one chart only, regardless of the time frame.

It must be available to turn on or off the timeframes from the control panel

StopLoss (SL) and TakeProfit (TP) - Profit and Stop Loss can be set by parameters from the expert control panel

Levels are determined by 5-digit points

Exit from the position is when the specified profit or reverse signal is reached when the price reaches one of them first

(Spreads are calculated when placing profit or stop loss values)

The levels are calculated relative to the price of opened position (the Ask price - for the long positions and the Bid price - for short positions)

Trailing stop must be configurable (AllowTrailing = True / False)

If the profit tracking value is too low, the breakpoint must be set to the minimum distance allowed by the broker and if the 0 values are specified, the profit tracking is not used.

Stop loss can only be moved in the direction of profit

If there is an open position, and there is an opposite signal, the open position must be closed before opening a new position in the opposite direction.

This feature must be editable

CloseInReverse = True / False

Commissions should be included in the profit if the account is subject to the commission system

If there are any errors, you should print a message describing the error

The information on the opening/closing of positions and of modifications of the SL should be stored in the Journal

The expert must automatically add a comment to each position to know the time frame for opening the trade (very important)

Example

Add comment M1 when a trade opens on the M1 time frame

Add comment H4 when a trade opens on the H4 time frame

### Trading rules

When a sell signal appears from the indicator, a sell position opens and vice versa

When a buy signal appears from the indicator, a buy position is opened

### Expert settings

Maginumber: a unique identifier through which EA recognises and manages its own positions.

EA\_Comment: Put comments on the deal

MaxSPREAD: Maximum spread allowed to trade (default 3 pips)

SlidingPrice: Maximum sliding price

Custom Settings

TakeProfit (5 digits) pips

StopLoss (5 digits) pips

(AllowTrailing = True / False)

TrailingStop (5 digits) pips the number of profit points after which you TrailingStop at work

TrailingStart (5 digits) pips

TrailingSetup (5 digits) pips

Example: TrailingStop =120

TrailingStart =50

TrailingSetup =20

When earn 120 pips from the open position the TrailingStop is triggered and the stoploss is moving by TrailingStart value (50 pips)

after then Every time When the price moves by TrailingStart value (50 pips), moving stoploss by TrailingSetup value (20pips)

Break Even: Move the stop to the entry point when you earn a certain number of points (5 digits) pips

## Risk Management

FixedLots: fixed trading volume

AutoMM: Activates automatic risk management with values greater than zero

Example: at AutoMM = 2, EA opens positions equal to 0.2 lots (20,000) given account extent of 10,000. This places 2 percent of the account extent at risk per individual transaction

AutoMM\_Max: The maximum allowable risk expressed as a percentage of the calculation for each individual transaction

MaxAccountTrades: The number of simultaneous open positions in the account on all pairs. The value is zero, which means that this option is disabled

MaxAccountDD: The maximum allowed account downgrade by percentage. This option activates with values greater than zero. This option depends on the current undo. When the ratio is reached, new trades are stopped, and a message is printed

MaxAccountDDprice This option depends on the current undo. When the account reaches the specified amount, the opening of new trades and the printing of a message are stopped

LimitTotalLots Stop opening new trades and printing a zero message means the value is disabled

## Time Management Settings

All days by default run

End\_Hour the Expert End of Friday is closed

## Notifications

EMAIL Notification = True

PUSH Notification = true
