

ATOMIC ANALYST

AI MARKET VERDICT ENGINE

VISUAL USER MANUAL

A tactical guide to reading the verdict, evidence, confirmation, and active trade levels inside Atomic Analyst.

VERDICT

Read **BUY ONLY**,
SELL ONLY, or **WAIT**.

EVIDENCE

Confirm market pressure
and consensus.

TRADE LEVELS

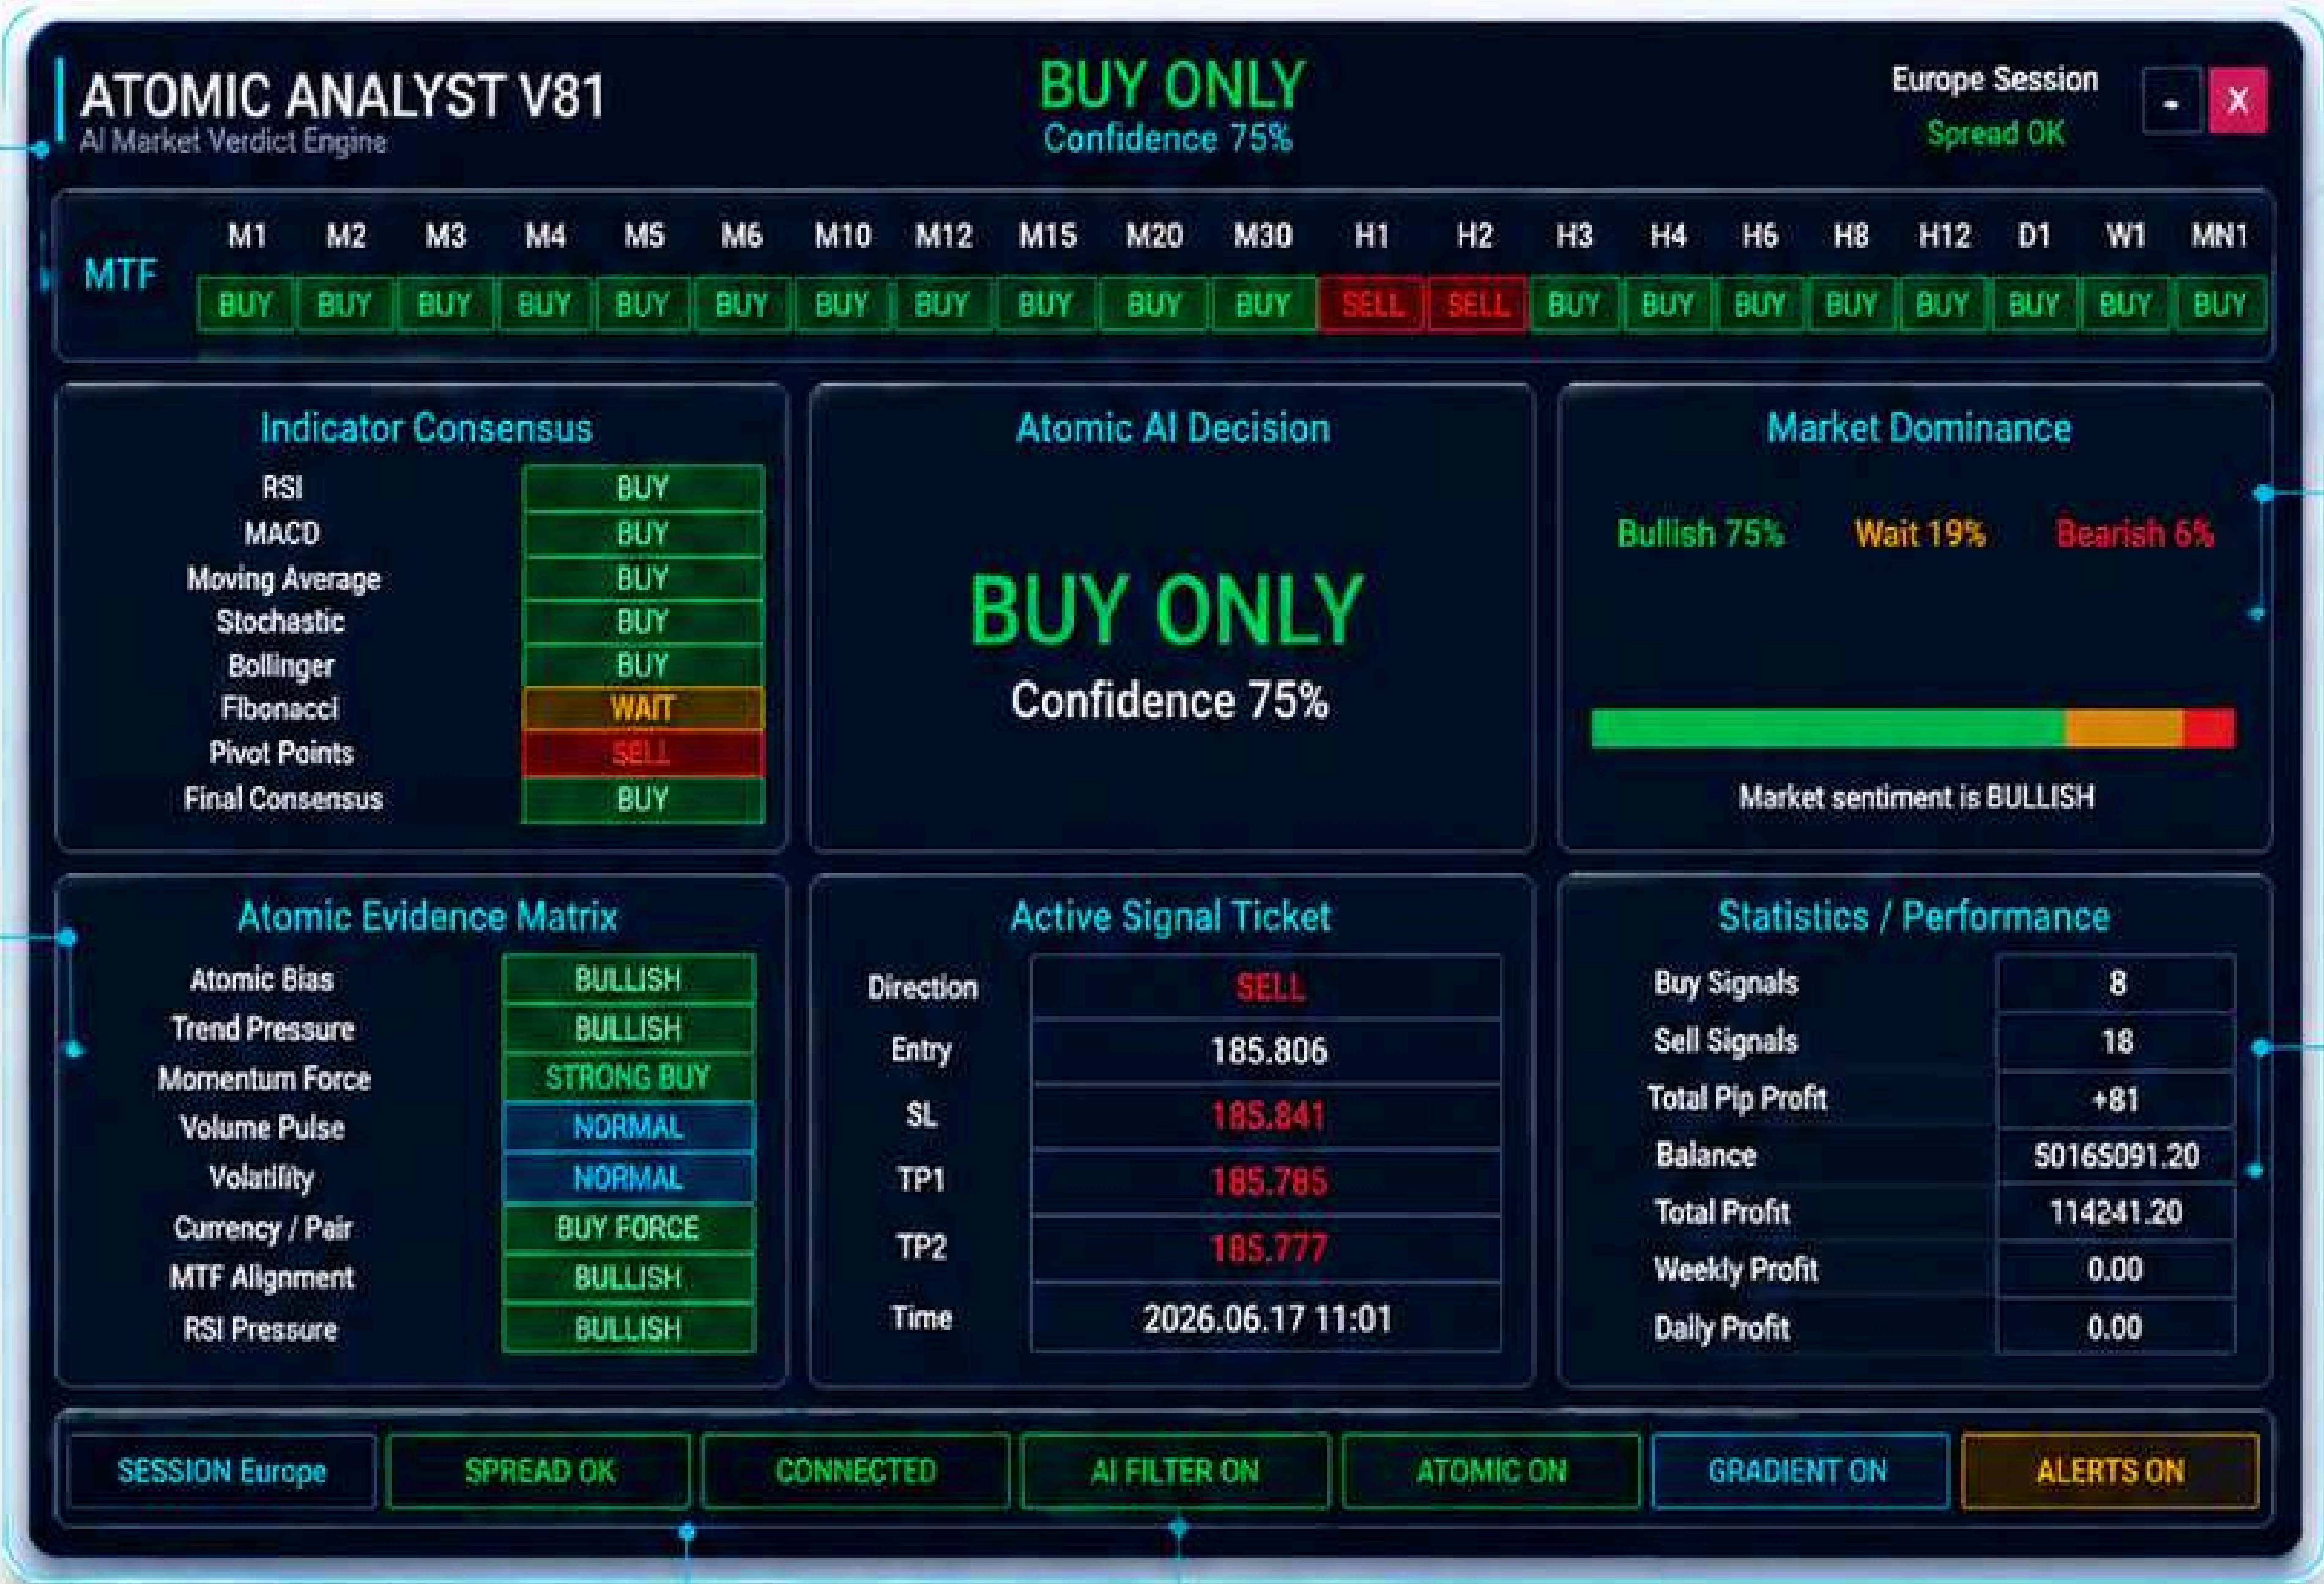

Review Entry, **SL**,
and **TP** structure.

DECISION → EVIDENCE → CONFIRMATION → TRADE PLAN

START HERE

How Atomic Analyst Works

Atomic Analyst organizes market information into a simple reading sequence: verdict, evidence, confirmation, and active trade levels.

- 1 Verdict**
The main AI verdict shows the market direction.
- 3 Evidence & Consensus**
Confirm the direction with indicators and evidence layers.

- 2 Confidence & Dominance**
See strength of the verdict and market pressure.
- 4 Active Setup**
Check direction, entry, SL, and TP levels in the active signal ticket.

