1) Modified 3c_Turbo JRSX Indicator

This indicator **will be used on a 5 minute timeframe** but will be needing technical data from the 1hr and the 15 min timeframes, the same data used in the panel above, but should be an **indicator** on its own.

The following inputs should be built in

Pop-up Alerts = True or false
Notifications (sent to mobile) = true or false
Plot Circles = True or false
Bull_Circle_color = DarkSeaGreen
Bear_Circle_color = LightCoral

*The current JRSX indicator colors and line weight should still be editable as normal

1 hour EMA data	
Pink EMAs	2,3,4,5,6,7,8,9,10,11,12,13,14,15
Blue EMA	17

When the indicator should plot circles:

**Bullish:** circle plots only when following conditions are met:

1 Hour timeframe: Atleast 10 out of 14 pink EMAs are above the Blue EMA
15 Minute time frame: 50 EMA > 200 EMA
5 Minute timeframe: JRSX in oversold

Plot small circles below every candle when closed and JRSX oversold (≤ 30). A notification saying "Potential bullish entry on xxxyyy pair " should be sent after the first small circle is plotted. Xxxyyy should be whichever currency pair the indicator is loaded on.

Plot a larger circle Below candle that closes when indicator shows direction change (ie: changes colour)

JRSX Oversold and plots small circles

Indicator has changed colour on the close of candle, indicating possible direction change and larger circle is plotted

Bearish: circle plots only when following conditions are met:

1 Hour timeframe: At least 10 out of 14 pink EMAs are below the Blue EMA
15 Minute time frame: 50 EMA < 200 EMA
5 Minute timeframe: JRSX in overbought

Plot small circles above every candle when closed and JRSX overbought (≥ 70) A notification saying "Potential Bearish entry on xxxyyy pair " should be sent after the first small circle is plotted. Xxxyyy should be whichever currency pair the indicator is loaded on.

Plot a larger circle Below candle that closes when indicator shows direction change (ie: changes colour)
