

## SCRIPT FOR CUSTOM WORK

The 4 circles are confirmation of alignment with price, trend, volume, vitality.

Left to right: TREND DIRECTION, TREND TIMING, TREND VOLUME, TREND VOLATILITY.

All four green circles signal a buyers trade idea confirmed or a strong trend on the higher timeframe vice versus for all red circle confirm sell Trade idea. If there is a mix of colors you should wait for alignment.

1. TREND DIRECTION:  
direction of price

2. TREND TIMING: trend  
momentum2

3. TREND VOLUME:  
volume

4. TREND VOLATILITY:  
Tells you if there is  
buyers (green), sellers  
(red) volatility, or  
yellow (no) volatility.

The Script we are creating will have functions. There are as below

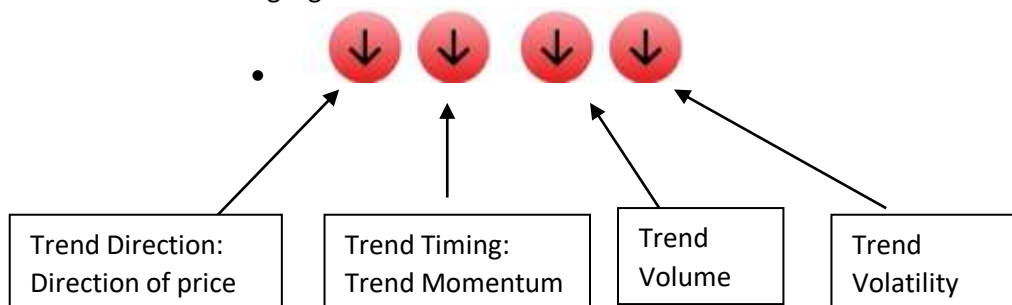

**Please code each function separately so I can turn on or off each function as an indicator**

**NB: All timeframes must comply, with all the functions I have mentioned.**

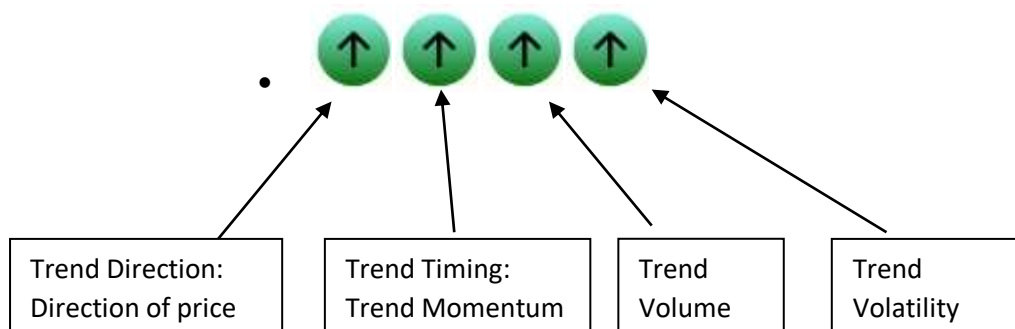

## SCRIPT FOR CUSTOM WORK

1. In the column/list created, the circles must all point in 1 direction if the pair that is being analyzed **has direction of Trend/Price, Trend Momentum, Trend Volume and Trend Volatility**. This can be in a buying or selling direction. If they are not moving in this direction, they should not show in the column/list being created. The circles must be made to appear as a signal in trading view chart for user to see what is happening with the pair.

Selling Signal direction based on the factors mentioned to be used

Buying Signal Direction based on the factors Mentioned to be used

Each circle represents the following from left to right (**direction of Trend/Price, Trend Momentum, Trend Volume and Trend Volatility**) NB: Refer to image on page 1 for details if needed

As I have explained above in the case of a pair below as an example for USDJPY

### Example for USDJPY

For usd jpy there is currently **direction of Trend moving upwards/ Trend Momentum is moving upwards, Trend Volume is moving upwards and Trend Volatility is also upwards.**

Now in this case, the signal will all appear green in the trading view chart

### Another example of USD JPY

In this case for usd jpy, there is a downward direction of Trend/Price, downwards Trend Momentum, downwards Trend Volume and downwards Trend Volatility. The signal that will now appear on the chart will be the reg signal as above

# SCRIPT FOR CUSTOM WORK

In the case where one of the factors mentioned (direction of Trend/Price, Trend Momentum, Trend Volume and Trend Volatility) The particular candle is represented by an amber colour.

Example is as below;

USD JPY

For this pair, there is (upwards direction of Trend/Price, upwards Trend Momentum, **NO Trend Volume or downwards trend instead of upwards** and upwards Trend Volatility). Because there is no volume the circle that represents trend volume is amber.

Example for USD JPY

For this pair, there is (upwards direction of Trend/Price, upwards Trend Momentum, upwards trend volume **and No or upwards Trend Volatility instead of downwards**). Because there is no volume the circle that represents trend volume is amber.

**The amber can appear at any time because market is dynamic and always changes. Therefore it is important to put the signal (4 circles) in the trading chart view so it's visible to user in real time.**

Once, there is a good line up (of the colours whether all red or all green), there should create an alert automatically with function of phone notification so I can be aware.

2. Once there is this alignment and confirmation of the factors above (**Direction of Trend/Price, Trend Momentum, Trend Volume and Trend Volatility**) all those pairs should show up into the column/list to created by the script. Note that the signal must appear on the chart in real time to enable the user know when there has been a change in any factor. When there is a change in any of the factors. The colour of the particular circle/arrow changes to yellow colour

**NOTE: The Code For this has been done in pine script, all you have to do now is convert to mt4 and add alerts that will ring once the indicators have displayed all yellow or all red. The alerts must be sent to mt4 connected on android by text or telegram.**

# SCRIPT FOR CUSTOM WORK

## Function/Indicator 2(Queen Candle)

When engulfing types of candles (**first candles Only**) are opening which are bigger than usual CANDLE Size (Not those with large wicks and tiny candles) for any indices, metals & Crypto pairs only(ETH,BTC,XRP Only) an alert should auto trigger and set alert for notification. The candle will

have a confirmation signal below it. The signal can be a 😊. Such candles should be of certain sizes as per below (Arrows Pointed). The only difference between buying and selling smiley icon will be the colours (Green for Buying and Red colour for Selling)

When there is a trend for 3 continuous candles as green below, a ✓ should be below the first candle. The only difference between buying and selling tick icon will be the colours (Green for Buying and Red colour for Selling)

# SCRIPT FOR CUSTOM WORK

## Function/Alert (Queen Candle Close)

Create a function that triggers an alert when a candle closes above/below a particular price. For example in the image below; I want Gold to trigger an alert above the close of this candle at 1797.466. The candle has 1 minute 17 seconds left to close. Therefore once the candle closes above 1797.466, the alert will sound immediately.

I should be able to set multiple alerts for close of candle for different pairs. So once the candle close above/below the candle, it will sound an alert immediately.

**Please connect the alerts of all indicators to be sent to mt4 on phone or to telegram bot.**