- 5 Controls & Status**
Monitor session, spread, connection, filters, and alerts.

Atomic Analyst is a **decision-support** tool. It organizes market evidence, but the trader remains **responsible** for execution and risk management.

PANEL ANATOMY

Know Where Everything Is

Atomic Analyst is organized into clear zones:
verdict, confirmation, evidence, trade levels, statistics, and controls.

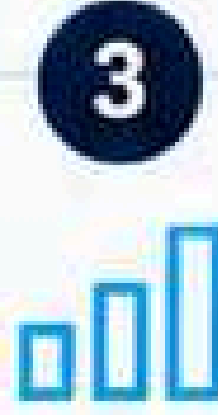

Main Verdict Bar

Shows the current Atomic AI verdict and confidence level. This is the first area to read.

MTF Rail

Displays the current BUY, SELL, or WAIT state across multiple timeframes.

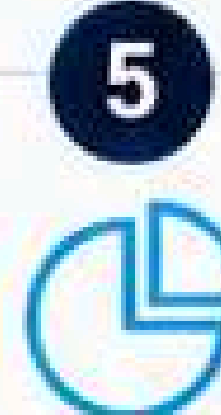

Indicator Consensus

Summarizes how familiar technical indicators currently read the market.

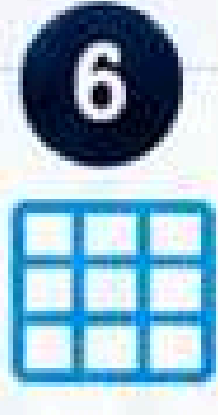

Atomic AI Decision

Presents the main directional decision in a large, easy-to-read format.

