

Exit on Friday

Open the four charts for each currency pair and select the H1 time frame. Place the robot on the chart insert file: Predator_Friday_Close_MT5.set, and then assign it a unique magic number for each instance below.

The screenshot shows the 'Predator 1.19' settings window with the 'Inputs' tab selected. The window contains a table of variables and their values. A red arrow points to the 'Exit On Friday' section, specifically the 'Activate' checkbox which is checked.

Variable	Value
Money Management	
1/2 Fixed Lot Size	0.01
Exit Rules	
1/2 Take Profit	3.5
1/2 Stop Loss	5.5
01 ATR(14)(coef)	14
Trailing Stop Rules	
1/2 Trailing Stop	0
1/2 Trailing Step	1
01 Stop ATR(14)(coef)	5
01 Step ATR(14)(coef)	6
Break-Even Stop Rules	
1/2 BreakEven Stop	1
1/2 BreakEven Step	1
01 Stop ATR(14)(coef)	3
01 Step ATR(14)(coef)	2

List of Currency Pairs ranked by performance. The first is the best, and so on

- XAUUSD (magic number = 1)
- AUDUSD (magic number = 2)
- EURUSD (magic number = 3)
- USDMXN (magic number = 4)

This implies that all market orders will be closed, regardless of whether they are profitable or not. Positions can be closed based on some exit rules (tp, sl...), or based on exit signal rules before Friday. But what is certain, all positions will be closed at 20:40 PM

Exit at the end of day

Open three distinct charts for each currency pair and select the H1 time frame. Place the robot on the chart insert file: Predator_Day_Close_MT5.set, and then assign it a unique magic number for each instance below.

The screenshot shows the 'Predator 1.19' configuration window with the 'Inputs' tab selected. The window contains a table of variables and their values. A red arrow points to the 'Exit At End Of Day' section, specifically the 'Activate' checkbox which is checked.

Variable	Value

List of Currency Pairs ranked by performance.

- XAUUSD (magic number = 5)
- AUDUSD (magic number = 6)
- USDCHF (magic number = 7)

If you choose this option, it means that at the appropriate time on the same day, all positions will be closed, regardless of whether they are profitable or not.

No time exit

Insert any of sets, and false Exit on Friday , and false Exit At The End of Day options.

Variable	Value
Money Management

List of Currency Pairs ranked by performance.

- EURCAD (magic number = 8)
- AUDUSD (magic number = 9)

In this scenario, all time options are untrue, i.e., disabled. This implies that positions will be closed according to exit rules such as TP (Take Profit), SL (Stop Loss), TS (Trailing Stop), or BE (Break Even), or in accordance with Exit signal rules.

Can I use the robot on all nine independent charts?

The answer is **YES**.
