

Work of 145 \$.

Kindly only serious and experienced professional programmers in the MQL5 language.

- 1) Profit calculation for closing positions  
points a);...e)
- 2) Rebalancing positions (buy / sell )  
points f);...o)
- 3) Start time; End time  
points 3a;...3d;
- 4) Total profit / total loss / trailing balance

I'm available for any clarification and for any example.

We will analyze each point together. Will be indicated each point with example and indications.

The programmer must deliver the "source code" ( source code, of all demos and all finished work).

Before sending the "source code", please carefully check the perfect and complete integration with existing EA.

The EA they will send (for work) to the programmer works correctly in all its parts (inputs).

To the verify the work of the programmer, can only do it with "open markets". Can check in three days minimum of "open markets".

The programmer must verify that the work is fully integrated with all EA parameters, before delivering the work (real - time verification )

the programmer must deliver a job with a clean code. And give assistance even after the job done.

The programmer will test and record EA video (real – time demo) in action (at all work points). And demonstrate. And, via video must prove that there are any problems

EA must work in demo (real time), and in backtesting. And for real money.

EA must work in forex, cfd (indices and stock)- and futures (CME)

The EA (file mql) will be send to the programmer only after the milestone created: And after the programmer has accepted the milestone.

The deadline for the programmer's job will be doubled. For example, the programmer indicates 5 days for the execution and delivery of the work. I will give' 10 days.

If within 10 days the work is not delivered, the contract expires. I no longer have interest to continue the contract. And then is canceled