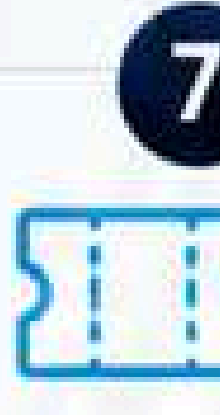

Market Dominance

Shows bullish, bearish, and waiting pressure as a market-balance view.

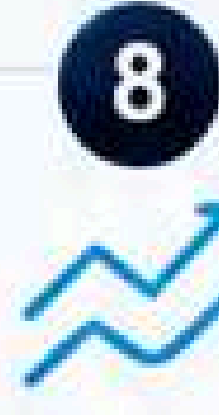

Atomic Evidence Matrix

Organizes deeper market evidence such as trend pressure, momentum, volatility, and alignment.

Active Signal Ticket

Displays the active setup information such as Direction, Entry, SL, TP levels, and signal time.

Statistics / Performance

Shows tracked signal and performance information for context.

Status & Control Strip

Shows session, spread, connection, filters, gradient, and alert states.

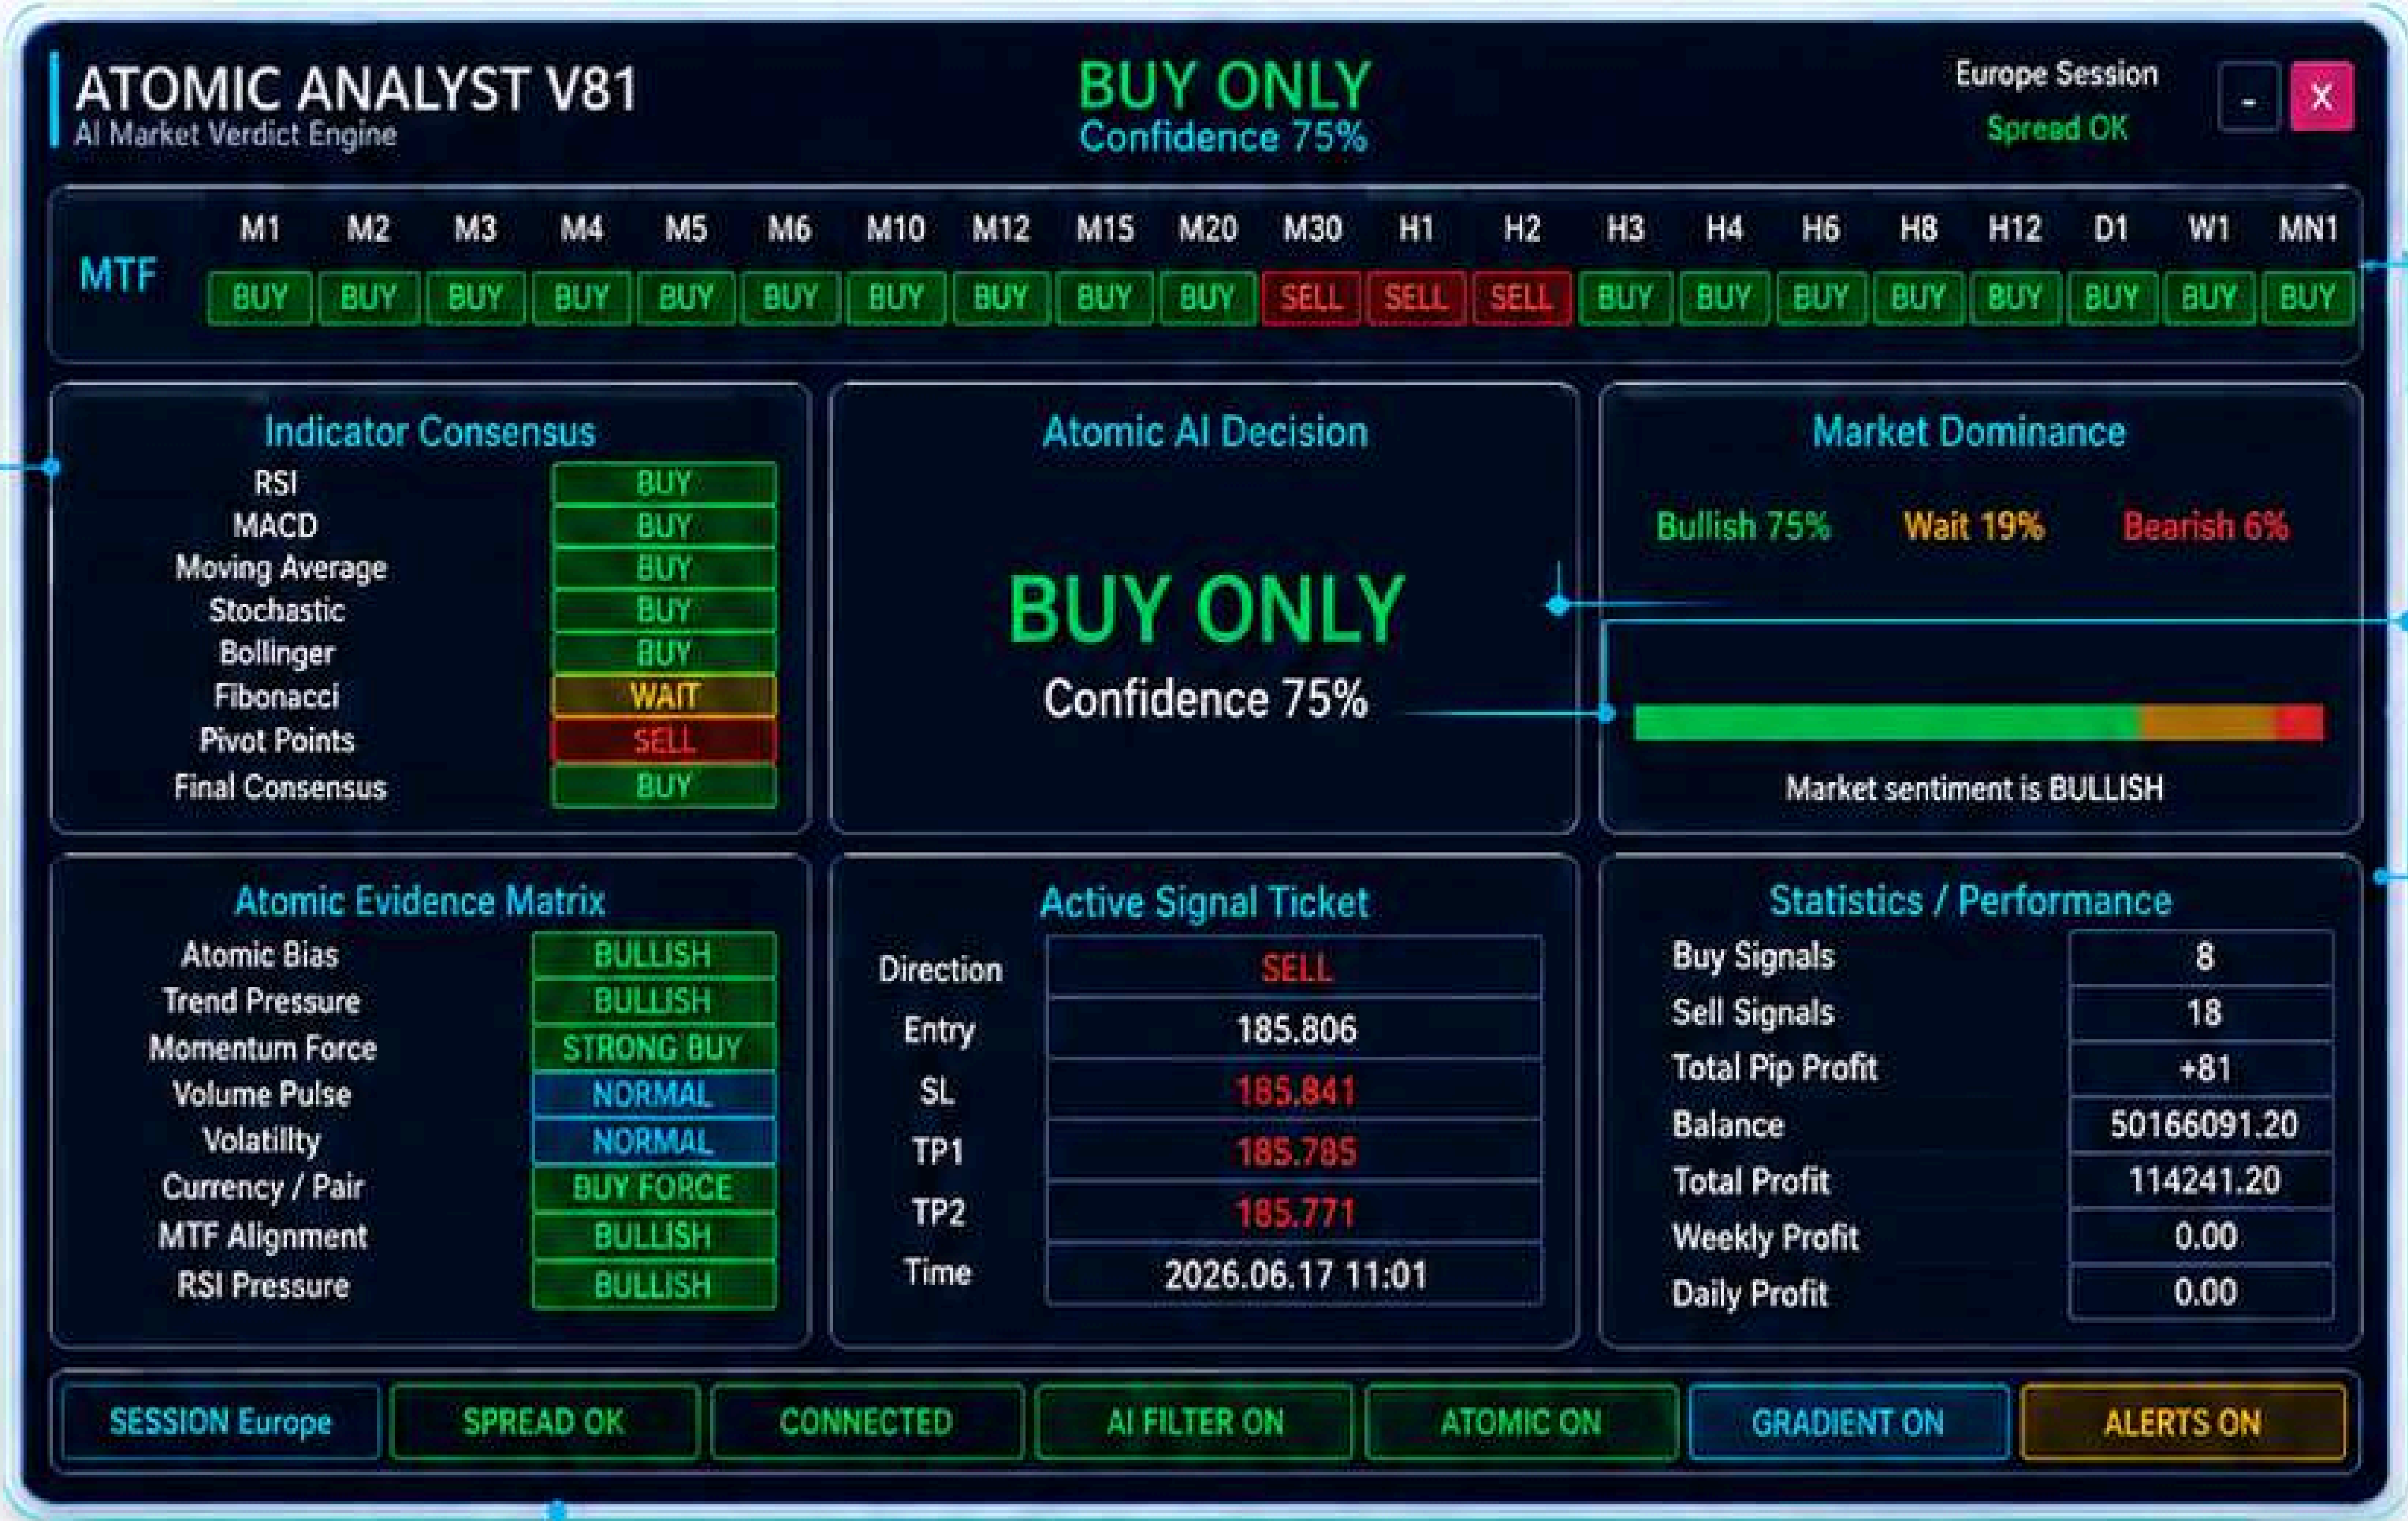

Tip: Start with the verdict, then use the surrounding sections to confirm whether the market context supports it.

ATOMIC AI VERDICT

BUY ONLY, SELL ONLY, WAIT & Confidence

The verdict summarizes the current market direction detected by Atomic Analyst, while Confidence shows how strongly the evidence supports that verdict.

03 Evidence Confirmation
Use the evidence matrix, indicator consensus, dominance, and MTF rail to confirm the verdict.

01 Verdict State
The main market verdict tells you whether Atomic Analyst currently favors **BUY ONLY**, **SELL ONLY**, or **WAIT**.

02 Confidence Level
Confidence shows the strength of agreement behind the active verdict.

04 Trader Decision
Atomic Analyst supports decision-making. The trader remains responsible for execution and risk.

BUY ONLY

Atomic AI Decision

BUY ONLY

Confidence 75%

Meaning:
Atomic Analyst currently favors bullish market conditions.

Use:
Look for confirmation from evidence, consensus, dominance, and trade levels before deciding.

SELL ONLY

Atomic AI Decision

SELL ONLY

Confidence 88%

Meaning:
Atomic Analyst currently favors bearish market conditions.

Use:
Confirm that pressure, consensus, and active setup information support the bearish case.

WAIT

Atomic AI Decision

WAIT

Confidence 56%

Meaning:
The market evidence is mixed, weak, or not clear enough for directional permission.

