

TakePropips TradePad Pro

Installation Guide

<https://www.takepropips.com/mql5>

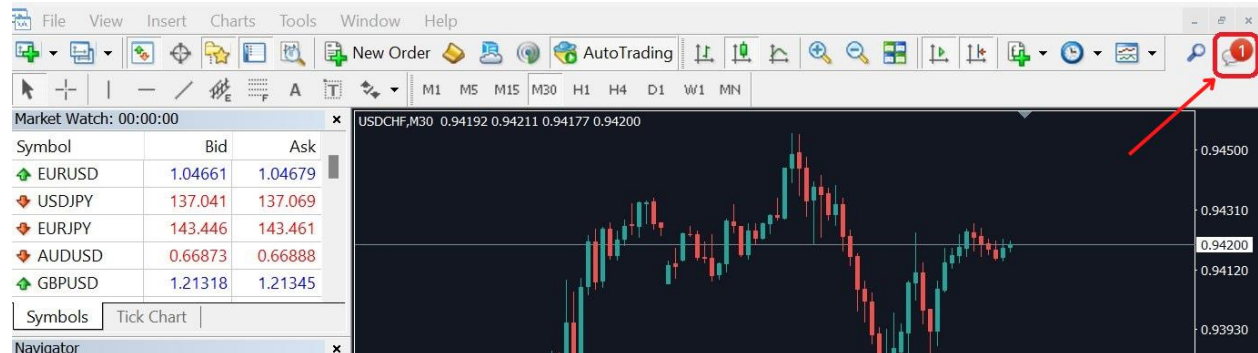

How to install TakePropips TradePad Pro on MetaTrader 4?

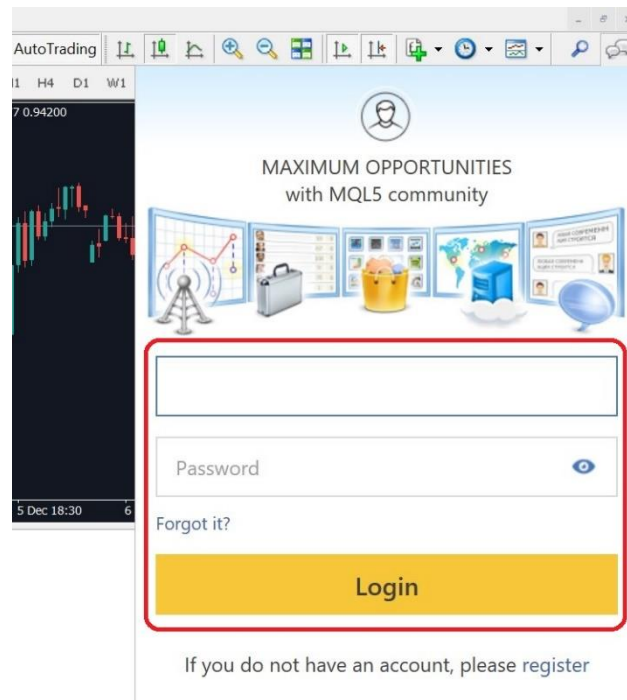

Step 1. Make sure to log in using your MQL5 account on MT4

To check if you are logged in, click the highlighted icon on the right upper corner of your MT4 terminal.

Make sure that the MQL5 account that you are logging in is the same account you used to purchased the TakePropips TradePad Pro.

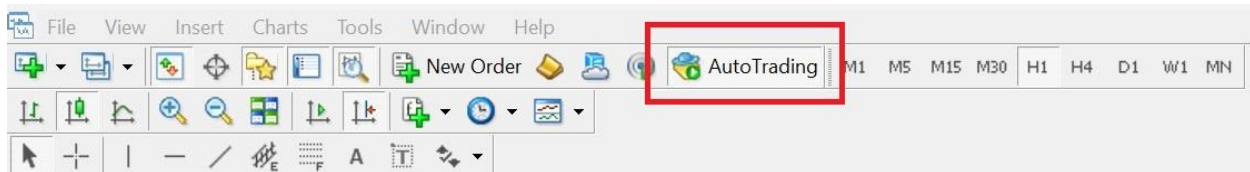

If you are not logged in, you will see this pop-up. You need to enter your MQL5 credential to continue with the installation.

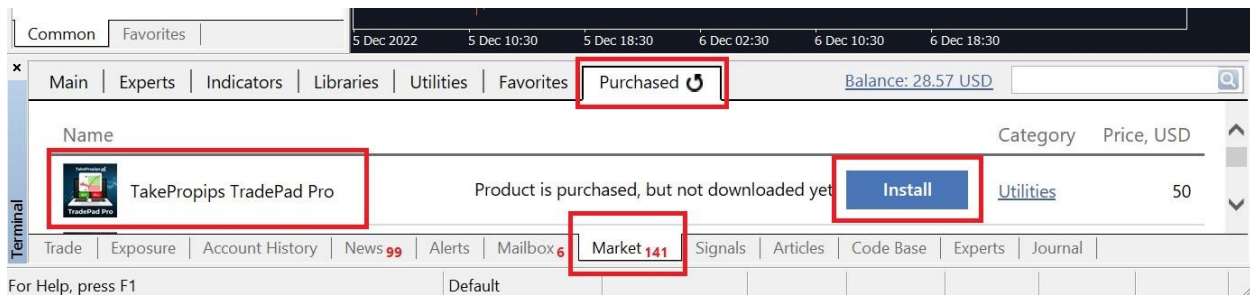

Step 2. Enable Auto-Trading

Make sure to enable Auto-Trading. It should show the green play icon once its enabled.

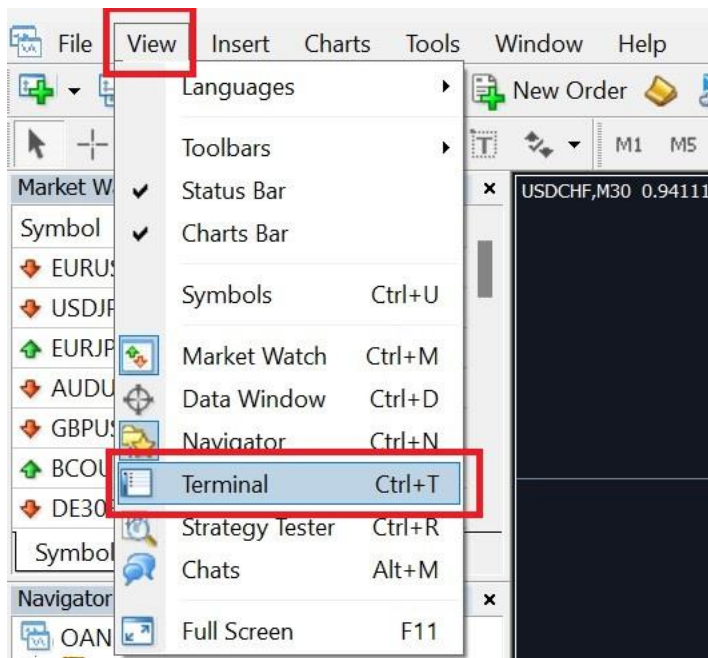

Step 3. Install the TakePropips TradePad Pro

Go to your Terminal panel and then click “Market” tab. After that, click the “Purchased” tab. Then find the TakePropips TradePad Pro and then click “Install”. After you click “Install”, the button should change to the word “Open”. You can click Open which will highlight the program on your Navigator panel.

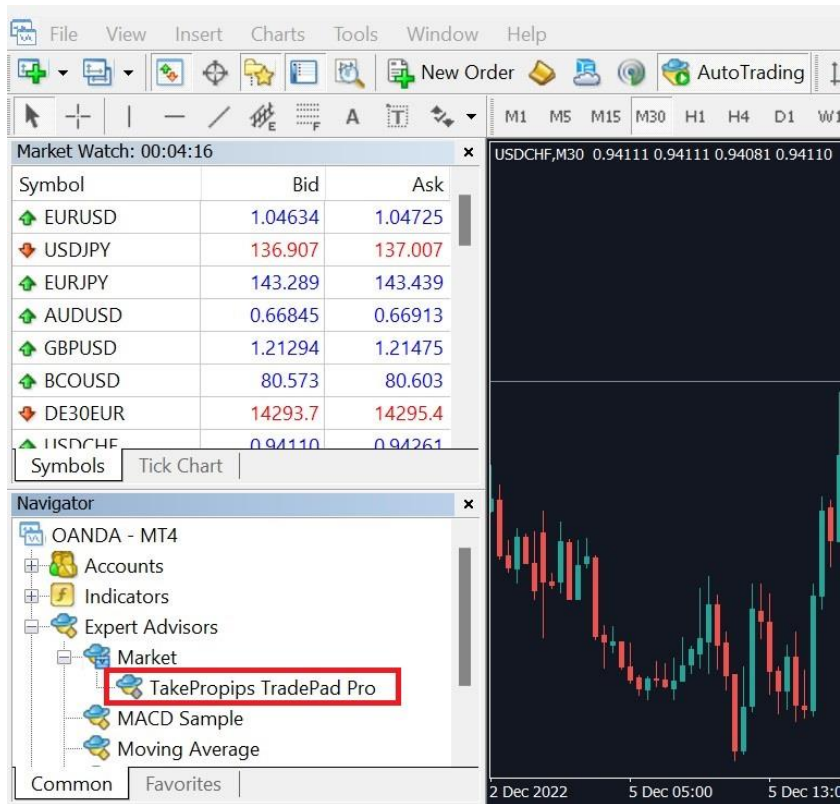

If you do not see the Terminal panel on your MT4, then you can press Ctrl + T or go to “View” and click “Terminal” to see the Terminal panel.

