

The **ONLY** Forex
system you'll ever need

**20
UP**

The text '20 UP' is rendered in large, 3D, metallic blue letters with a brushed metal texture. A jagged red line, resembling a stock market line graph, is drawn across the letters. The background of the cover features stacks of US dollar bills and red arrows pointing upwards.

UP OR DOWN

*'Make over \$100,000 in
the first 60 trading days'*

20 Up, Up or Down

Thank you for purchasing my system, and I hope that you will soon be on your way to implementing it with success.

The system is very simple, hence the length of this document. There's no need to sell the system to you any more, since you already own it, so here we go.

First of all, you will require an account with IG Markets (or IG Index if you are in the UK) to implement this system as they are one very few brokers this system will work with.

Open an account at www.igmarkets.com or www.igindex.co.uk if you are in the UK by following the instructions in the "Apply for an account" section. This shouldn't take long, and you should be able to fund the account pretty much straight away. The two websites are essentially the same, apart from that using IG Index in the UK will allow you to avoid any Income Tax.

The minimum I would recommend funding your account with is £200, since you can trade a minimum of £1 per point, and you need to have a deposit to cover the maximum potential loss of any trade you place. However, if you can afford it, you COULD start with a higher bank, and go for the higher earnings straight away, or just have it to ensure that you are able to take a few losses in a row if they occur. If you are using IG Markets, you will not be able to place trades in cash amounts, but will have to convert into "contracts", starting with the minimum of 0.2 contracts per point at the beginning.

On to the actual system - I have been trading the USD/JPY pair for longer, but have recently discovered that this system works almost as well with the EUR/GBP pair. I am sure there are also other pairs with which this system will work, but I will leave you to find these and examine the ones with the most potential. For the purpose of this tutorial I will be using the USD/JPY pair.

To find the market you will be trading go to the search window in the home page once you are logged in and type "USD/JPY" and click search.

Your search will return all the USD/JPY markets on which you can deal with IG Index. The usual spot market is there, but we are interested in the USD/JPY Binary FX. This is "USD/JPY up (>open of the day)". It is called binary because every day it will close at either 0 or 100,

and nothing else. It is based on the activity of the USD/JPY forex pair and other factors such as time are also taken into account.

The following results should appear.

| Market | Period | Sell | Buy | Change | % Chg | Update | High | Low |
|--------------------------|-----------|--------|--------|--------|-------|----------|--------|--------|
| Spot FX (mini) USD/JPY | - | 95.830 | 95.860 | -0.431 | -0.45 | 14:09:18 | 96.325 | 95.775 |
| Spot FX USD/JPY | - | 95.830 | 95.860 | -0.431 | -0.45 | 14:09:18 | 96.325 | 95.775 |
| USD/JPY to be above 9480 | 22-JUN-09 | 96.0 | 100.0 | 9584.5 | - | 11:10:06 | 100.0 | 0.0 |
| USD/JPY to be above 9520 | 22-JUN-09 | 90.1 | 94.6 | 9584.5 | - | 14:09:18 | 100.0 | 0.0 |
| USD/JPY to be above 9540 | 22-JUN-09 | 81.3 | 86.2 | 9584.5 | - | 14:09:18 | 100.0 | 0.0 |
| USD/JPY to be above 9560 | 22-JUN-09 | 67.7 | 73.4 | 9584.5 | - | 14:09:18 | 100.0 | 0.0 |
| USD/JPY to be above 9580 | 22-JUN-09 | 50.5 | 57.3 | 9584.5 | - | 14:09:18 | 100.0 | 0.0 |
| USD/JPY to be above 9600 | 22-JUN-09 | 33.4 | 39.6 | 9584.5 | - | 14:09:18 | 100.0 | 0.0 |
| USD/JPY to be above 9620 | 22-JUN-09 | 18.9 | 24.2 | 9584.5 | - | 14:09:18 | 100.0 | 0.0 |
| USD/JPY to be above 9640 | 22-JUN-09 | 8.7 | 13.3 | 9584.5 | - | 14:09:18 | 100.0 | 0.0 |
| USD/JPY to be above 9660 | 22-JUN-09 | 2.6 | 6.9 | 9584.5 | - | 14:09:18 | 100.0 | 0.0 |
| USD/JPY to be above 9700 | 22-JUN-09 | 0.0 | 4.0 | 9584.5 | - | 13:31:39 | 100.0 | 0.0 |
| USD/JPY to be above 9740 | 22-JUN-09 | 0.0 | 4.0 | 9584.5 | - | 08:51:24 | 100.0 | 0.0 |
| USD/JPY down (<9601) | 22-JUN-09 | 61.2 | 67.4 | 9584.5 | - | 14:09:18 | 100.0 | 0.0 |
| USD/JPY up (>9601) | 22-JUN-09 | 32.6 | 38.8 | 9584.5 | - | 14:09:18 | 100.0 | 0.0 |

