Platform FIX API

The platform should work with Lmax/Darwinex Broker.

Platform Layout :

We have Clock with time of the Computer.
We have feeds with Sell/Buy Values and Currency
Close All Button
4 buttons : Buy1-Buy2-Sell1-Sell2
On Currecy field we have an arrow to select the currency to display
Setup Button

TIMER

4 Timer are for Close All function
Close all means that at that time all the position opened (if any) will be closed.

STRATEGY PARAMETERS (4 pages)

Time. Example : 12:23:45 GBPUSD (Feed will display this currency and Buy/Sell
will open that currency)
Time Lock. Example : 12:23:45
STRATEGY1
Lots : (quantity in lots)
Market or Limit Order
Limit (in pips)
Single Target OR 2 Targets
Target1 : X pips – Seconds
Target 2 : X pips – Seconds
(position will be closed after pips target reached OR after time is finished)

Stop1 : X pips Immediate
Stop2: X pips after X seconds
Stop3: X pips after X seconds
(this is just stop loss movements after x seconds)
(all values can be also " blank "

STRATEGY2
Lots : (quantity in lots)
Market or Limit Order (IOC or FOK)
Limit (in pips)
Single Target OR 2 Targets
Target1 : X pips – Seconds
Target 2 : X pips – Seconds
(position will be closed after pips target reached OR after time is finished)

Stop1 : X pips Immediate

Stop2: X pips after X seconds
Stop3: X pips after X seconds
(this is just stop loss movements after x seconds)
(all values can be also " blank "

Limit in pips :
Example : Eurusd is 1.1240 and we buy with Limit of 5 pips, platform will buy
with an IOC Limit order of 1.1245.
Time Lock means that we " freeze " the value of the currency at that time and use that
value as reference for the Limit Ioc Order.