Use:
Avoid forcing a trade and wait for stronger alignment.

How to Read Confidence

Confidence summarizes how strongly the current evidence supports the active Atomic verdict. It should be read as **evidence agreement**, not as a guaranteed probability of winning.

Confidence ≠ Guaranteed Win Rate

It reflects the strength of current evidence agreement, not certainty about the next market move.

ATOMIC EVIDENCE MATRIX

The Evidence Behind the Verdict

The Evidence Matrix organizes multiple market conditions so the trader can see what supports, weakens, or confirms the active Atomic verdict.

- 1 Atomic Bias
Summarizes the current directional bias detected by Atomic Analyst.
- 2 Trend Pressure
Shows whether directional trend pressure is currently supporting the market move.
- 3 Momentum Force
Highlights whether momentum is strengthening, weakening, or supporting a directional push.
- 4 Volume Pulse
Shows whether volume behavior is adding support or remaining neutral.

BULLISH

- 5 Volatility
Helps describe the current activity state of the market.
- 6 Currency / Pair
Shows whether the pair or currency strength content supports the current direction.
- 7 MTF Alignment
Shows whether multiple timeframes are aligned with the active market direction.
- 8 RSI Pressure
Adds RSI-based pressure context to the overall evidence picture.

ALERTS ON

- 1 Atomic Bias
The broad directional reading currently detected by Atomic Analyst.
- 2 Trend Pressure
Shows whether the current trend pressure is supporting the active direction.
- 3 Momentum Force
Helps identify whether momentum is strong, weak, or neutral.
- 4 Volume Pulse
Shows whether volume behavior adds support to the current market condition.
- 5 Volatility
Describes the current activity state of the market.
- 6 Currency / Pair
Adds pair-strength or currency-strength context to the evidence picture.
- 7 MTF Alignment
Shows whether different timeframes are supporting the same directional idea.
- 8 RSI Pressure
Adds RSI pressure context as part of the broader market assessment.

How to Use the Matrix

Read the Evidence Matrix as a group of supporting layers. A stronger setup usually has several rows pointing in the same direction, while mixed rows suggest caution or waiting.

Evidence Alignment ≠ Guaranteed Result

The Matrix helps organize market evidence. It does not guarantee what price will do next.

Do not judge the verdict from one row alone. Stronger context appears when several evidence layers align in the same direction.

INDICATOR CONSENSUS

Confirm the Market Pressure

Indicator Consensus shows how familiar technical tools read the market, while Market Dominance summarizes bullish, bearish, and waiting pressure.

01
Indicator Rows
Each row shows how a familiar technical indicator currently reads the market.

02
BUY / SELL / WAIT States
The state tells you whether that indicator supports buying, selling, or waiting.

03
Final Consensus
Summarizes the overall indicator agreement into one quick reading.

AI FILTER ON

ATOMIC ON

GRADIENT ON

ALERTS ON

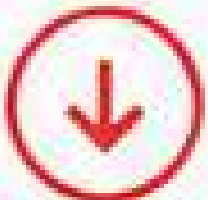

Indicator Consensus

A quick overview of how familiar technical indicators currently interpret the same market.

BUY

The selected indicator currently supports bullish market conditions.

SELL

The selected indicator currently supports bearish market conditions.

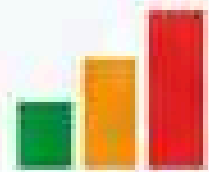

WAIT

The selected indicator is mixed, neutral, or not strong enough for clear directional support.

Final Consensus

The combined reading of the listed indicator rows.

Market Dominance

Shows the balance between bullish, bearish, and waiting pressure.

Dominance Bar

A visual pressure meter that helps the trader see which side currently has stronger control.

How to Use This Page

Use Indicator Consensus and Market Dominance as confirmation layers. A stronger trading context appears when the verdict, consensus, dominance, and evidence matrix all support the same direction.

Consensus ≠ Guaranteed Outcome

Indicator agreement and dominance pressure help organize market context. They do not guarantee that price will continue in that direction.

MULTI-TIMEFRAME ALIGNMENT

Read the Market Across Timeframes

The MTF rail shows how Atomic Analyst reads multiple timeframes, helping the trader see whether the market context is aligned or mixed.

MTF

1

Timeframe Labels

Each label represents a timeframe being monitored by Atomic Analyst.

2

BUY State

A BUY state means that timeframe currently supports bullish market conditions.

3

SELL State

A SELL state means that timeframe currently supports bearish market conditions.

4

WAIT State

A WAIT state means that timeframe is mixed, neutral, or not clear enough for directional support.

5

Alignment

When several timeframes agree, the market context is more aligned.

6

Mixed Readings

Mixed readings show that different timeframes are not fully supporting the same direction.

ALERTS ON

Where the MTF Rail Sits in the Panel

The MTF rail appears at the top of the panel. It gives a quick overview of how each timeframe is currently reading the market.

Timeframe Labels

Each label shows a chart timeframe being monitored by Atomic Analyst.

BUY

That timeframe currently supports bullish market conditions.

SELL

That timeframe currently supports bearish market conditions.

WAIT

That timeframe is mixed, neutral, or not strong enough for clear directional support.

Aligned Market

Several timeframes point in the same direction, creating stronger confirmation.

Mixed Market

Some timeframes disagree, which means the trader should be more cautious.

MTF Confirmation

Use the rail to compare the main verdict with what other timeframes are showing.

How to Use MTF Alignment

Start with the Atomic AI Verdict, then check whether the MTF rail supports the same direction. A stronger context appears when the verdict, evidence matrix, consensus, dominance, and multiple timeframes align.

MTF Alignment ≠ Win Probability

Multi-timeframe agreement helps confirm market context. It does not guarantee that the next trade will win or that price will continue in the same direction.

ACTIVE SIGNAL TICKET

Entry, SL, TP & Signal Time

The Active Signal Ticket organizes the current setup information so the trader can quickly review direction, entry, protective level, targets, and timing.

- 01

Direction

Shows whether the active setup is currently structured as BUY or SELL.
- 02

Entry

Shows the price level associated with the active Atomic setup.
- 03

Stop Loss

Shows the protective reference level associated with the setup.
- 04

Take Profit Levels

Shows the target levels calculated for the active setup.
- 05

Signal Time

Shows when the active Atomic setup was generated.

How to Use the Ticket

Read the ticket after checking the verdict, evidence, consensus, dominance, and MTF rail.

The ticket gives the structured setup information, but the trader still decides whether the trade is acceptable.

Direction

The active setup direction currently shown by Atomic Analyst.

Entry

The price level associated with the active setup.

Stop Loss

The protective reference level linked to the setup.

Take Profit

The target levels displayed for the active setup.

Signal Time

The time when the current setup was generated.

Chart Levels

The visual SL and TP structure displayed directly on the chart.

TP Levels ≠ Guaranteed Targets

TP and SL levels are trade-planning references. They do not guarantee that price will reach the target or avoid the stop.

CONTROLS, FILTERS & ALERTS

ALERTS ON

How to Use Statistics

Use statistics as context after reviewing the current market setup. The current verdict, evidence, consensus, MTF alignment, and signal ticket should remain the main reading sequence.

