

You need to deliver the source codes, then leave me full ownership of the indicator, leaving me 100% copyright on it (for use, sale, publish or anything other)

Leave all parameters external

Remember that it is necessary to deliver the indicator without errors

Indicator for MQL4 and MQL5 (MT4 and MT5 platform)

The indicator is based on 2 lines, Upper and Lower lines

How to calculate the lines:

I need 2 Methods: (To be selected externally)

Method 1

{

$Ma \text{ value} + Atr * Multiplier$ (Upper Line) (multiplier is only a Double value)

$Ma \text{ value} - Atr * Multiplier$ (Lower Line)

Leave these parameters external for the MA: Period, Shift, Ma method, Applied price

And leave also the Atr parameters external

}

Or

Method 2

{

$Ma \text{ value} * (1 + Multiplier / 100)$ (Upper Line) (multiplier is only a Double value)

$Ma \text{ value} * (1 - Multiplier / 100)$ (Lower Line)

Leave these parameters external for the MA: Period, Shift, Ma method, Applied price

And leave also the Atr parameters external

}

Furthermore, in the image, you can see the presence of 2 arrows

The arrow creation rule is easy, When the price crosses the lower line, upwards, we have a Buy signal

When the price crosses the Upper line, downward, we have a Sell signal

Note: The arrow must appear in real time, as soon as the price crosses the line, then disappear if the price goes back, or stay forever if the bar closes after the price. -> The alert, on the other hand, must be sent when the arrow is confirmed at 100% with the closing of the bar.

Important: Arrows must be Indicator Buffer 0 and 1 (0 for buy arrow, 1 for sell arrow)

The color of the upper line and of the down line must not only be blue and orange, but must follow the following colors:

Here you can see colors and dimension

0	 Navy	7. 
1	 Maroon	7. 
2	 Blue	3. 
3	 Red	3. 
4	 Aqua	1. 
5	 Yellow	1. 

the idea is to plot several lines of different widths and colors so it can display a beautiful effect!!!

Upper: Navy size 7 – Blue size 3 – Aqua size 1

Down: Maroon size 7 - Red size 3 – Yellow size 1

Arrow colors: Orange Sell arrow – Royal blue Buy arrow

- put the option to disable the arrow
- put the option to disable the lines
- Leave external all parameters, used for calculate the 2 lines
- Enter the ability to activate or deactivate: Signal Alert, Push notification on phone, email notification, beep sound (For the Buy or Sell Arrow)
- Enter the maximum limit of 1000 bars to apply the indicator (editable from settings)
- Enter the settings to change the colors and dimensions of each line
-

Not to do, just my personal note:
