INSIDE THIS GUIDE

Everything you need, in the order you need it.

Read chapters 01–02 before installing: a multi-level robot behaves differently from a one-trade robot, and knowing how it works is the best risk control you have.

MT4 and MT5

Aurion is available for MetaTrader 4 and MetaTrader 5. This guide shows MT4 screens. On MT5 every step is the same — the folder is called `MQL5` instead of `MQL4`, and the file ends in `.ex5` instead of `.ex4`.

01 / OVERVIEW

Meet Aurion.

Aurion is an automated gold (XAUUSD) robot built on a **multi-level trading engine**. It opens a first trade only when market structure, trend, momentum, volatility, liquidity and session timing line up. If price moves against it, it can add further levels — but only when its technical conditions confirm again — and closes them together as one basket.

SYMBOL	CHART TIMEFRAME	PLATFORM
XAUUSD	**M15**	**MT4 & MT5**
Gold — one chart only	15-minute chart	Same steps on both

MINIMUM DEPOSIT	LEVERAGE	ACCOUNT TYPE
$1,000+	**1:400 or higher**	**ECN / RAW**
Room for several levels	Needed for margin on levels	Hedging account, low spread

Your path from zero to live

STEP 1	STEP 2	STEP 3	STEP 4	STEP 5
Broker	**VPS**	**Install**	**License**	**Go live**
ECN / RAW account, 1:400+	A server that runs MT 24/5	Copy the EA & allow xaubot.com	Paste your personal key	XAUUSD M15, AutoTrading on

What the robot does for you

- Finds selective gold entries on the M15 chart
- Manages up to 8 levels as one basket
- Adds levels only after technical re-confirmation
- Guards the account with a Max Drawdown limit
- Optional AI confirmation and news filter
- Pauses after each basket (cooldown)
- Shows a live dashboard with news and AI view

What you are responsible for

- Funding the account for the levels you allow (chapter 02)
- Choosing your Max Drawdown limit consciously
- A low-spread gold broker with 1:400+ leverage
- Keeping MetaTrader running 24/5 — on a VPS

Aurion is not a traditional martingale, but it does add larger positions when price moves against the first trade. Read chapter 02 before going live.

02 / HOW IT WORKS

How multi-level trading works.

Example with the default settings, for a buy basket. A sell basket is the mirror image.

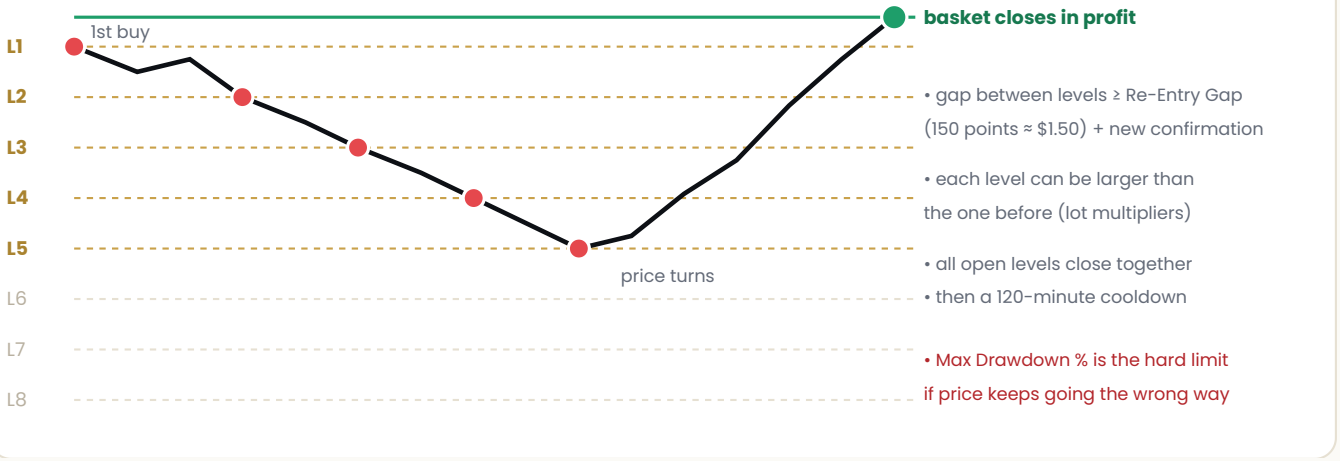

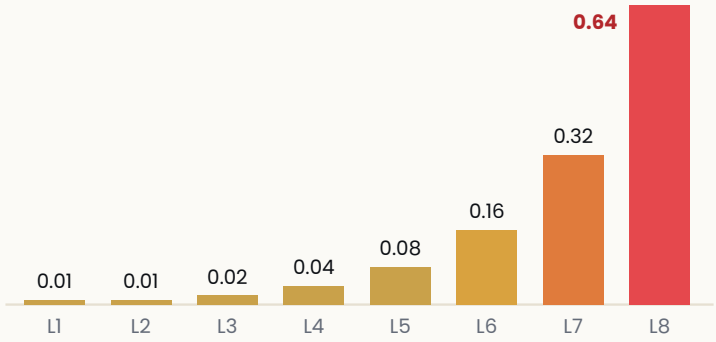

Illustration. Levels are opened only when Aurion's technical conditions confirm again — not automatically at every gap — so real spacing varies.

Lot size per level — default settings, 0.01 start

Second Tier Multiplier 1.0 (L2 = L1), Subsequent Tier Multiplier 2.0 (each next level doubles), Maximum 8 levels.

ALL 8 LEVELS OPEN

1.28 lots

128× the first trade

EACH FURTHER $1 GOLD MOVE

≈ $128

change in floating P&L at 1.28 lots

MOST BASKETS

Close at L1–L3

deep levels are the rare case — but plan for them

! **Size the account for the worst case, not the average one**

Gold can move tens of dollars in a single session. Your real protection is the combination of **starting lot**, **Maximum Number of Trade Levels** and **Max Drawdown %**. Fewer levels or a lower starting lot means less exposure; a lower Max Drawdown % means a bad basket is closed sooner (at a smaller, realised loss).

03 / PREPARATION

Before you start.

Have these five things ready. It takes about 15 minutes to go from here to a live robot.

1

A gold trading account

ECN / RAW account, hedging, leverage **1:400 or higher**, at least **$1,000**. A demo account is perfect for your first week. See chapter 10.

2

MetaTrader 4 or 5

Download it from your broker's website and log in with your account number and password.

3

The Aurion file

`Aurion_MT4.ex4` (or `Aurion_MT5.ex5`) — sent after purchase, or installed from the MQL5 Market.

4

Your license key

Requested in private chat after purchase, linked to your account number(s). See chapter 05.

5

A VPS (strongly recommended)

A multi-level basket can stay open for hours. If MetaTrader is closed while levels are open, nothing manages them — including the hidden stop loss. A VPS keeps it online 24/5. See chapter 11.

Two ways to get the EA into MetaTrader

Method A · Shown in this guide

Copy the file into the Experts folder

Use this when you received the Aurion file directly. Follow chapter 04 from step 1.

Method B · MQL5 Market purchase

Install from inside MetaTrader

1. Log in to your MQL5 account: **Tools › Options › Community**.
2. Terminal window › **Market** tab › **Purchased**.
3. Click **Install** next to Aurion, then continue from **step 5** of chapter 04.

✓ **Start on a demo or with the minimum lot**

Run Aurion for at least one to two weeks at 0.01 (or on a demo) so you see how baskets build and close at your broker. Increase size only after you have watched it handle a deeper basket.

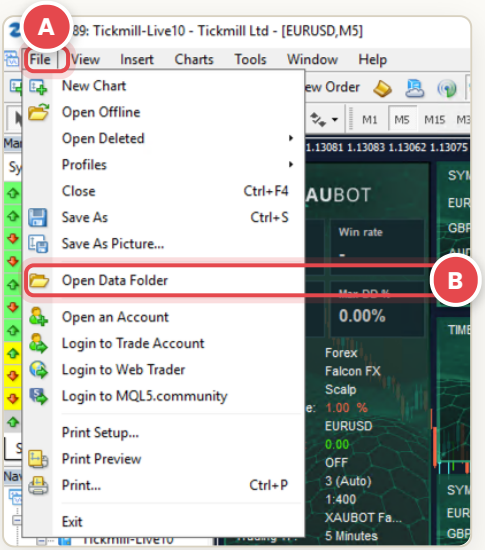

04 / INSTALLATION · STEPS 1–2

Open the data folder.

MetaTrader keeps robots inside its own **data folder**. You open it directly from MetaTrader — no need to search your hard drive.

1 Click File › Open Data Folder

In the top menu, click **File**, then **Open Data Folder**. A Windows folder opens.

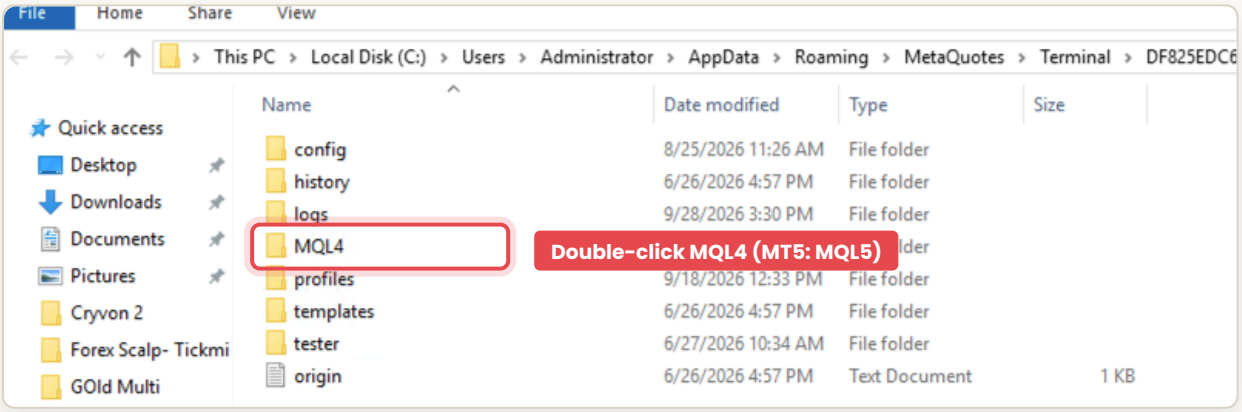

A — File menu
Top-left of the MetaTrader window.

B — Open Data Folder
Opens the folder where this terminal stores robots, indicators and logs.

✓ Several terminals?
Each terminal has its own data folder. Always open it from the terminal you will trade with.

2 Open the MQL4 folder

Inside the data folder you will see `config`, `history`, `logs` and `MQL4`. Double-click **MQL4** (on MT5: **MQL5**).

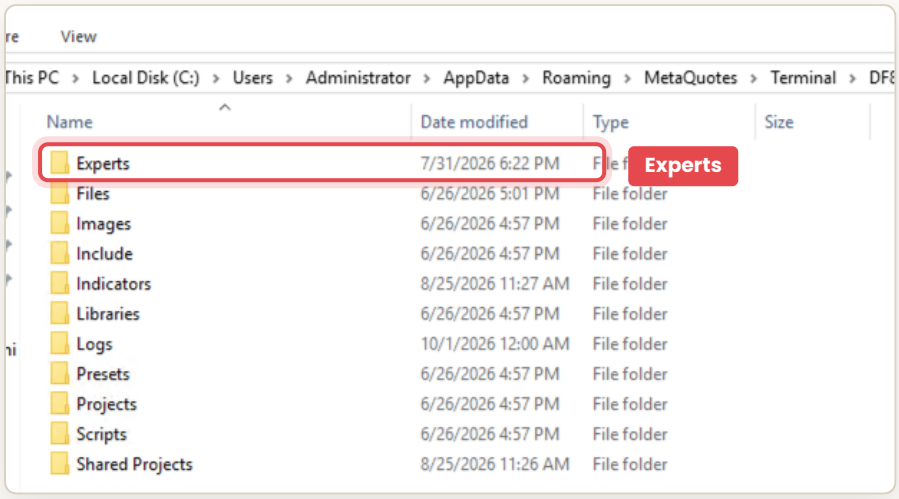

04 / INSTALLATION · STEPS 3–4

Paste Aurion into Experts.

3 Open the Experts folder

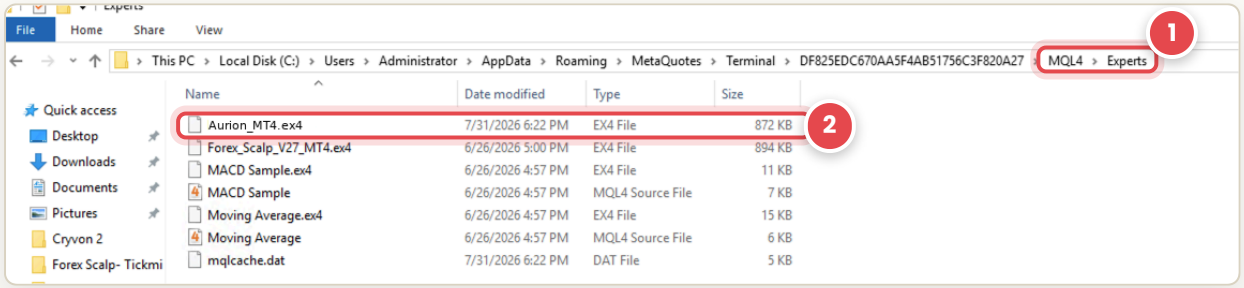

Inside `MQL4`, double-click **Experts**. This is where every Expert Advisor (robot) lives.

Not `Indicators` or `Scripts` — Aurion only works from `Experts`.

4 Paste the Aurion file

Copy `Aurion_MT4.ex4` from your Downloads and paste it into the **Experts** folder. If you received a .zip, extract it first — paste the `.ex4` file itself, not the zip.

1 You are in `…\MQL4\Experts` **2** The Aurion file is now in the folder.

✓ **Make it appear**

Back in MetaTrader, open the **Navigator** (Ctrl+N), right-click **Expert Advisors** › **Refresh**. Or close and reopen MetaTrader.

! **Updating with levels open?**

Wait until no Aurion basket is open, then remove the robot, overwrite the file, refresh and attach it again. Save your settings (.set) first.

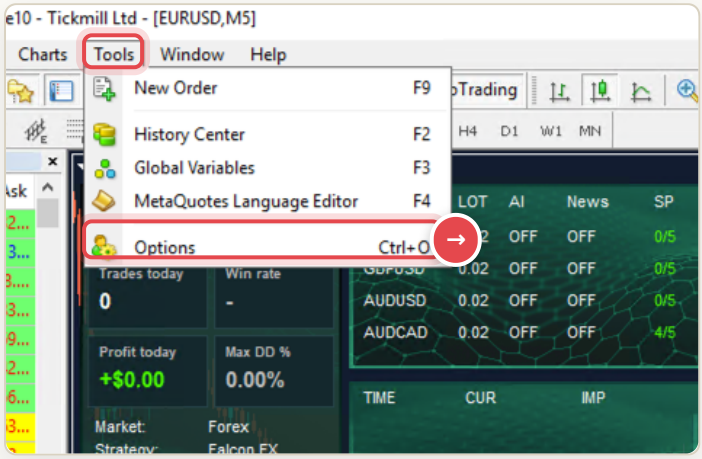

04 / INSTALLATION · STEPS 5–6

Allow xaubot.com & automated trading.

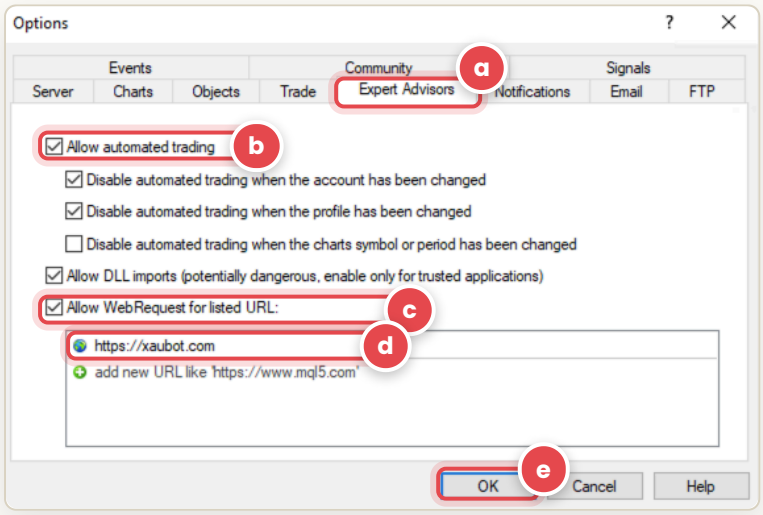

Aurion checks your license with the XAUBOT server, and its AI view and news panels also need internet access. MetaTrader blocks these requests unless you add the address to its allowed list.