C RECOMMENDED READING WORKFLOW

Statistics are Context

Use the statistics to understand tracked performance information. They support review, not prediction.

Historical Statistics ≠ Future Guarantee

Statistics describe tracked or displayed performance context. They do not guarantee future results, future profit, or the outcome of the next setup.

Alerts ≠ Automatic Trading

Alerts are notifications. The trader remains responsible for reviewing the setup and deciding whether to act.

FINAL RESPONSIBILITY STATEMENT

Atomic Analyst organizes market evidence and trade-planning information. The trader remains responsible for execution, position sizing, and risk management.

Discover Axiom Matrix

Use Axiom Matrix with Atomic Analyst

Let Axiom Matrix find the opportunity, then use Atomic Analyst to confirm the setup and plan the trade.

Axiom Matrix scans the market for strong opportunities across many symbols and timeframes, while Atomic Analyst helps you review the selected chart, wait for the right condition, and identify stop loss and take profit levels.

01 · Axiom Matrix scans the market

Axiom Matrix acts as the radar scanner that finds the strongest opportunities from one chart.

02 · Atomic Analyst confirms and plans the trade

Atomic Analyst shows the selected chart with clear stop loss and multiple take profit levels for trade planning.

Why this combination matters

Without a scanner, reviewing many symbols across many timeframes manually is slow and exhausting. Axiom Matrix does the heavy work in the background from one chart and highlights the strongest opportunities. Once the opportunity is found, Atomic Analyst helps review the chart, wait for the right condition, and see practical stop loss and take profit levels.

20
symbols

21
timeframes

Hundreds
of chart checks
avoided

How to combine them

01 · Let Axiom Matrix scan

Use Axiom Matrix to scan the Market Watch automatically and look for the strongest available setup.

02 · Wait for a strong signal

Focus only when Axiom Matrix highlights a strong buy or strong sell and sends your attention to a specific symbol and timeframe.

03 · Open Atomic Analyst

Go to the same symbol and timeframe in Atomic Analyst after the Axiom Matrix opportunity is identified.

04 · Review the setup

Use Atomic Analyst to confirm the market condition and wait for the buy or sell setup if needed.

05 · Read stop loss and take profit

Use Atomic Analyst to identify the trade structure, including stop loss and take profit targets.

06 · Make the final decision

Confirm the chart context and manage risk before taking the trade.

What each tool does

Axiom Matrix

- scans many markets
- detects strong opportunities
- saves time
- sends focus to the best setup

Atomic Analyst

- helps inspect the selected chart
- helps confirm or wait for the setup
- shows stop loss
- shows take profit levels
- works after the opportunity is found

Extra confirmation from alerts

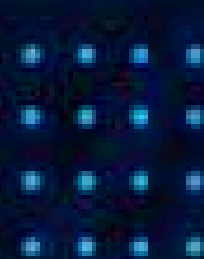

If alerts are enabled, you may sometimes receive both an Axiom Matrix alert and an Atomic Analyst alert for the same direction. When both tools align, this can add confidence to the setup review — but chart confirmation and risk management are still required.

Important — Axiom Matrix helps you find the opportunity. Atomic Analyst helps you review and plan the trade. Neither tool removes the need for chart confirmation, discipline, or risk management.

Use Axiom Matrix to scan the market efficiently, then use Atomic Analyst to confirm the setup and plan the trade with stop loss and take profit levels.

