

1. Change: If the Distance from Green Line to Arrow (end of candle / beginn next Candle) is more then XX.X Pips, NO order ist to SET... (Please with True/False)
2. Change:

IN THIS CASE, All order will be Closed if Balance is  $\geq 0$ .

if more signal is coming to set a order (in this example Buy) then is the factor the OLD factor  
example:

Factor = 1,2

changing\_faktor = 2

1. Sell Order: 0,1
2. sell order 0,12
3. Sell Order 0,14
4. Buy Order =  $(0,1+0,12+0,14) \times 2 = 0,36$
5. Buy Order (if signal comes) =  $0,36 \times 1,2$  (old factor) = 0,43
- 6.7.8.9. Order and so on... BUT because i have in this construct a „direction-Change“, so all oder have to Close if Balance  $\geq 0$

Changing Faktor please also with „TRUE/FALSE“

3. Change:  
IF more then 3 Order is Open in same direction (example: 1. order sell , 2. order sell 3. order sell) Trailing will be activated.  
Trailing Level : ZeroBalanceLevel + X Pips (zeroBalanceLevel means the point where the Balance of the 3 open orders is 0)
