

Pipfinite Breakout EA

I would need an EA based on this indicator:

<https://www.mql5.com/en/market/product/8418>

The developer sent me a certain file. If it is not working, then we skip this EA.

With the parameters of:

Period

Maximum History Bars

accessible through the EA.

Rules/*Parameters*:

--Stoploss above/below the signal candle

-*Breakeven*: If the trade reaches a certain amount of points

-Trailing: After Breakeven is performed, the trailing stop should kick in based of pip values and steps.

-News: Would be great if the EA stops a certain amount of time before High Impact News and continues after.

-Lot Size: Option for fixed lot size and based on Equity.

For Equity example: 1000 € → 0.01

2000 € → 0.02

-Filter:

01. Moving Average: Only take shorts/longs below/above a moving average with an adjustable period (true/false)

02. MACD: Only take shorts/longs if histogram is below/above the zero line (true/false)