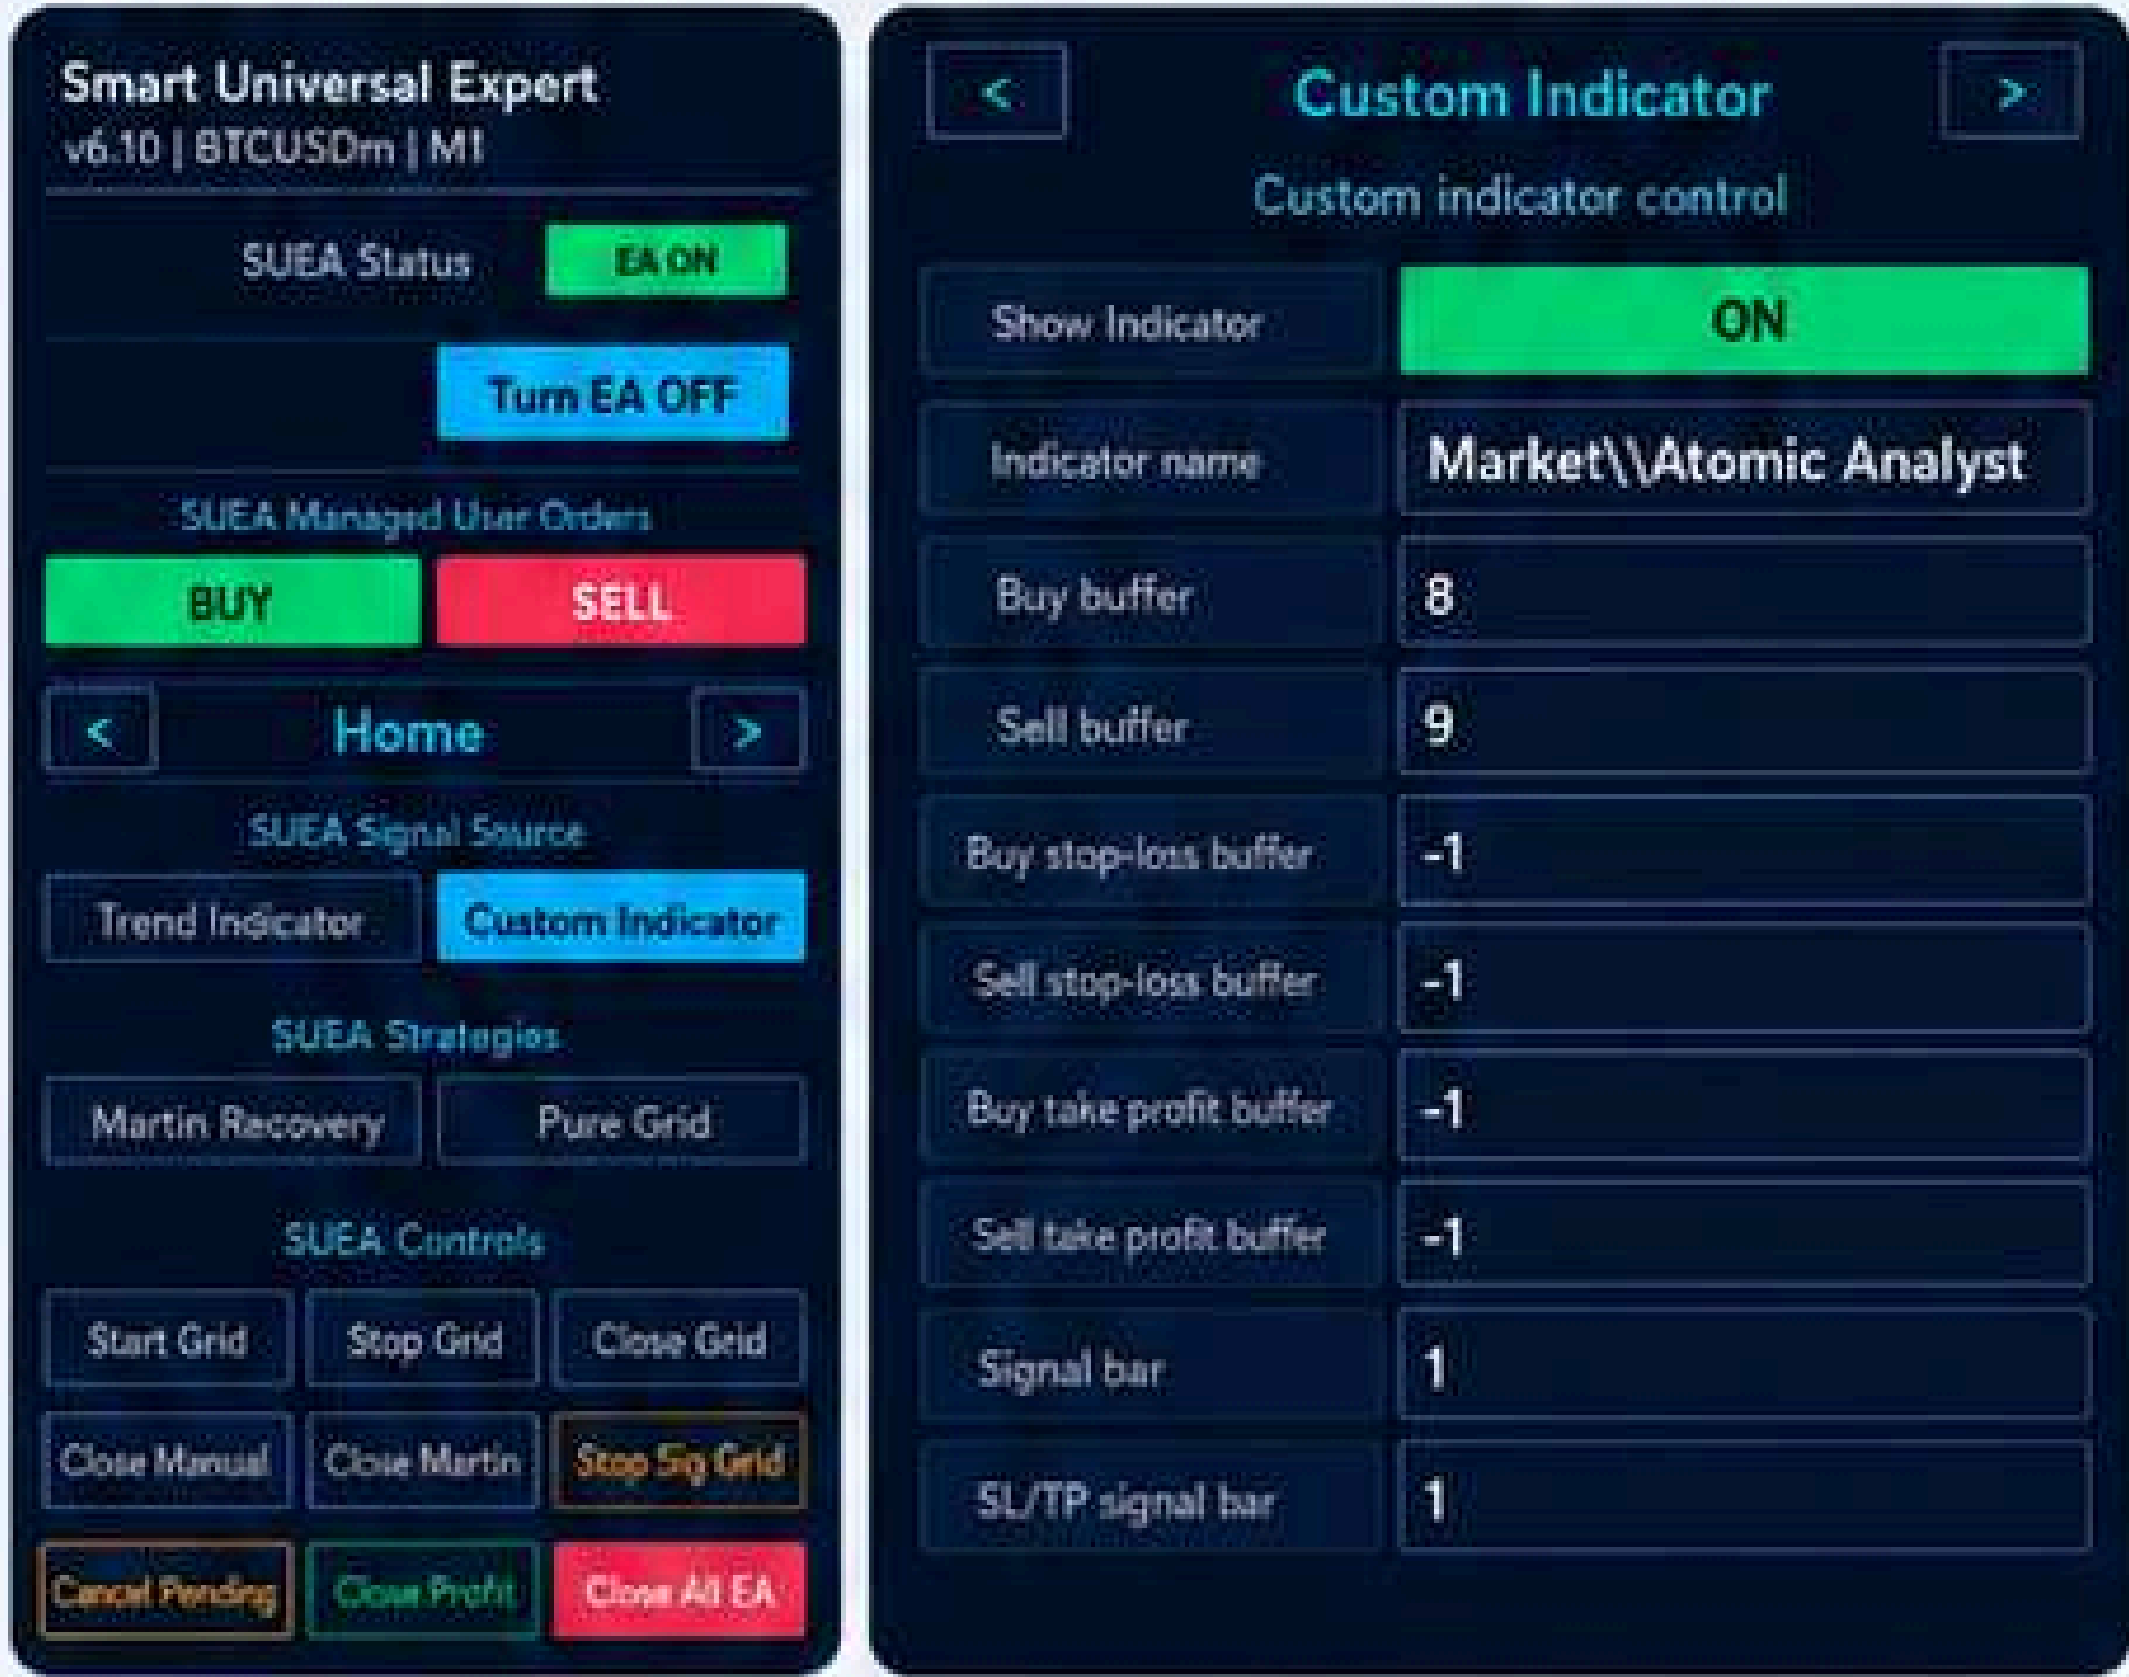

Discover Smart Universal Expert Advisor

Use Smart Universal Expert Advisor with Atomic Analyst

Use Smart Universal Expert Advisor to automate the workflow, while Atomic Analyst provides the custom-indicator signal, market context, and trade-planning structure.

