# Suggested features and layout of trade management terminal (TMT)

Current Status

I use the mini terminal by FXBlue to place and size order.

Right click on the lots block will open a trade size calculator:

It does the job of position sizing well but require another window. I would like it in the same panel. I need trade size calculator with only:

Input: SL/TP(pips) , Fixed cash risk → lots size

Preferably TMT Panel is can be attached to each open chart and sync to its instrument. As it works with mini terminal.

Note about instruments: I primarily need it for currencies but would also like to use it for other instruments offered by my broker such as indices.

In the attached example once I apply the mini terminal to EURCAD then it automatically recognize it.

If the size of my requested TMT is too big to fit on the chart (hopefully not) then it should be possible to detach and I would need a way to make sure the TMT currency is the same as the chart I am working on to avoid mistakes. Possibly drop down mane of the TMT t choose instrument?!
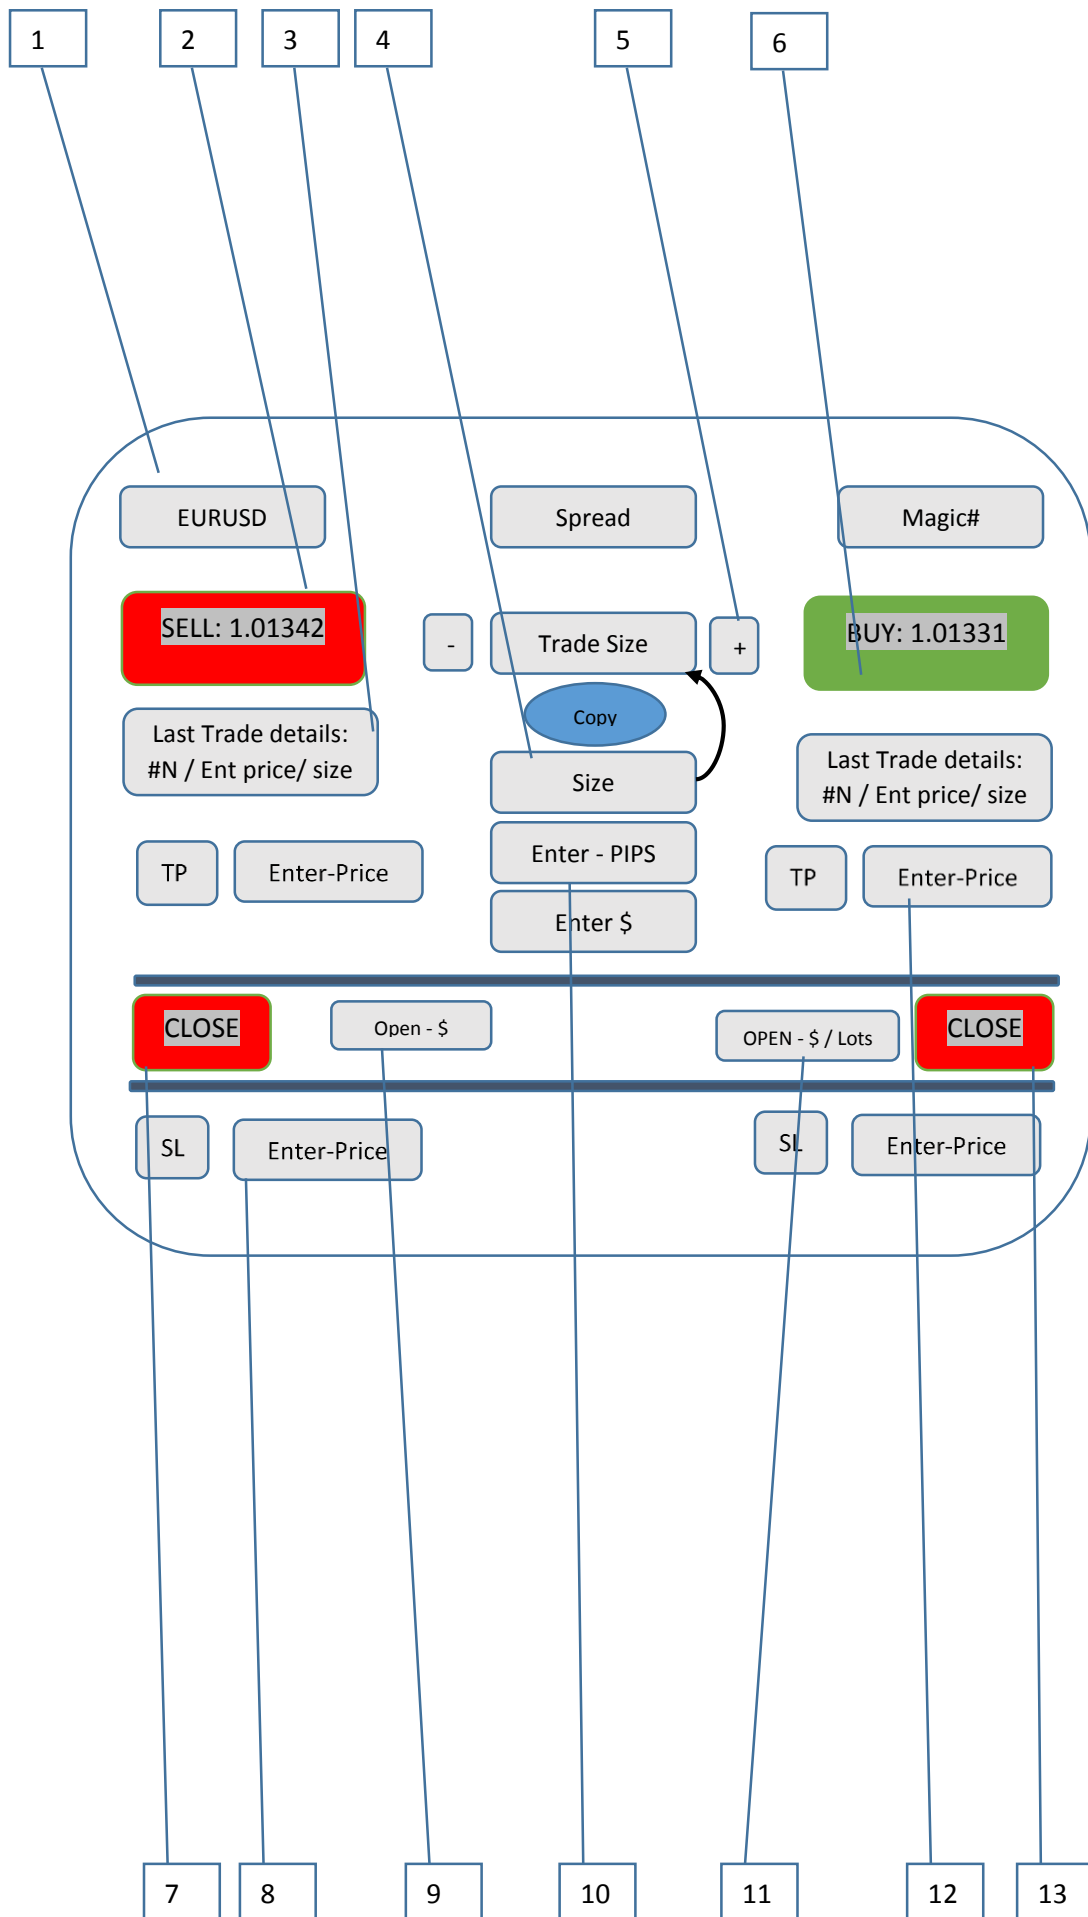

What I would like also to add to this panel is:

1 – Ability to apply fixed price SL/TP to all long or all short position

2 – Apply magic # to new trades

3 – Close all long / close all short

 Additional Information to be shown:

1 – Total $ value of all long / all short.

2 – Total LOTS of all long / all short.

3 – Nice to have : "what if scenario" : Assuming I have several positions on long (or short) and at the current price is XXX. I want to be able to write price and get the overall of all long (or short) position value if the price reach this price mark.

See below a possible layout of the TMT. Hopefully my drawings are not confusing and if there are alternative ideas I am happy to hear.

1. Indicate the instrument if the TMT is attached to a chart or be able to choose from drop down menu if it is detached
2. The BUY/SELL buttons should have more presence. Colour applied. And price appearing on them
3. Last trade details should show:
   a. #N = if there are 5 open trades, in the same direction, the it should show #5. If there are 2 open trades in the same direction it should show #2
   b. Entry price = should show entry price on the last trade
   c. Size = should show lot size of the last trade and the total lot size on this direction. For example, if there are 5 long trades with total of 0.85 LOTS and the last one is 0.15 LOTS then it should show 0.15/0.85
   d. This info box should look like: | #7 | | 1.15321 | | 0.15/0.85 |
4. Position Size: this is a calculation based on the 2 details entered below. PIPS and $
5. Trade size can be entered / changed in 3 ways:
   a. Manually.
   b. Copied from position size calculator (item 4)
   c. Adjust its size in micro lots with +/-
6. BUY – same as item 2 should represent quotes coming from the broker servers.
7. Close ALL = this button should close all short trades
8. Set SL ALL = manual entry of price and SL button should set same SL value to all short trades. Same thing on the right hand side for the long.
9. Total $ value of all short trades
10. Position Size calculation: 2 boxes to enter PIPS and $
11. Same as 9 but for all long
12. Set TP ALL = same as 8 this should allow to set fixed price TP value to all long trades and on the left to all short trades
13. Close ALL = This button should close all long positions
