

Existing EA script modifications (2 updates) – all source codes provided

Dear developers and freelancers,

I would need to update an existing EA as follows:

1 – replace exit strategy „RonZ” by a „10 steps” exit strategy (former RonZ mq4 provided for comparison purpose, and 10 steps mq4) – lines 360 to 595 in the mq4 script.

It should work on a 5 digits broker, for any currency pairs, including JPY.

For more details, refer to folder Update 1

2 – iCustom function and linked to it „EMA 5,6” indicator to be replaced by „BB stop” indicator for opening trade purpose.

After update, the trade should be opened at closed 1st candle after trend change:

Please have a look at the attached documentation and let me know if you have any questions.

EA mq4 file will be provided to the selected developer.

System characteristics:

MT4 platform

5 digits broker

All expressed in points

For information:

No limitation for currency pairs and timeframes
