**User Guide + Strategy Ebook**

Utazima Bitcoin Killer EA (v3.80 - Titanium Edition)

© 2026 Utazima MentorCreate | Updated: 24 Jan 2026

# Quick Start (60 Seconds)

Recommended timeframe: H1 (optimized). Attach the EA to any chart - it will auto-detect the correct broker symbols.

## 1) Install

- Download the EA from the MQL5 Market.
- MetaTrader 5 → File → Open Data Folder → MQL5 → Experts
- Paste the .ex5 file (if required) and restart MT5.

## 2) Launch

- Open a chart (BTCUSD recommended). Set timeframe to H1.
- Drag the EA onto the chart.
- Common tab: enable Allow Algo Trading and Allow DLL (if your build requires it).
- Confirm the dashboard shows SYSTEM: ONLINE.

## 3) First Safety Settings

- Start on Demo for 24-48 hours before live.
- Use 0.5% risk per trade for Prop Firms; 1.0% for personal accounts.
- Keep Max Spread conservative (tight markets only).

Tip: If you see No Trades, check spread/session/news filters - this EA is designed to protect capital.

# How the Engine Works

Utazima Bitcoin Killer EA (Titanium Edition) is built as a Dual-Core Multi-Vision machine. Each symbol can be traded using an independent logic core.

## Major v3.80 Highlights

- Dual-Core Engine: trades BTCUSD and USDJPY simultaneously (Crypto Volatility + Forex Trend logic).
- Auto-Symbol Detection: scans Market Watch to match broker symbols (USDJPY, USDJPY.pro, USDJPY+, etc.).
- "Sniper" Multi-TP System: one signal can split into five tactical take-profits (TP1 → TP5).
- Smart Vision Dashboard: live telemetry: trend regime (Trend vs Range), ATR, spread, and status.
- Optimization: logic recalibrated for H1 to maximize reliability.

## The 5-Target Philosophy (TP1 → TP5)

TP1	Secure fast profit (bank cash).
TP2	Lock profit and reduce risk.
TP3	Standard trend target.
TP4	Extended target for strong moves.
TP5	"Moonshot" runner for massive trend extensions.

Rule: TP1 & TP2 are designed to pay you quickly. TP5 is the long runner that creates the big equity spikes.

# Risk Management (Read This)

This EA is an automation engine, not a money printer. Professional results come from discipline, safe risk, and correct settings.

Always: demo test, verify lot sizing, and confirm symbol specifications (contract size/tick value) on your broker.

## Prop Firm Defender (Recommended)

- Risk per trade: 0.25% - 0.50%
- Max daily risk: 3% - 4% (stop trading when reached)
- Max concurrent positions: low (1-2 per symbol)
- News filter: ON (avoid high-impact spikes)
- Trading hours: stick to liquid sessions (London/NY).

## Personal Account Growth (Balanced)

- Risk per trade: 0.75% - 1.25%
- Spread limit: moderate (avoid wide spread periods)
- Multi-TP: ON (locks profit automatically)
- Use VPS: recommended for 24/5 stability.

Warning: High-risk settings (grid/martingale) can blow accounts. Use only with experience and strict drawdown control.

# Strategy 1: Prop Firm Defender (UNLOCKED)

Goal: pass funded challenges with controlled drawdown and steady wins.

## Best Setup

- Symbol: BTCUSD (H1)
- Risk: 0.5% (or lower)
- Multi-TP: Enabled (secure TP1/TP2 fast)
- Regime Detection: Hybrid (Trend + Scalp conservative)
- Max Daily Risk: 4.0% hard cap

## How It Trades

- Prefers clean confirmations and avoids overtrading.
- Attempts to trade when the market has enough structure and acceptable spread.
- Stops trading when daily risk limits are hit.

If you are new: run this set for 1-2 weeks and collect stats before changing anything.

## Strategy 2: Gold Rush (UNLOCKED)

Goal: capitalize on XAUUSD volatility while still using controlled risk.

### Best Setup

- Symbol: XAUUSD / GOLD (H1)
- Risk: 1.0% (personal accounts) | 0.5% (prop)
- Max Spread: adjusted for gold (wider than majors)
- Fast EMA: 8 (faster reaction)
- TP5: 10x ATR runner for moonshot moves

### Notes

- Gold can spike fast - spreads widen around news and rollover.
- Use the news filter and avoid low-liquidity hours.
- For prop firms: reduce risk and tighten exposure limits.

You can trade without special setfiles, but using a tuned setfile improves consistency and reduces drawdown.

## Strategy 3: Smart Grid Master (VIP - LOCKED)

Risk level: HIGH (calculated). This is a premium recovery profile reserved for experienced users.

This strategy uses controlled layering only at specific reversal zones with confirmation filters. It is designed to reduce the chance of closing a trade at a loss - but it can increase drawdown if misused.

### What You Get (When Unlocked)

- Smart layering rules (not blind averaging)
- Recovery factor and spacing tuned per symbol
- Safe exit logic to reduce exposure when volatility spikes

### Access

To unlock the VIP Set File, DM the admin on MQL5 with this code:

**GRID MASTER**

Important: never run grid/martingale on Prop Firm challenges unless you fully understand the risk.

## Strategy 4: Titanium Scalper (VIP - BEAST MODE)

Risk level: EXTREME. High-frequency aggressive profile for small-account flips. Not recommended for beginners.

This mode increases trade frequency and reacts faster. It can generate fast growth in the right conditions, but it can also create rapid drawdown.

### Profile

- Timeframe: M15 (special configuration)
- Risk: up to 3.0% (high risk)
- Frequency: can reach 10-20 trades/day depending on volatility
- Requires tight spreads and stable execution (VPS recommended)

### Access

To unlock the VIP Set File, DM the admin on MQL5 with this code:

**BEAST MODE**

# Troubleshooting & Best Practices

## EA Shows 'No Trades'

- Check spread - if spread is above the Max Spread filter, entries are blocked.
- Check session - the EA may trade only in selected hours.
- Check news filter - high-impact news blocks trading.
- Verify Auto Symbol Detection found the correct symbols in Market Watch.

## Backtesting Tips

- Use Every Tick / Real Ticks when possible for crypto and gold.
- Disable unrealistic tester options that distort tick value or profit calculations.
- Start with the default H1 profile before optimizing.

## Execution Tips

- Use a VPS for stable 24/5 operation.
- Avoid running heavy indicators on the same chart as the EA.
- Keep leverage and margin healthy - do not overload the account.

# Support, Updates, and VIP Unlocks

You are welcome to request help, VIP setfiles, or developer mentorship. Keep your message short and include your broker + symbol names.

## What to Send When You DM

- Your broker name (e.g., Exness, IC Markets, etc.)
- Symbols you trade (BTCUSD, USDJPY, XAUUSD) and any suffix (e.g., BTCUSDm)
- Account type (Demo / Live / Prop) + leverage
- A screenshot of the EA dashboard
