After Purchase

Thank you for your decision to buy my product!

Right after you purchase the system, simply activate it on your Metatrader 4 or 5 platform, depending on what version you bought.

To do that, you first need to log in to your mql5 account on the Metatrader platform. After doing that, navigate to «Market» in the terminal window. Now you should see a tab saying «Purchased». Navigate to that window and download the EA.

The screenshot displays the MetaTrader 4 (MT4) platform interface. The top section shows a chart for the Stochastic oscillator (Stoch(5,3,3)) with values 68.9935 and 56.5193. Below the chart is a list of currency pairs: USDJPY,M15, EURGBP,M15, GBPUSD,M15, USDCHE,M15, and USDCAD,M15. The 'Terminal' window is open, showing a list of Expert Advisors (EAs) available for purchase. The 'Purchased' tab is highlighted in red, indicating that the user has successfully purchased the EA. The 'Market' tab is also highlighted in red, showing the list of EAs. The EAs listed include:

EA Name	Author	Price
Tight Scalper	Murat Ceterez	1950.00
ABlackBoxSel...	Olivier Nomblot	1050.00
Pro Pips	Sergey Rozhnov	599.00
FOREXSTAY LIGHT	SAAD ELDIN AHME...	2000.00
Adaptive Scal...	arief adianto	1599.00
MicroBOT	Jan Tarnogrocki	799.00
PipFinite Tren...	Karlo Wilson Vendiola	88.00
SFE Price Action	Joel Juanpere	1800.00
Loss Recovery...	Michalis Phylactou	159.99

The bottom status bar shows the current time as 2015.07.02 05:00, and the account balance as 1.56017. The 'Market' tab is highlighted in red, and the 'Purchased' tab is also highlighted in red.

On the left-hand side of your window, you will find the «Navigator» panel, where you can see your Account, Indicators and Expert Advisors. All of which are dropdown menus.

The downloaded Dax Breakout System is listed under the «Market» in the «Expert Advisors» dropdown list.

Settings

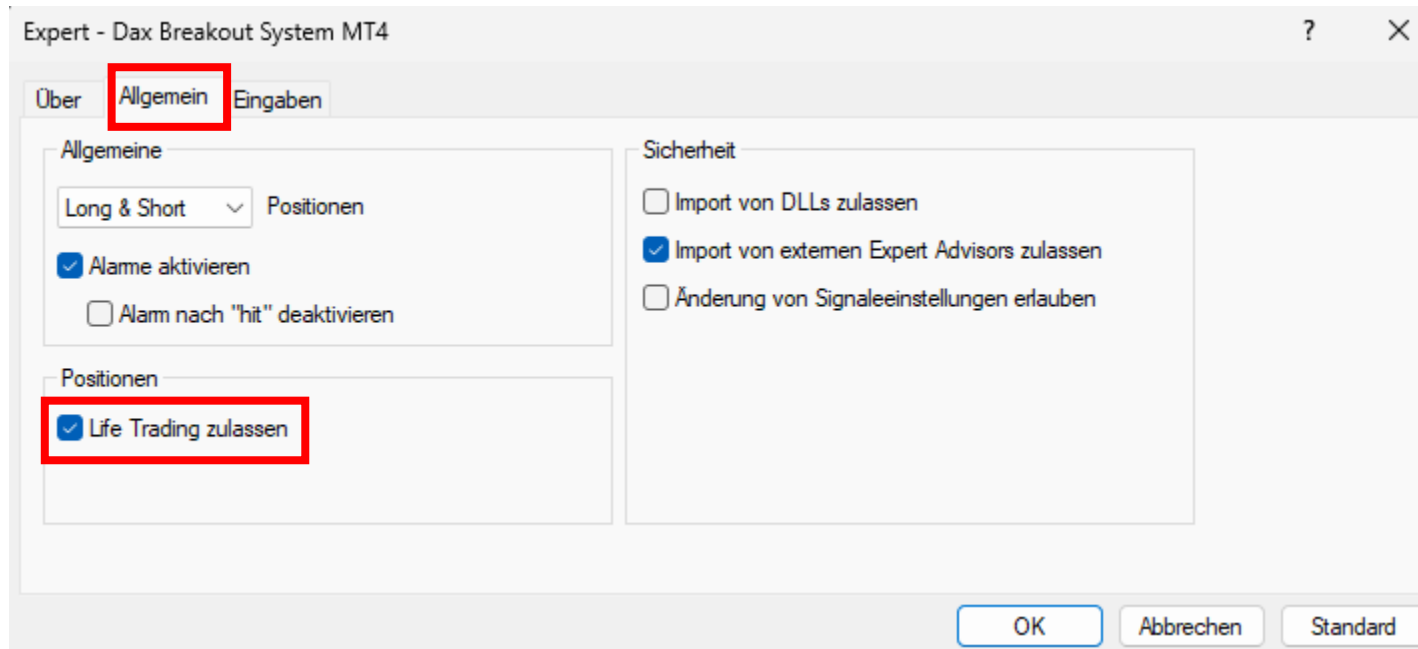

After downloading the EA, allow the terminal to execute trades automatically.

Now simply drag and drop the EA on your DAX M1 Chart.

A window will pop up with all the different settings.

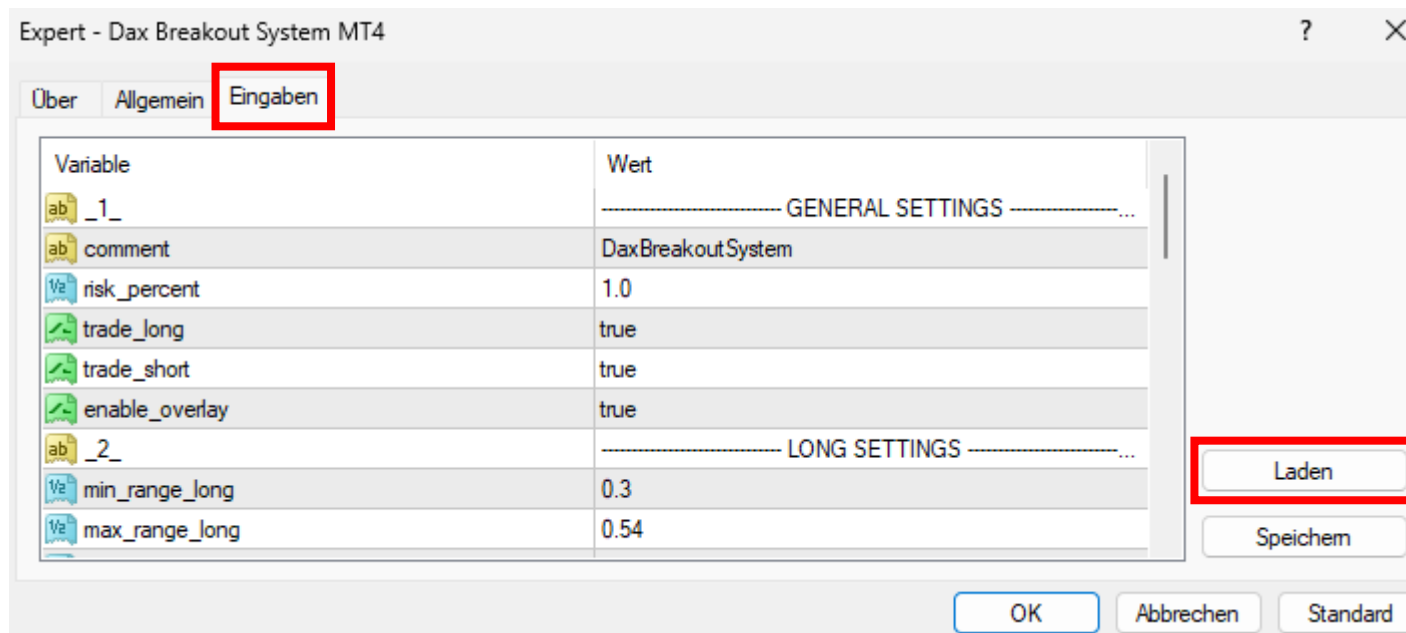

In the «General» tab, make sure to check the box «allow live trading», if it's not already checked.

To make your work easier, I provide presets, ready to be downloaded.

You can find them in the Expert Advisor's description on mql5. To load the setfiles, click the button «Load».

You can now browse in windows explorer and double click on the setfile you'd like.

Be aware of the time settings. The EA trades and looks for the range based on the server time. You find the server time on the top left of your screen, where it says «market watch».

The basic setting for the range time is GMT+0, 07:00h – 07:59h. If your broker is located in for example GMT+2, the right setting would be 09:00h-09:59h.

The screenshot displays the MetaTrader 4 software interface. At the top, a menu bar includes 'Datei', 'Ansicht', 'Einfügen', 'Chartfunktionen', 'Extras', and 'Fenster'. Below the menu is a toolbar with various icons. A red rectangle highlights the 'Marktübersicht: 17:21:38' window title. The main area shows a table of market data with columns for 'Symbol', 'Bid', 'Ask', and 'Tägliche...'. The table lists various currency pairs and their current prices and daily percentage changes. To the right of the table, a vertical panel displays account information: 'ACCOU', 'CLIENT: M', 'BROKER:', 'LOGIN NU', 'BALANCE', 'PROFIT:', and 'CURRENC'. At the bottom, the 'Navigator' window is open, showing a tree view of 'Examples', 'Free Indicators', 'Autochartist_Risk_Calculator', 'Vortex Ultimate', 'Experten', and 'Advisors'. A small candlestick chart is visible in the bottom right corner.

Symbol	Bid	Ask	Tägliche...
#DE40	23029.60	23034.90	-1.21%
• #DE4011-25tick			
• #DE4015-25tick			
#NAS100	19736.02	19738.22	-0.31%
#US30	42084.50	42090.50	0.12%
#US500	5679.32	5680.42	-0.18%
AUDCAD	0.90203	0.90231	-0.90%
AUDCHF	0.55516	0.55537	-0.38%
AUDJPY	93.689	93.712	-0.82%
AUDNZD	1.09544	1.09579	0.24%
AUDUSD	0.62953	0.62969	-0.97%
CADCHF	0.61536	0.61558	0.54%
CADJPY	103.851	103.872	0.09%
CHFJPY	168.733	168.771	-0.45%

Backtesting

The DAX Breakout System operates on server time. There will be no issues with backtesting normal data. However if you want to do backtests on tick data, ensure that your data corresponds with the server time.

General Information

The volume calculation works with the distance to the Stop Loss. Depending on how much risk you want to take, the volume increases or decreases, but the distance to the Stop Loss remains unchanged. This could lead to problems with lower-funded accounts. When the Lot-step your broker provides is 1, I recommend using a higher funded account. 100'000.- would be optimal, so the calculations don't affect the performance.

As an example, you have 10'000.- loaded into your account and the distance to the Stop Loss is 200 points. That would be a loss of 2% with a Lot size of 1. The EA then can't trade a lower Lot than 1, so it takes 1 for the trade. This could have effect on the performance of the EA in either way.

If the Symbols lot-step is 0.1 I recommend an account with a balance of 10'000, if it's 0.01 1'000.-

Backtesting was done with an account size of 100'000.-

The Setfiles provided are based on past performances and do not guarantee future results. I will not take responsibility for any losses.
