

Explaining error and fix needed here

1. fix time setting . (mange pending order)

When high news are coming the EA should start work he should open 2 pending orders one buy one sell and here we have 2 settings first the distance of the pending orders this work fine and the other is a time setting when the EA should place the pending orders and when he should delete the pending orders when nothing is happen! This time setting is not working maybe its because the API where he gets the news its do slow! I speak with many others all say investing.com has a fast connection

2 fix select the most impact news or recent one if both have same impact – pending order mange delete or add.

when the news are starting and one pending order is open as example the pending sell order is open then the other order buy pending order must be delete very quick (best same time then the sell order is open) because sometimes the news are coming fast (jumping) and then we have 2 orders open thats not good.

3 fix SL – slippage/ spread error

The SL must set only in the running trade not in the pending order because of slippage and spread the SL jumps over and is not working then.

4 recheck – working of sl and trailing sl . tp .

When the trade is running then he can move into the SL or when he move in our direction then he run in the TP or he is starting a trailing stop TP und trailing stop are working good in this EA

Here add New functions

1.The news Filter please from investing.com

2.Add max spread & max slippage true/false setting and below input filed in pips .

When i say as example max 5 pips spread and 10 pips slippage and we have more then the pending order should not open

3.Add breakeven true/false when the trade is some pips in Profit (also a setting for that where i can say how much pips until he should go for breakeven) breakeven should be 1 or 2 pips because of commissions.

4 Add display EA data & logo on chart as in pic attach .- EA has a other chart window i will give you a teamplate and i need a small data Window on the right site where the EA looks for daily gain and overall gain and also daily Drawdown and overall drawdown.
