

INSTALLING AND CONFIGURING THE ADVISOR

1. Open 2 XAUUSD charts and two XAUEUR charts, M15 timeframe

2. Next, you need to determine the GMT shift of your broker and download the corresponding set files. By default, the advisor is set to GMT+2 and DST true. DST means that the advisor will automatically shift the time by one hour during the summer. This setup is used by most brokers, such as IC MARKETS, ALPARI, ROBOFOREX and others. If your broker uses GMT+2 in winter, and GMT+3 in summer, then the advisor settings will have the following:

GMT - 2
DST is true

If your broker does not use daylight saving time, and he has the same GMT all year round, for example +1, then you need to make an adjustment and then the settings will be as follows:

GMT - 1

DST - false (DST is disabled because your broker does not use daylight saving time).

If you have any difficulties determining and setting up the GMT, then do not hesitate to contact me directly, I will definitely help you.

So, we have identified the GMT broker, and then we need to download the set files on the page with the golden cyborg ad.

But there is one more important point!

On the XAU instrument, some brokers use 2 digits and three decimal places.

And the settings for such brokers will be different

Two decimal places

	2214.10
	2212.20
	2210.30

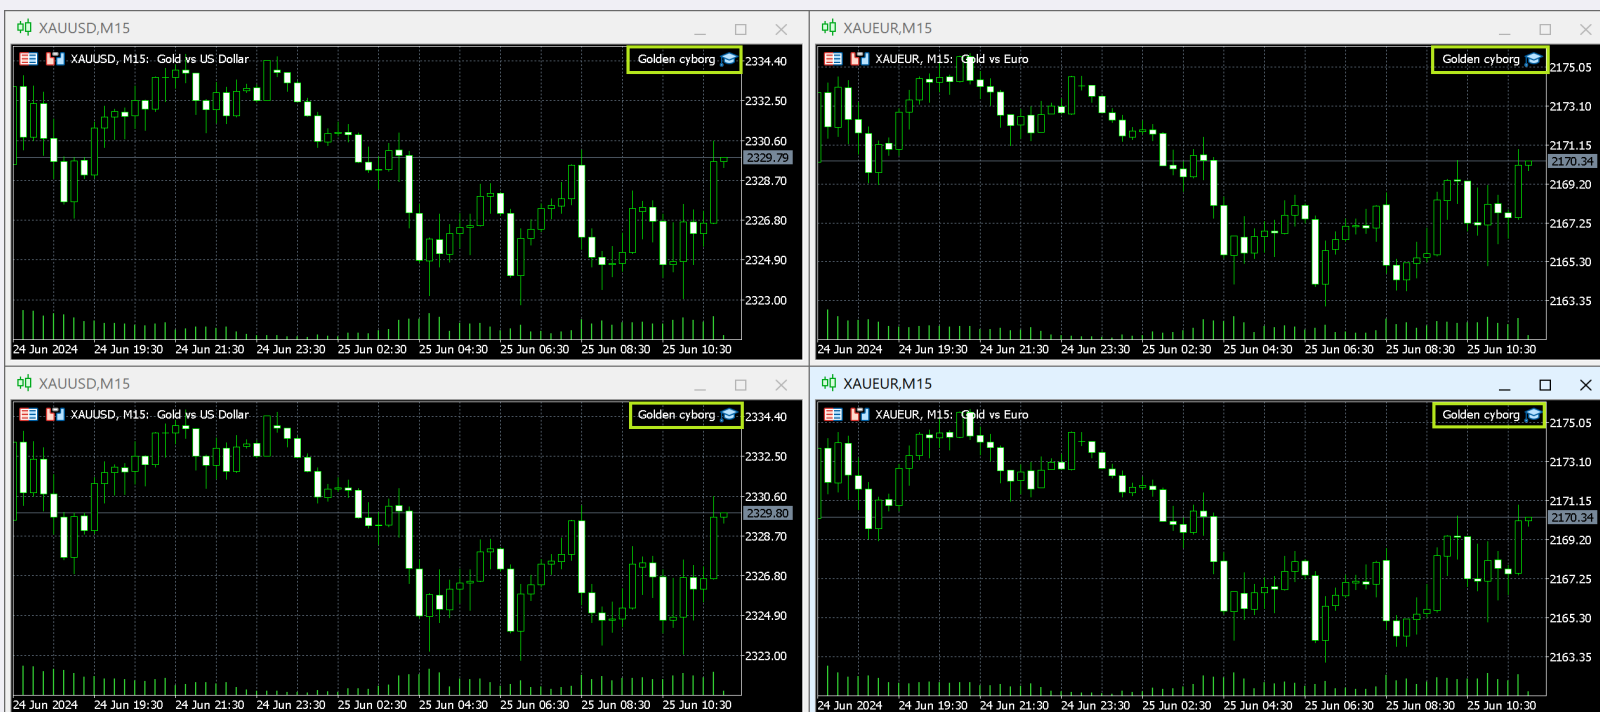

[Download set files](#)

Three decimal places

	2212.440
	2210.530
	2208.620

[Download set files](#)

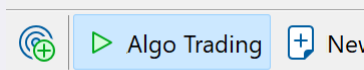

3. Attach the advisor to all four charts

4. Load the “XAUEUR SELL” set file onto one XAUEUR chart, and load the “XAUEUR BUY” set file onto the second XAUEUR chart.

For the XAUUSD currency pair we do everything similarly.

5. Click the “auto trading” button in the terminal and at this stage the setup is completely completed.

MONITORING AND TEST RESULTS

You can view detailed trading results on the myfxbook website using the link below

<https://www.myfxbook.com/members/Aparu1209/golden-cyborg/10968810>

During the week, the robot opened 5 trades and closed them with a good profit of +41%

Detailed test results can be downloaded below:
