

CRT EA

STRATEGY RULES

- User input time based session for the high and low, if the price crosses the high first use that as bias for the day.(the blue box in the image above)
- If the low is crosses first use that as bias for the day as well.
- Use 3 standard deviation for entries, first entry when the low or high is crossed.
- 1 standard deviation is measure from high to low or low to high, just distance of the session.
- Stop loss is 3 standard deviation and take profit is 1 standard deviation for first trade.
- Second trade is placed when price crosses the 2nd standard deviation, lot size is the same as the first trade, stop loss and take profit is the same as first trade.
- 3rd trade is the last trade for the day, stop loss and take profit is the same as first trade. Lot size is the same as well.
- If the first trade take profit, stop trading for the day. If the second one and first trade hit take profit, stop trading also.
- All trades must have stop loss and take profit placed when the triggered.

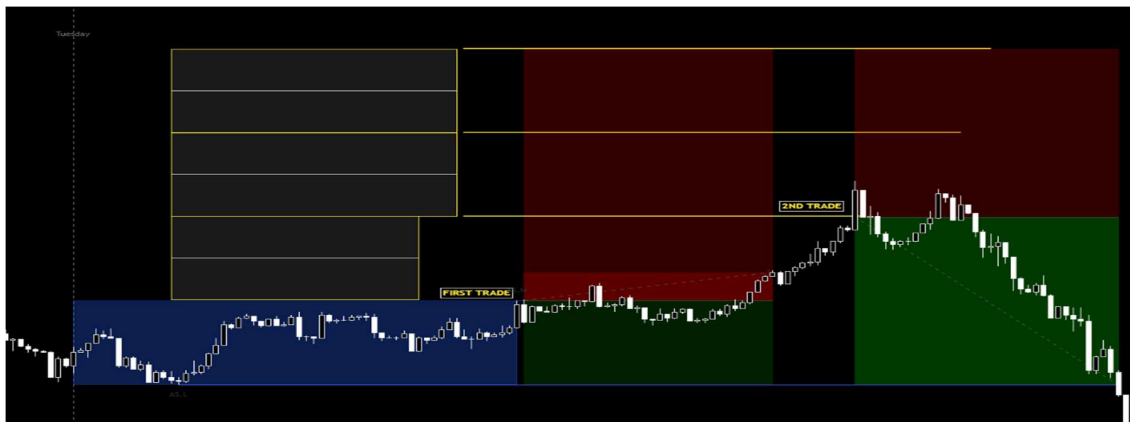

MONEY MANAGEMENT

- Need option to manage risk by currency value (like risking 100 USD or 500 USD), USER INPUT
- Stop loss to be based on take profit. If take profit is 1R than first trade should have stop loss that is 3 times the take profit.
- Use the same lot size used to on first trade to place second trade and 3rd trades if required.

EXAMPLES OF TRADES

- Only one trade on this day, once take profit is hit. Cancel 2nd and 3rd trade for the day.

- Example above two trades were triggered and take profit. Cancel 3rd trade after take profit is triggered.

- Two trades above triggered

- Example above is of 3 trades triggered and went to take profit. All 3 trades should have same stop loss and same take profit.

- Example of losing day, all 3 trades should close at the same level. Stop trading for the day after losing the 3 trades.
