

Extensions for Signal Turbo

Panels to be displayed

Currently some lines of information is displayed on the chart, this should be split and extended to three separate panels.

There should be displayed three panels on the right-hand side of the chart. It should be implemented in a way that additional values can easily be added.

Statistics

- like in the "Broker Spy Module" of <http://www.wallstreet-forex.com>
- number of EA trades closed and their profit.
- minimum/maximum spread

Status

- number of open EA positions and their profit.
- current spread
- current distance to last position
- next position size in lot
- current drawdown

Configuration

Relevant configuration parameters should be displayed:

- distance between positions
- position size in %
- minimum spread to open positions
- minimum margin level to open positions

Close positions in order to avoid margin call

Open EA positions should be closed as long as margin level is close to margin call. (distance 10 %)

Open additional positions for signal positions

This optional feature allows to open an additional position for each signal position. This should happen immediately after the signal opens the position. If the EA is started later, no additional positions should be opened.

This feature allows to gain also if the signal positions never go to loss before being closed.

There should be a setting for the number of "complementing" positions. So it could be controlled if only the first or also later signal positions should lead to additional positions.

The additional positions should get a different magic number than the regular EA positions.

Additional indicator(s)

Built-in indicator MACD and maybe another one should be added and selectable.

Auto save settings

The current settings should be saved when starting the EA to a file called
SignalTurbo_LastSettings_<SYMBOL>.set
