

Renko ZigZag

The strategy is made for Renko charts.

Place pending orders based on previous level of zigzag indicator

I should be able to change all values of the zigzag indicator

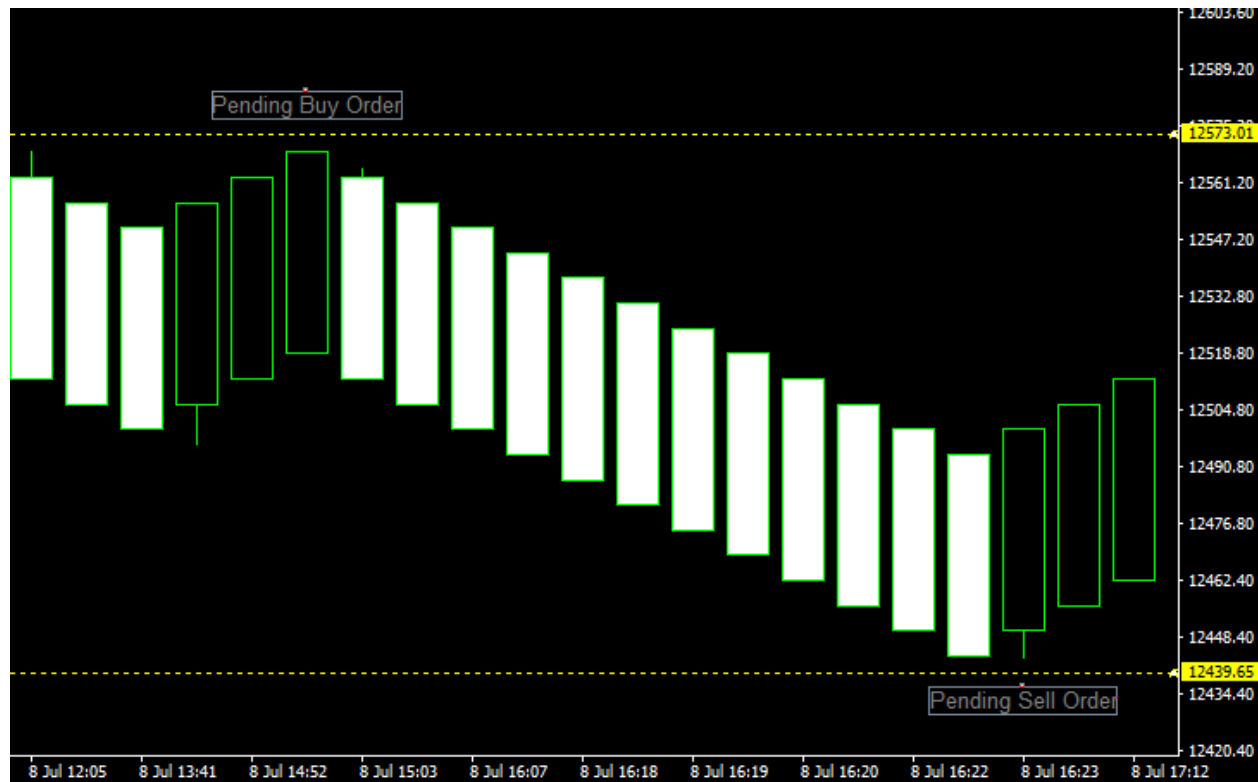

▼ @DAX_U0,M11 12862.50 12888.25 12861.50 12882.75

Entry Rules

1. Entry Rules:

1. Put pending buy/sell orders after last swings:
2. Please note I need to be able to add specific number that the order should be away from top/bottom price (for example 5pips)

Exit Rules

1. Normal Exit orders:

1. Take profit:
 1. Option#1: Fixed number of pips
 2. Option#2: Daily ATR * variable number (2 or 3 or 4 or ...)
2. Stop-Loss:
 1. Option#1: Fixed number of pips
 2. Option#2: Daily ATR * variable number (2 or 3 or 4 or ...)