5 Click Tools › Options

Or press **Ctrl+O**.

6 Expert Advisors tab — tick the boxes and add the URL

a Open the **Expert Advisors** tab.

b Tick **Allow automated trading**.

c Tick **Allow WebRequest for listed URL**.

d Double-click the green **+** row and type exactly:

```
https://xaubot.com
```

e Click **OK**.

"Allow DLL imports" is **not** required by Aurion.

! The #1 cause of "license" problems

If the URL is missing or mistyped (http instead of https, an extra space, a slash at the end), the robot cannot verify your key and will not trade. Copy it exactly: **https://xaubot.com**

04 / INSTALLATION · STEPS 7–9

Attach Aurion to a gold chart.

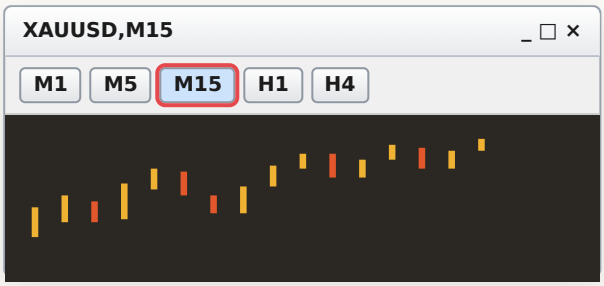

7 Open one XAUUSD chart on M15

In **Market Watch** (Ctrl+M) find gold — right-click › **Show All** if you can't see it. Drag it onto the workspace (or File › New Chart) and click **M15** on the toolbar.

Your broker may call gold:

XAUUSD · GOLD · XAUUSD.r · XAUUSDm · XAUUSD+ · XAUUSD.raw

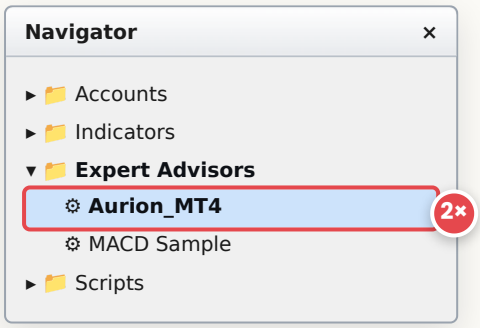

Any of these is fine — open the chart of the gold symbol on your account and Aurion trades that symbol.

Only **one** gold chart. Never attach Aurion to two charts, and never run it on two terminals for the same account.

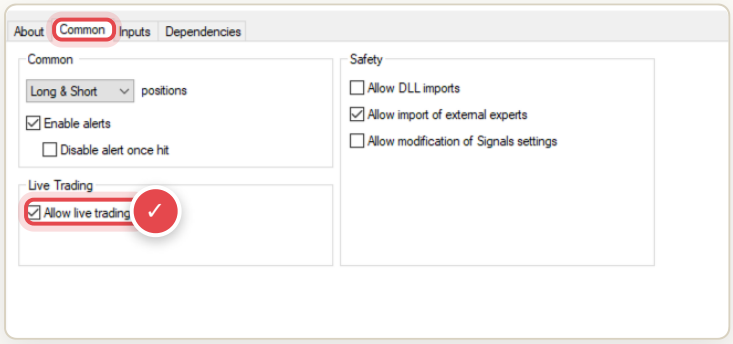

8 Double-click Aurion in the Navigator

Open the **Navigator** (Ctrl+N) › **Expert Advisors**. Double-click **Aurion_MT4** (or drag it onto the chart). The settings window opens.

Can't see it?
Right-click **Expert Advisors** › **Refresh**. Still missing? Check the file is in `MQL4\Experts` of *this* terminal (step 1).

9 Common tab — tick "Allow live trading"

Click the **Common** tab and make sure **Allow live trading** is ticked. Leave "Long & Short". Then open the **Inputs** tab for your license key and settings.

05 / LICENSE

Your license key.

Aurion only trades on account numbers registered to your license. After purchasing, request your key in private chat — it takes one message.

1 **Purchase** — Buy Aurion on the MQL5 Market or xaubot.com

2 **Message us** — Open a private chat with XAUBOT

3 **Send account numbers** — Every account you will trade on

4 **Receive key** — Paste it into "Input Your License Key"

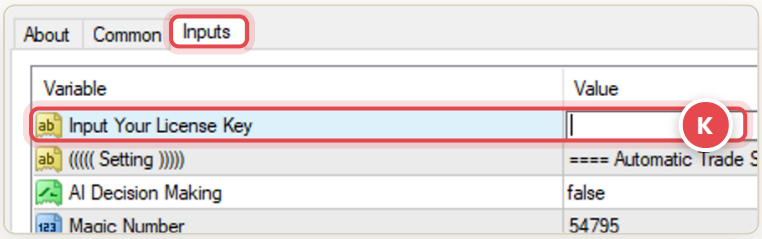

What to send in the private chat

Hello, I purchased **Aurion**.
MQL5 username / order: **your-name**
Broker: **your broker**
Platform: **MT4 / MT5**
Account number(s): **12345678**, **...**
Account type: **Live / Demo**
Please send my license key. Thank you!

Rules that avoid 90% of issues

- Send the **exact** account number(s) — the login number, not the server name.
- Include demo accounts too if you want to test on demo.
- New account later? Send the number before you attach the robot.
- Copy and paste the key — no spaces before or after.

Where to paste the key

1. In the robot window, open the **Inputs** tab.

2. Double-click the value next to **Input Your License Key** (K).

3. Paste your key and press **Enter**.

4. Review the other settings (chapter 06), then click **OK**.

Save it once
Click **Save** on the Inputs tab to store a .set file with your key and settings. Next time, click **Load**.

06 / SETTINGS REFERENCE · 1 OF 3

Settings, one by one.

Pips/Points on gold — quick conversion

Aurion's distance settings are in **points**. With gold quoted to 2 decimals (e.g. 4650.30): **100 points = $1.00** move in the gold price. At **0.01 lot**, a $1.00 move = **$1** profit or loss; at 0.10 lot = $10.

SETTING & DEFAULT	WHAT IT DOES	RECOMMENDATION
AUTOMATIC TRADE SETTING		
Input Your License Key `empty`	Your personal key, linked to your account numbers. Without it the robot will not trade.	Paste the key from private chat. No spaces.
AI Decision Making `false`	Adds the XAUBOT AI engine as an extra confirmation before entries. When on, the robot is more selective. Shown as "AI Decision" on the dashboard.	Leave false unless advised. True = fewer, stricter entries.
Magic Number `54795`	Marks Aurion's own trades so it never touches your manual trades or other robots.	Keep. Change only if another robot uses the same number.
Trade comments `XAUBOT Aurion`	Text written on every order so you can recognise Aurion trades in your history.	Any text. Does not affect trading.
MULTI-LEVEL STRATEGY SETTING		
Risk Level `Low Risk`	Risk preset that controls the size of the first trade relative to your account.	Low Risk while you learn, and for accounts near $1,000.
Fixed Lot Size `0.01`	The lot of the first level when a fixed lot is used. Every later level is calculated from it with the multipliers.	0.01 per $1,000–1,500 is a calm start.
Maximum Spread (Pips/Points) `30.0`	No new trade while the gold spread is wider than this. 30 points = $0.30.	Keep 30. The dashboard shows live spread as "SP 12/30".
Maximum Slippage (Pips/Points) `10`	The worst price difference accepted between requested and filled price.	Keep 10.
Initial Profit Target (Pips/Points) `200.0`	Profit target of the first trade. 200 points ≈ a $2.00 move in gold.	Keep 200.
Permission for Buy and Sell `Buy & Sell`	Allow both directions, buys only, or sells only.	Keep Buy & Sell.
Limits On `This Bot`	What the drawdown limit measures: Aurion's own trades only, or the whole account.	Keep This Bot, unless Aurion is alone on the account.
Max Drawdown % (maximum loss you're willing to tolerate) `50.0`	**Your master safety limit.** If Aurion's loss reaches this % of your balance, the Max Drawdown Action below is triggered. Shown in dollars on the dashboard as "DD limit".	**Choose consciously.** Lower = smaller worst case, but a basket that might have recovered gets closed at a loss.
Max Drawdown Action `Close all trades and stop trading until restart`	When the limit is hit, every Aurion trade is closed and the robot stops. It starts again only when you re-attach it or restart MetaTrader.	Keep. Review what happened before restarting.

