

Operating rules of the “Ichimoku Cloud and Moving Average” Bot

**Ichimoku Cloud:** Tekan-sen 3 (red line), Kjun-sen 9 (black line), Senkou Span B 1 (purple cloud); Senkou Span A (orange cloud) ; Chikou Span (green line)

**MA 5** Smoothed Low (blue line)

### **General Strategy of the Bot. Synthetic Index “ Volatility 75 (1s) “ Time Frame: 1 Min**

The bot must operate in Scalping mode in a 1-minute period, it is required to open and close operations in seconds using the Ichimoku stocking crosses, risk management will be a dynamic stop loss "Trailing Stop" as the crosses go giving the stop loss will remain the point of the 5-period Moving Average when buying and 9-period Kjun-Sen when selling.

The robot should open and close short trades looking for 15 cents to 20 cents per trade. Opening and closing trades according to the trend.

The trend indicators will be Senkou Span A and Senkou Span B (Purple cloud and orange cloud) These clouds indicate the trends, whether it is buying or selling.

Senkou Span A = Sell  
Senkou Span B = Buy

### **Tickets**

#### **When to buy?**

Tekan-sen(3) crosses above Kijun-sen(9) will close the position at the Chikou Span level, only when Senkou Span B draws on the chart in a bullish position, stop loss placed at the position point of the MA(5) )

Ratio management per operation 1 : 0.15 ; For every dollar of risk managing 0.15 profit, profit is taken

**Purchase tracking.**

Tekan-sen (3) crosses over Kjun-Sen (9) opens a buy trade with the same management  
1: 0.15

**Exit from the market when it is for purchase.**

Stop Loss placed in the MA(5), The stop loss must be dynamic applying trailing stop when the MA(5) continues to rise

**When to sell?**

Tekan-sen(3) crosses below Kjun-sen(9) and Senkou Span A is trending and expanding the downtrend cloud.

---

**Sale tracking.**

Tekan-sen (3) crosses below the MA (5) opens a sale trade again.

### Exit from the market when it is for sale.

Stop Loss placed at the point of Kjun-sen(9) at the time of opening the sale, the Stop Loss is placed exactly where Kjun-sen(9) is

### Sell against trend

Only if you cross Kijun-sen(9) below the MA(5) by placing an SL at the last high; looking for Ratio of 1:0.50, for each dollar obtain 0.25 of benefit