If you do not have a search box you will find the required market under **Binary FX > Daily Up/Down / Ladders > Up/Down > USD/JPY up (>open of the day)**.

The Spot FX show how many pips that currency pair has moved up or down during that day, and the bottom two allow you to trade on the likelihood of the pair closing up or down on that day. The “USD/JPY up (>open of the day)” is the market we want. “USD/JPY down (>open of the day)” is simply a mirror image of “USD/JPY up (>open of the day)” and so it does not really matter which one you use as you will achieve exactly the same results.

To bring up the chart for the market click on the “Quick Chart” icon next to the market, and the following chart should appear.

To make the chart easier to read for our purposes, start by changing “1 Minute” in the bottom right hand corner to “15 Minutes”. Also, you may find the chart more intuitive if you go to “Settings”, and then change the “Style” to “Candle Stick”.

Watching this chart daily, you notice that it will go over 80 or below 20 everyday, and very often continue in the same direction to close at either 100 or 0, at 20:00 GMT, a move of 20 points. This is what the system is based on; we will be looking to exploit this for the 20 points every day.

So here is what you do – watch the market for when it approaches either the 80 or 20 level. This can be any time of the day depending on the market condition, but rarely any earlier than 07:00 GMT. So get up in the morning and watch the market, if it is nowhere near either of those two levels then just give it time and come back to it later. To prepare your order, click on the market you are watching (i.e. USD/JPY up (>open of the day)) and an order ticket will come up.

The ticket shown is from IG Markets, UK users will simply enter a cash value equivalent to 1% of your balance.

For everyone else, in the “Contracts” box enter the value of (¥1,000) contracts you would like to BUY or SELL, then as soon as the market you are watching hits 80 or 20, hit BUY or SELL respectively.

| Ticket | |
|-------------------------------------|--------------------|
| USD/JPY up (>9601) (22-JUN-09) | |
| Contracts | Sell 32.4 Buy 38.5 |
| (Min: 0.2) | |
| Currency | JPY |
| <input type="checkbox"/> Force Open | |
| Deposit Requirements | |
| JPY | - |
| GBP | - |

If the **market hits 80**, enter your contract value and **ENTER THE TRADE – hit BUY**.

If the **market hits 20**, enter your contract value and **ENTER THE TRADE – hit SELL**.

The value of contracts you will be trading depends on your bank, and to achieve the returns I quoted before you will be trading your BANK divided by 630. So a bank of £200 divided by 630 is 0.32 – and this is the number of contracts you will be trading. If you are using IG Index, you will simply need to enter the bet per point, which will be 1% of your balance, i.e. £2 in this case. Obviously as your bank increases, the value of each trade will increase, meaning that at the beginning the value of your trades will be relatively small.

Please note that there has been some confusion in this area – The binary is not an indicator which you use to trade the spot USD/JPY the, USD/JPY Binary is what you are trading when you use the ticket above.

