Name of EA : Short Gun Strategy

Overview of Automated Strategy Flow:

1. Check if there is any current Buy or Sell Position
   (Only Open 1 position at a time until Close Position)
2. Check current price
3. Check current Real Time Market Movement
   (Check it is a Long Movement with 2pips)
4. Initiate a Buy Position on Specified LotSize (Assume is Long Movement now)
   4.1. Specific StopLoss -5pips and TakeProfit 500pips   (**Completely Exit/Stop**, refer Step 7)
       (Means once after Open Position, can allow for 5 pips drop only)
   4.2. Follow continue Market Movement, Set 4 levels of moving StopLoss, 1 Take Profit
       (Assuming continuing Long Movement)
       1. Reach 1pips, StopLoss become at 1pips
       2. Reach 15pips, StopLoss become at 15pips
       3. Reach 25pips, StopLoss become at 25pips
       4. Reach 35pips, StopLoss become at 35pips
       (Assuming Long Movement continue after 35pips)
       5. Take Profit when drop with 5pips. (Assuming it reach +80pips, then drop 5pips become +75pips, execute TakeProfit)
       6. If market up enough to continue Long…. Then execute TakeProfit at initial (500pips)
5. Execute Vice Versa on Step 4, if Step 3 encounter a Short Movement.
6. Once Position Close, Repeat to Step 1.
7. If either Buy Position or Sell Position initiated, if continuously "Making Losses" at -5pips for 5 continuous trade. Then completely Exit/Stop the EA running.
