

Long entry: After the first bullish Mean Renko candle closed (the candle before was bearish) => place a limitorder at 50% (changeable in settings) of the previous candle body. Delete limit order after current bar (current bar means the next bar after the first bullish candle) closed and order was not executed. Then wait for a new signal.

Exit: In this second after the first bearish candle closed via market order

Short Entry (same as long but in opposite): After the first bearish Mean Renko candle closed (the candles before were bullish) => place a limitorder at 50% of the previous candle body. Delete limit order after current bar closed and order was not executed. Then wait for a new signal.

Exit: In this second after the first bullish candle closed.

General:

- Only one entry per bar allowed, maximum open trades can only be 1 due to strategy.
- This EA should also work in optimization mode
- This EA should work as fast as possible especially when closing orders to reduce danger of slippage

Parameters:

- Magic Number
- Comment
- Lots per 100 of Balance (f.e value 0.01 means use 0.01 lot for every 100 euro)
- Limitorder at % of previous candle body (default 50, I would like to choose between 50 and 70% using a dropdown menu)
- Takeprofit in Pips
