

MT5		
LOT machine, the aim is not to make big wins, small wins are enough. It is important to implement as many LOTs as possible.		
The spreads and swaps must be taken into account.		
variable	value	tip = That can be expanded, feel free to think along ;)
Main Settings	+----- Main Settings -----+	
trade direction	(long,short,longANDshort)	
magic ID	5555	
maximum Spread	12	
info on the chart	true/false	Infos on Chart: TraderName, Account, Broker, Recovery in €/\$, Lot since start, LOT, Pipdistance
comment	Text	
HardCut in %	25	
Lowest Price (LP)	1350	
point distance	manual / auto	
point distance manual	22	
point distance auto		
Lot	0.01	The idea is that at the lowest price there is a 25% capital loss, all SL are set there, then he calculates how large the pip distance may be for the specific lot.
Price per point for 1 Lot (PP)	1000	As an example, the DAX or US30 is different for each broker. Here you can enter what the value has.
Trade Time	+----- Trade Time -----+	
start Monday		
stop Monday		
start Tuesday		

stop Tuesday		
start Wednesday		
stop Wednesday		
start Thursday		
stop Thursday		
start Friday		
stop Friday		
close all trades in profit 1		close at X 17.00 close all trades that are in profit
close all trades in profit 2		close at X 18.00 close all trades that are in profit
GRID	+----- GRID -----+	
TP (point)		> TP = point + spread + swap + RP
Trail classic (point)		> trail start = point + spread + swap + RP
Trail % start		(Ts%) > trail start % = point + spread + swap + RP
% for Trail		example if (Ts%) 20 and (%forTrail) 25 __ now he is on entry +20 = he set SL at entry + 5 __ when go forward to 30 = SL now at 7,5
Recovery Point (RP)	2	
Start recovery when X open trades	10	if equal to or more than (X) trades are open he use (RP) In the example, 2 points per order are now provided as revcover. Once the (X) 2 are worth the trade that is most negative, he closes that trade that is negative.
PYRAMIDE (PY)	+----- PYRAMIDE -----+	It should be pyramided up if the trade is in the plus. The SL / TP should then always be drawn after a new trade.
Last trade open on PY	18:00	
Lot for PY	auto / manual	
use X trade for PY	4	Use every X trade for PY, the others run normally according to the grid without PY
Set next trade (point)	20	= point + spread + swap + RP
Set SL/TP at Breakeven + Xpoint	3	when more than one trade is open
set each trade +Xpoint	1