2. No Stop-Loss, Take profit for recovery orders: (this will be explained in next slide)

1. When trade in recovery mode then I should be able to choose between two options to take profit of the group of orders:
 1. Close all group trades (buy group alone, sell group alone) when total profit of (buy group alone, sell group alone) is equal to breakeven
 2. Define specific profit in currency for the whole group, example 10\$

Initial and Recovery Trades

Our first option to exit trades was stop-loss, now our option to exit trades is a grid system:

The first trade initiated from the EA will call it **“Initial Order”**, the trades that comes after that, will call them **“Recovery Orders”**.

The EA should open only one initial trade per side (up or down), for example, the EA gives a signal for buy, then market reversed and we opened 3 recovery buy orders, and at some time the EA gives a sell signal, we should execute this sell signal, and this is a new group of selling orders.

Recovery Orders:

Buy orders are together (one group)

sell orders are together(second group).

How to open the **Recovery Order**:

When the EA gives a buy signal, only one initial buy order is executed, then if price went down, I want to be able to define 2 setups:

Setup one: Manual Grid Recovery: (Check following image)

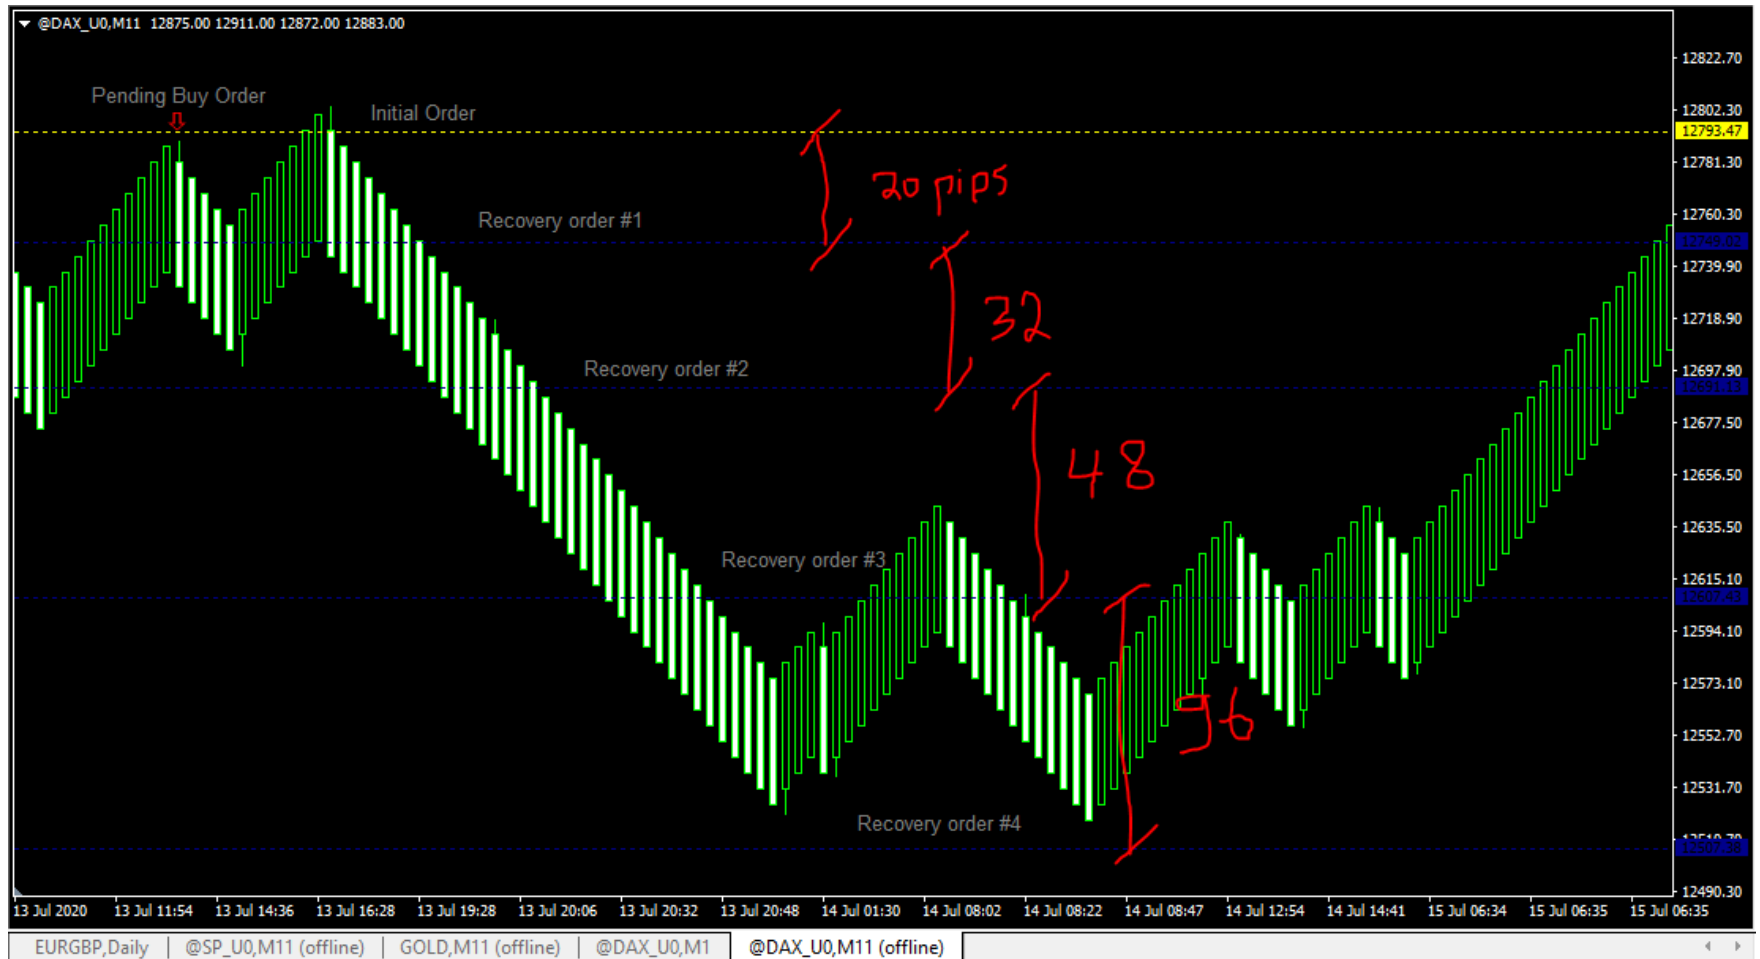

1- I need to be able to define Grid space manually with different gap space

Example: (20pips, 32pips, 48pips, 96pips, etc....)

2- I need to be able to specify the lot size for each order of the grid:

Example: (0.01, 0.02, 0.05, 0.05, 0.06, 0.01, 0.01, etc.....)

