

**Long entry:** After the first green Mean Renko CCI candle closed (the candles before were red) => place a limitorder at 50% (changeable in settings) of the previous candle body. Delete limit order after current bar (current bar means the next bar after the first green candle) closed and order was not executed. Then wait for a new signal.

**Exit:** In this second after the first red CCI candle closed via market order.

**Short entry:** After the first red Mean Renko CCI candle closed (the candles before were green) => place a limitorder at 50% (changeable in settings) of the previous candle body. Delete limit order after current bar (current bar means the next bar after the first red candle) closed and order was not executed. Then wait for a new signal.

**Exit:** In this second after the first red CCI candle closed via market order.

**General:**

- Only one entry per bar allowed, maximum open trades can only be 1 due to strategy.
- This EA should also work in optimization mode
- This EA should work as fast as possible especially when closing orders to reduce danger of slippage

**Parameters:**

- Magic Number
- Comment
- Lots per 100 Balance (f.e value 0.01 means use 0.01 lot for every 100 euro)
- Limitorder at % of previous candle body (default 50, I would like to choose between 50 and 70% using a dropdown menu)
- Takeprofit in Pips
- CCI Period (indicators value)