Smart Universal Expert Advisor can work with external custom indicators through its Custom Indicator page. Atomic Analyst can be connected through iCustom buffers, allowing both products to work together in one structured workflow.

01 · Smart Universal Expert Advisor reads Atomic Analyst

SUEA can read Atomic Analyst through the Custom Indicator page and use the indicator data inside an automated workflow.

02 · Atomic Analyst provides the market context

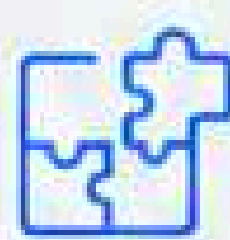

Atomic Analyst helps confirm the setup, review the chart, and identify stop loss and take profit levels.

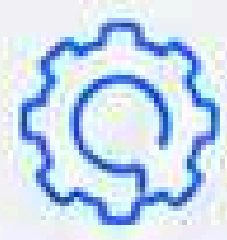

Why this combination matters

Smart Universal Expert Advisor gives you the automation engine, while Atomic Analyst supplies the custom-indicator signal and chart confirmation context. Together, they help connect automation with structured market analysis.

Custom indicator integration

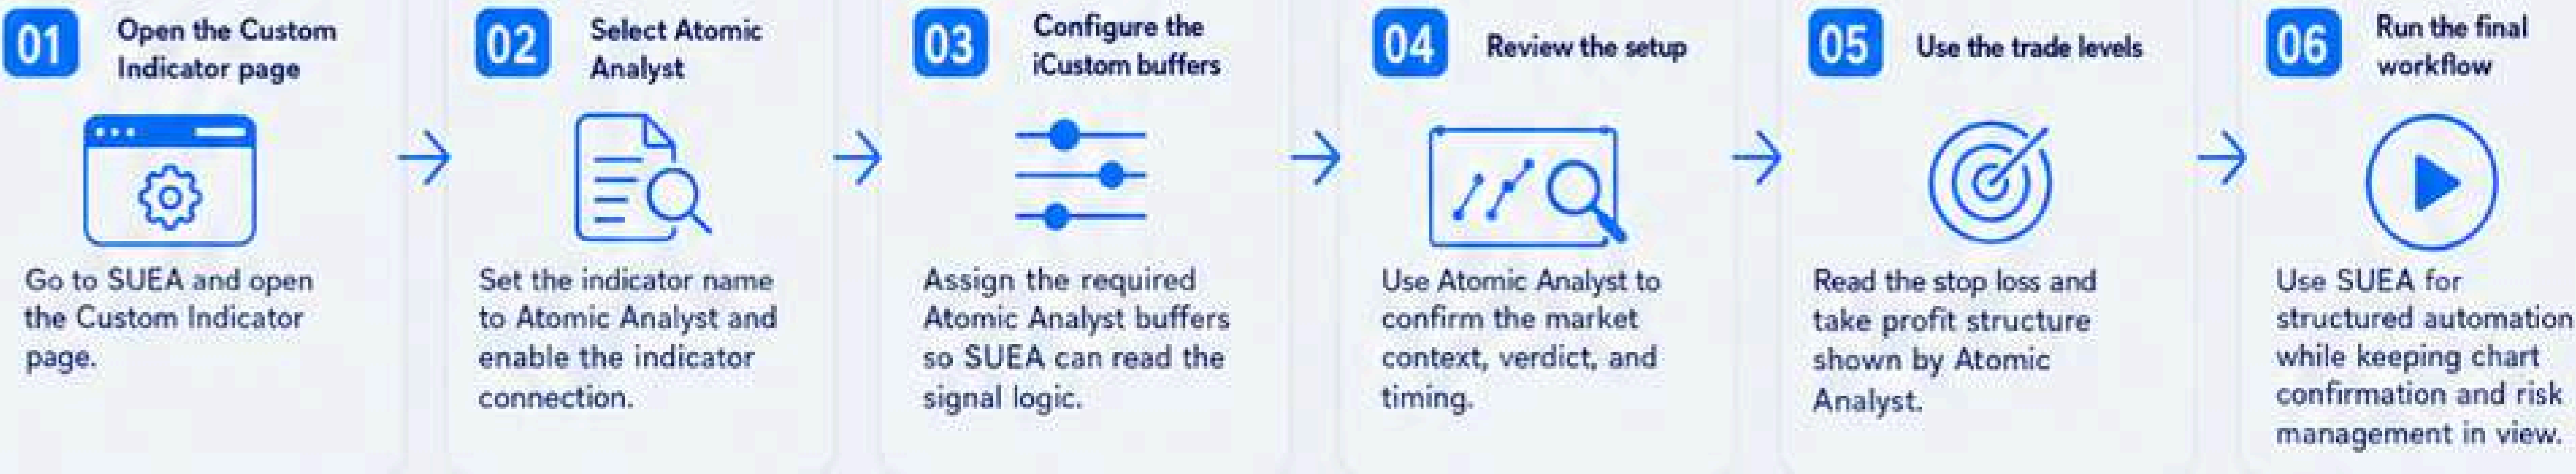

Automation-ready workflow

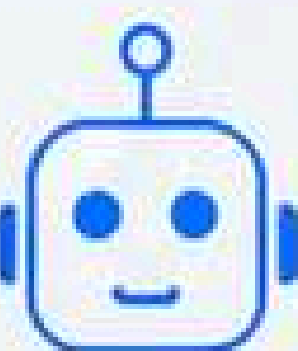

Chart confirmation support

How to combine them

What each tool does

Smart Universal Expert Advisor

- reads custom indicators
- supports automation workflows
- manages execution logic
- helps structure trade management

Atomic Analyst

- provides market verdict
- adds evidence and confirmation
- shows stop loss levels
- shows take profit levels
- supports trade planning

Why they work together

Atomic Analyst can serve as a custom-indicator source inside SUEA. This allows the trader to combine analytical confirmation with automation logic in one connected workflow.

Important — Smart Universal Expert Advisor can automate the workflow, while Atomic Analyst helps confirm and plan the setup. Neither tool removes the need for chart review, discipline, or risk management.

Use Smart Universal Expert Advisor to automate the workflow, then use Atomic Analyst to confirm the setup and plan the trade with stop loss and take profit levels.
