

META TRADER MT4 USERS

First be sure to read the other PDF to give you a general idea of how the system works.

If you are running the metatrader MT4 platform then a separate folder called metatrader contains an indicator that draws the trade box automatically for you and a template. Also a trade manager is included that enters the stop loss, take profit and moves to break even for you after the pending order is opened.

To install navigate to the directory where your metatrader is installed.

Drag or copy and paste the sureforexmanager.ex4 into your experts folder, sureforexbox.ex4 file to the experts/indicators folder and the sureforextemplate.tpl file to the templates folder. Start your trading software and open a 15min GBPUSD window, right click and open the “sure forex System” template. Make sure “live trading” is enabled under the “common tab”

Note: If you are trading with a five digit broker, such as Alpari UK use the 5 files.

**DEMO TRADE FIRST TO MAKE SURE THE SETTINGS ARE
CORRECT FOR YOUR BROKER**

IMPORTANT: The sureforexbox indicator is set by default to “periodBegin 6.00”, and “periodEnd 08:00” this is for a Broker with GMT +2. If you broker is GMT +1 then set “periodBegin 05:00”. And “periodEnd” 07:00. Make sure that “BoxEnd” matches “periodEnd”.

The Trading Rules are in a text box on the template. Please see the image below.

SET YOUR PENDING ORDER AT THE OUTSIDE OF THE BLUE BOX

Note: Once you place the pending order it is good till 06:00gmt

the next day. If you have any questions email support at info@forex-breakout.com