Manual Grid Recovery

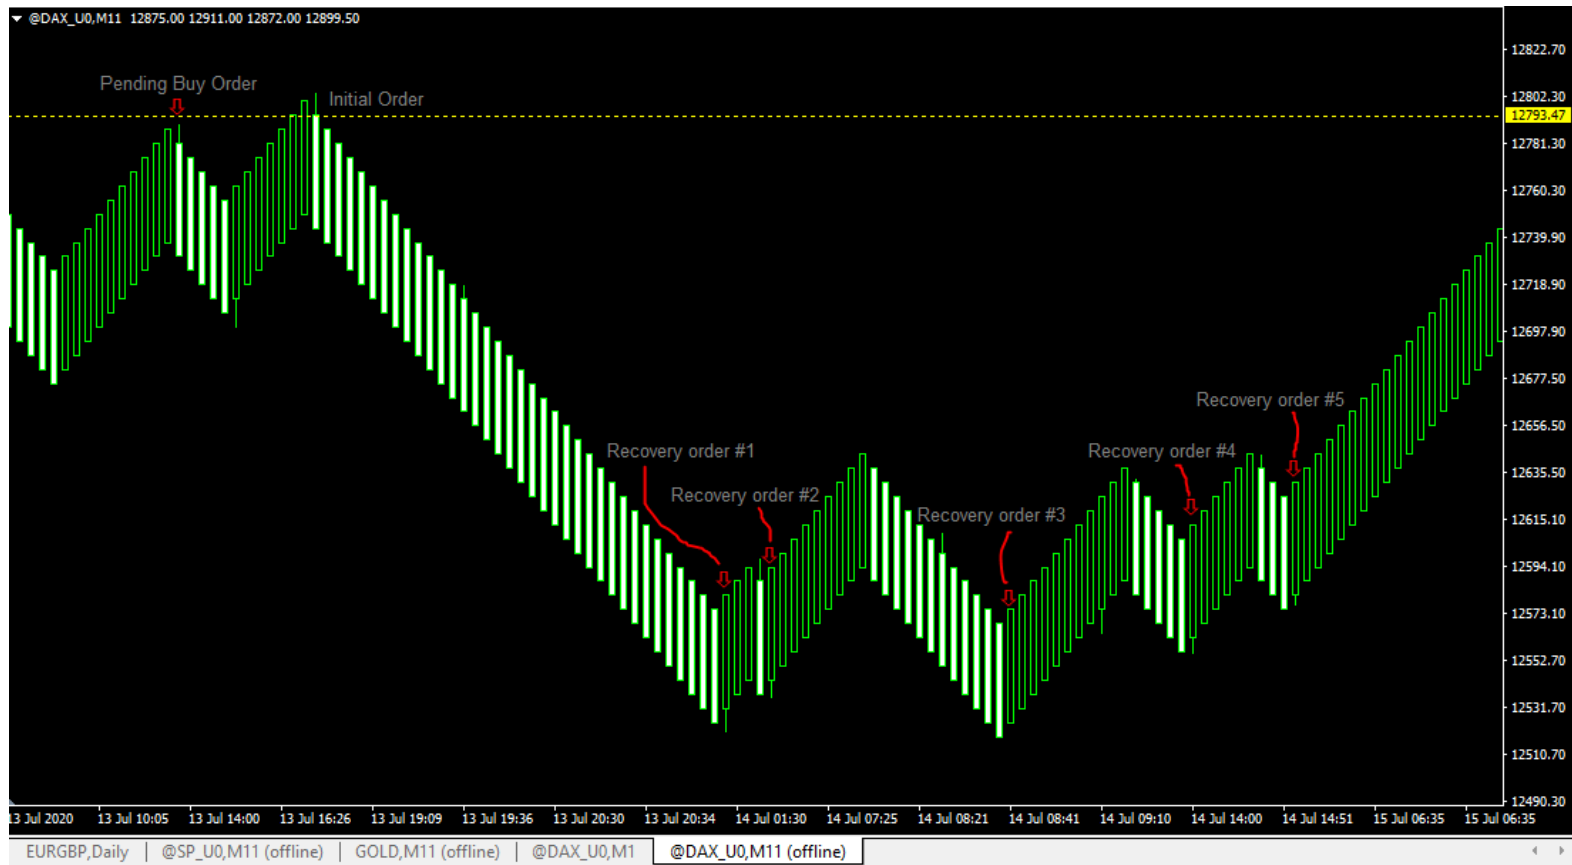

Initial and Recovery Trades

Setup Two: Automated Grid Recovery: (Check image below)

1. Open buy order on each “first candle only” after reversal
2. I need to be able to specify the lot size for each order in sequence:
Example: (0.01, 0.02, 0.05, 0.05, 0.06, 0.01, 0.01, etc.....)

Automated Grid Recovery

Trade Size

1. Initial Trade Size

1. Select between one of the options:
 - a) Fixed lot size
 - b) % of the equity

Later I will modify this but in a new work order

Other settings

Other settings and notes:

1. Disable any order execution if spread is higher than specified number of pips
2. Disable any order execution if slippage is higher than specified number of pips
3. To be able to select different time slots for EA to work, for example:
 1. EA should work only between 1am to 3am, 5am to 6am, 3pm to 6pm and 10pm to 11 pm. (Only 4 time slots needed)
 2. Or EA should work 24/5 if needed
4. EA should be able to buy and sell orders at the same time.
5. Ability to change Magic Number
6. Ability to add comments for each trade
7. Enable/Disable Day trading filtration (Ability to choose days for trading)
8. When entering first order, send email notification + sound notification
9. Stop orders and take profit are invisible to broker

News, Time and Date Filter

Enable News filter with the option of closing trades before news (Check graph)
