

- 1) Night Mode & Day Mode (True or False)
- 1a) Profit Protection Start in \$ (True or False)
- 1b) Profit Protection in \$ (True or False)
- ( If in Profit, Profit is not STATIC, but **Dynamic**)
- 2) **Default** Profit Protection **5 Pips**, when in Profit of 25 Pips.
- 2a) Default Profit Protection **51**, WHEN in Profit of 65 Pips. Etc...
- 3) 5 digits: USDZAR, USDHUF, USDMXN, XAUUSD, etc
- 4) **News Mode (On or Off) USD, EUR, GBP, JPY, AUD, NZD, CAD, CHF, etc.)**
- 5) Keeping Profit Protected from NEWS SPIKE ?
- 5a) **If in Profit of \$ 5, or more sell before Any MAJOR NEWS (NEWS with HIGH IMPACT, NEWS in RED, FROM [www.forexfactory.com/calendar](http://www.forexfactory.com/calendar)) ( True or False)**
- 5b,) **Email me, a REMINDER of that NEWS, 1 hour: 15 minutes before the actual NEWS happen.** (True or False)

This is For MT4 TERMINAL

Here is WHAT I am looking for in a NIGHT mode. In that NIGHT mode, the first choice would be a DAY mode. And, the second mode would be a NIGHT Mode.

NIGHT Mode or DAY MODE (**True or False**)

Parameters for NIGHT mode:1

1a) **Target is 10 000 Pips away** from my entry point. However, when I am at 65 Pips in Profit, I would like to SECURE and LOCK 50 of these Pips from that 65 Pips. If the trade is going against me when it had reached 60 Pips, the system will exit me out before it goes down to 49 Pips. But, in case it doesn't REACH its objective of 335 Pips, I will still be in the trade.

1b) But, if the trade KEEPS on going up, Now the TRADE is at 85 Pips in Profit, instead of SECURING and PROTECTING 50 Pips, now I would like to PROTECT 70 Pips of that 85 Pips in PROFIT instead.

1c) But, if the trade causes me to have 100 Pips in Profit, now I would like to PROTECT and secure 85 of them.

1d) But, if I am in 115 Pips in Profit, now I would like to SECURE 100 of them. You get the idea. I Always want to HAVE an INCREMENTAL of 15 Pips and SECURE the difference. You will do this all the way to 5000 Pips away. Again, here we are on a Night mode and not on a Day mode.

125 = 110	140 = 125	155 = 140
170 = 155	185 = 170	185 = 170
200 = 185	215 = 200	230 = 215
245 = 230	260 = 245	275 = 260
290 = 275	305 = 290	320 = 305
335 = 320	350 = 335	365 = 350
Etc...	etc...	etc...

**This is the NIGHT mode.**

Now, here is the information for the Day mode

**Default Profit Protection is 5 Pips, when 35 Pips in Profit.**

2a) DAY mode:

**Target is 10 000 Pips away.** However, when I am in Profit of 75 Pips, I would like to protect and SECURE 50 Pips from that 75 Pips. But, if the trade goes ~~100~~ Pips, now I would like to SECURE & Protect 75 of that 100 Pips.

2b) But, if the trade goes to 125 Pips in Profit, now I would like to SECURE ~~100~~ of them. That has to go all the way to 6,000 Pips. I believe you got it now.

150 = 125	175 = 150	200 = 175
225 = 200	225 = 200	275 = 250
300 = 275	325 = 300 etc...	etc...

This goes with the DAY MODE.

From the input tab: Where it says, Profit Protection Start in Pips. I MUST have the Profit Protection Start in \$ as well. The same way, we have it in TP in \$ Amount. The same way, we have SL in \$ Amount.

The Profit Protection in Pips, MUST also be in \$ Amount as well. Instead of choosing Pips, we would choose a \$ Amount

Now, Under SL in \$ Amount, right under it: NIGHT Mode & Day Mode (here, select, either Day mode or Night Mode)

Regarding TP Line color (currently in BLUE) and SL Line color ( currently in RED): I would ALSO like to be able to drop and drag these two HORIZONTAL lines myself and be able to see the Potential Profit and Loss with the UNDERSTANDING the broker would not be able to see it on their OWN.

**It is VERY IMPORTANT that you send me the SKETCH to see how the lay out looks, so if there is any issues we can rectify it RIGHT AWAY.**

Whenever a trade reaches its Objective, I would like to RECEIVE an email that says DONE.

Also, let's say I purchase USDJPY at 150. I Purchase it again at 151. I purchase it again at 152. And, if I am looking to exit at 300 Pips away, **please MAKE SURE THAT ALL 3 TRADES ARE NOT CLOSED ALL AT THE SAME TIME.** Here, the one purchase at 150 will close first. Then the second one, then the third one.

I would like to have a minimum of TWO LEVELS OF PROFIT PROTECTION, we ALREADY have ONE done. The first one WOULD be, WHEN 25 Pips in Profit to protect and **SECURE 5 from that 25**

**Pips in Profit.** ( Night mode) (True or False)

Day mode when 35 Pips in Profit, now it will **SECURE and Protect 5 from that 35 Pips** ( Day Mode) (True or False)

I Would like to know, if you intend to SELL this EA to others as well, once it is all done ?

I would like to get a quote \$\$\$ from you for Updating this Ea., thanks.

I am open to any suggestions that you may have, or you may see fit.