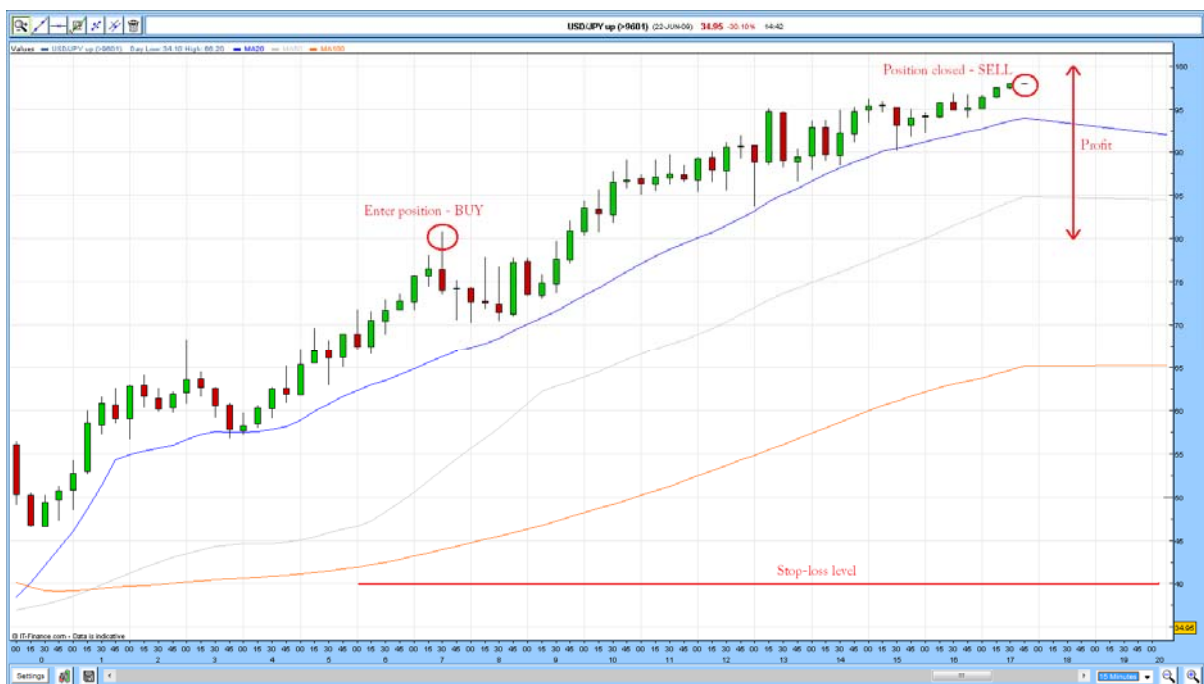

Unfortunately, these orders do not allow you to place a stop loss, or take profit limit and so you have to watch the market until you exit the position.

Now that you have your open position, you are waiting for a profit of 20 points. The Binary FX market on IG Markets closes at 20:00 GMT, at either 100 or 0 and at this time if you have an open position it will be automatically closed and the winnings added to your balance.

Of course, no system is perfect, and so you will sometimes have to close your positions at a loss. The risk for these trades is 40 points – so if you enter a BUY position, your stop loss will be at the 40 level, and if you enter a SELL position, your stop loss will be at the 60 level. To close the trade you simply click on the market you are trading in the “Open Positions” box and click in the opposite direction to your original trade.

You will be trading only when either the 20 or 80 levels are hit for the first time during the day. If your stop loss is hit, or if you miss the first opportunity of the day, there will be another one as the market always has to pass either 80 or 20 before closing. It is up to you if you take these trades. I personally don't as it may mean that it is a particularly volatile day, and so that is not part of my system.

So on an average day, your chart should look something like the one below, I have shown the levels of importance.

To summarize:

- 1- Enter a trade when either the 80 (BUY) or 20 (SELL) levels are hit.
- 2- Keep an eye out on the chart until 20:00 GMT at which point it will hopefully automatically close at a 20 point profit.
- 3- If the trade goes in the opposite direction to your entry – close the trade after 40 points.

An important piece of advice: **DO NOT LEAVE THE POSITION OPEN** if you are not watching the market. Quite often the market will be just 3 pips away from the close (i.e. 97 or 3) a good few hours before 20:00 GMT and so you can close your position there if you don't want to keep watching it. Due to the fact that you cannot place automatic stop-losses the market may reverse and you would lose 80 pips if you are not there to limit it yourself.

One final thing, to give you some confidence in the system, open up the "USD/JPY Up (>open of the day) chart and change the time frame to 1 hour. This will give you access to 20 days worth of data – you can go through it and see for yourself how many of those days contained winning trades.

Good Luck!

CDFs, Spread Betting and Forex are high leveraged products, can be very volatile and prices may move more rapidly against you. Only speculate with money you can afford you lose as you may lose more than your initial deposit. Hence trading these products may not be suitable for everyone, so please ensure that you fully understand the risks involved. You expressly agree that any use of the material contained within this document is entirely at your own risk.