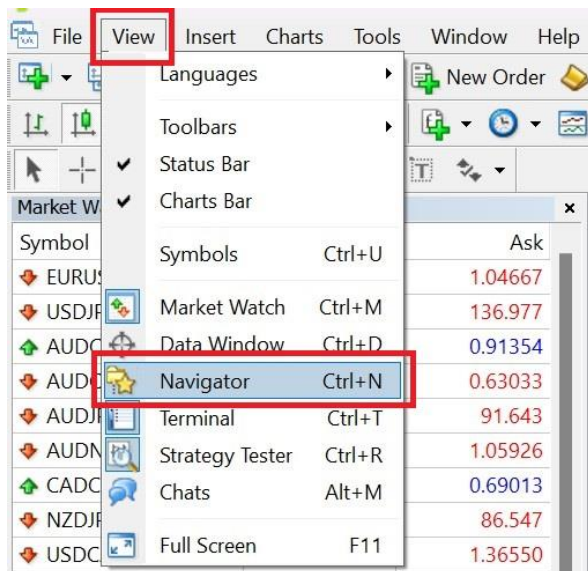

Step 4. Apply the TakePropips TradePad Pro to the chart

Go to your Navigator panel and navigate through “Expert Advisors” -> “Market” -> “TakePropips TradePad Pro”.

Double click or drag the TakePropips TradePad Pro to the chart. You should then see a dialog panel appear after doing this.

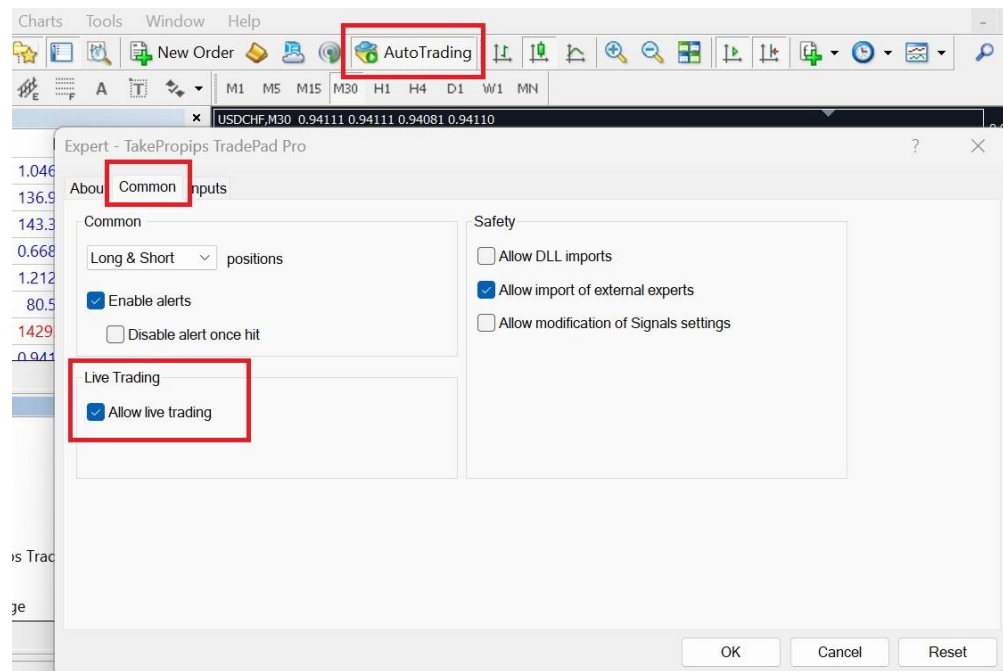

If you do not see the Navigator panel, then press Ctrl + N or go to “View” and click “Navigator”.

Step 5. Make sure “Allow live trading” is checked

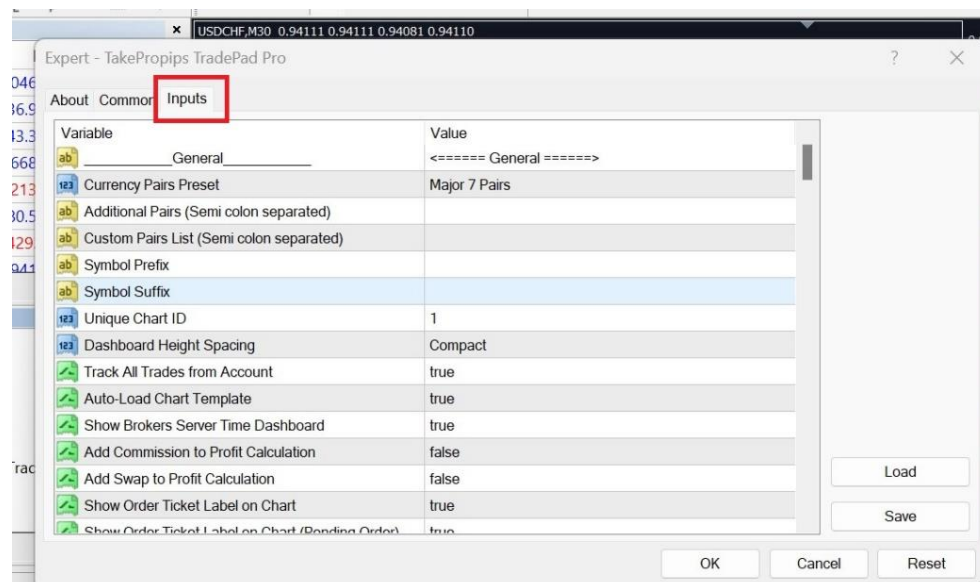

Go to “Common” tab and make sure “Allow live trading” is checked.

Step 6. Check and customize input settings

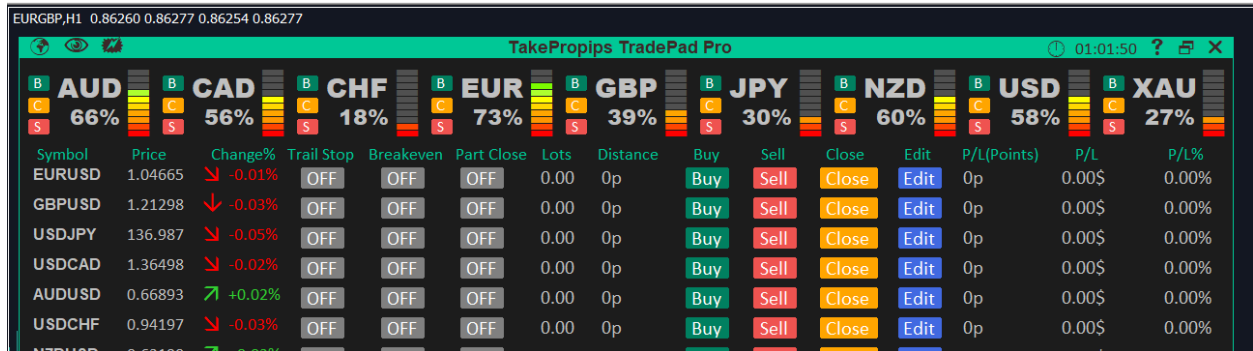

Go to “Inputs” tab to see all the available input settings that you can modify for the TakePropips TradePad Pro. You can refer to the user manual to see the explanation of each input setting.

NOTE: If the pair name on your broker has a suffix (example: “EURUSD.m” instead of just “EURUSD”), then you will need to add the suffix .m to the Symbol Suffix input setting.

Step 7. Congrats! The installation is successful!

You should now see the trading dashboard on the chart along with the pairs you specified on the input setting.

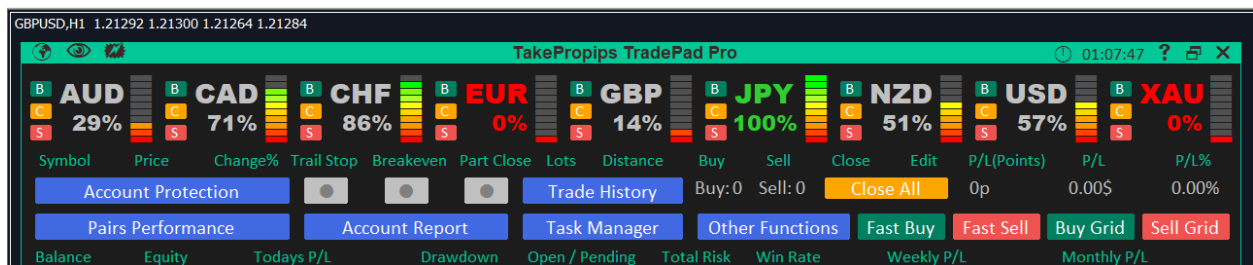

Troubleshooting

I do not see the pairs on the dashboard. What can I do to fix this?

The reason why the pairs are not showing is because the pairs name on your Market Watch window does not match with the pairs name you set on the input settings of the TradePad Pro.

Example: If the pair name on your broker has a suffix (example: "EURUSD.m" instead of just "EURUSD"), then you will need to add the suffix .m to the Symbol Suffix input setting.

To go to the input setting after you have applied the TakePropips TradePad Pro to the chart, press F7 or right click anywhere on the chart and hover over the "Expert Advisors" and click "Properties".
