I need ea for **mt5 paltform**

We compare close price for up candle to closed price of low candle and when close up candle is above open down candle then we open a long position. When close down candle is below open up candle we open sell position

Additional conditions:

1. Open only long, only short or both (i can send other indicatior where it is working)
   For both direction:
   the rule is that when ea opens a buy order, it can be closed on sl, tp or when a signal in the opposite direction occurs. if there is a buy signal and then after a few candles there is a buy signal again, it is ignored. we wait until a sell signal appears. then the order should be reversed. that is, the buy order is closed and a sell order is opened.

   for long direction
   the rule is that when ea opens a buy order, it can be closed on sl, tp or when a signal in the opposite direction occurs. if there is a buy signal and then after a few candles there is a buy signal again, it is ignored. we wait until a sell signal appears. then the order is closed and a sell order is not opened. we wait for another buy signal.

   for short direction
   the rule is that when ea opens a sell order, it can be closed on sl, tp or when a signal in the opposite direction occurs. if there is a sell signal and then after a few candles there is a sell signal again, it is ignored. we wait until a buy signal appears. then the order is closed and a sell order is not opened. we wait for another sell signal.

2. Time range when ea can open trades x2, i mean 2 ranges, for example 8.00-10.00 and 14.00-18.00. with true/false to turn on ort urn off it

Use Time Filter	
UseTimeFilter	true
TimeFrame 1	
Start	00:01
End	08:00
TimeFrame 2	
Start	14:01
End	20:00

3. Define as parameter how many candles can break signal candle

4. Manage by ea trades opened manualy
   the point is that when I open an order manually, I want EA to treat this order as its own and when a signal to close appears, it will close this order.
5. Lot size, stop loss, take profit as distance, magic numer
6. Push alarm sending to mobile phone
7. There can be open only one trade at one moment even i open trade manually

I get this ea from current programmer but this ea is not working well. I dont know why it does not open trade when signal occured. does It need time to reflection whether it should open trade. And sometimes it avoid signals. I tested it in strategy tester and there it is working quote well but on real chart it works week