06 / SETTINGS REFERENCE · 2 OF 3

Hours, levels & cooldown.

SETTING & DEFAULT	WHAT IT DOES	RECOMMENDATION
SYMBOL AND STRATEGY SETTING		
Start Trading (Hour) `0`	From this hour (broker server time) Aurion may open new baskets.	Keep 0.
End Trading (Hour) `23`	After this hour no new baskets start. Shown as "TIME OK" on the dashboard when inside the window.	Keep 23.
StopLoss for Grid (Pips/Points) `100000000.0`	A stop loss for the whole basket, in points. The default value is so large that it is effectively **off** — the protection is the Max Drawdown %.	Keep default and control risk with Max Drawdown %, or set your own basket stop in points.
Hidden StopLoss `true`	Stops are kept inside the robot and not sent to the broker. The robot closes the trades itself when the level is reached.	Keep true — and run on a VPS, because a hidden stop only works while MetaTrader is running.
Maximum Number of Trade Levels `8`	The most positions one basket can have. This is the biggest single driver of maximum exposure (chapter 02).	8 is the designed default. Fewer levels = less exposure and more baskets closed by the DD limit.
Re-Entry Gap (Pips/Points) `150`	Minimum distance between two levels. 150 points ≈ $1.50 in gold. A new level also needs fresh technical confirmation.	Keep 150.
Second Tier Lot Multiplier `1.0`	Lot of level 2 compared with level 1. 1.0 = same size.	Keep 1.0.
Subsequent Tier Lot Multiplier `2.0`	Each further level compared with the one before. 2.0 = doubles (0.02, 0.04, 0.08 …).	Keep 2.0. Never raise it without testing — exposure grows very fast.
CoolDown After Basket `true`	After a basket closes, Aurion waits before starting a new one, so it doesn't jump straight back into a hectic market.	Keep true.
Minutes for cooldown `120`	Length of the pause after each basket.	Keep 120.

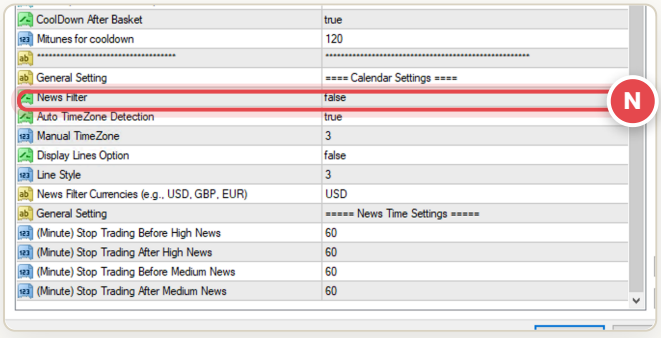

MAX LEVELS 8	MAX LEVELS 6	MAX LEVELS 5
1.28 lots	**0.32 lots**	**0.16 lots**
max total from 0.01	max total from 0.01	max total from 0.01

Total lots if every level opens, with multipliers 1.0 / 2.0 and a 0.01 first trade. Double the first lot and every number doubles.

06 / SETTINGS REFERENCE · 3 OF 3

Calendar & news.

SETTING & DEFAULT	WHAT IT DOES	RECOMMENDATION
CALENDAR SETTINGS		
News Filter `false`	When true, Aurion pauses new entries around economic news for the currencies below.	Consider true — gold reacts strongly to USD news such as NFP, CPI and Fed decisions.
Auto TimeZone Detection `true`	Detects your broker's server time zone automatically so news times line up. Dashboard: "GMT offset: 3 (Auto)".	Keep true.
Manual TimeZone `3`	Broker GMT offset used only when auto detection is off.	Only if auto is off: usually 3 in summer, 2 in winter.
Display Lines Option `false`	Draws vertical lines on the chart at upcoming news times.	Optional — set true if you like to see news on the chart.
Line Style `3`	Style of those news lines.	Cosmetic only.
News Filter Currencies `USD`	Which currencies' news to watch, separated by commas.	USD is the key one for gold.
NEWS TIME SETTINGS		
Stop Trading Before / After High News (min) `60 / 60`	Pause window around high-impact events.	Keep 60 / 60.
Stop Trading Before / After Medium News (min) `60 / 60`	Pause window around medium-impact events.	Keep 60 / 60.

Calendar part of the Inputs tab. **N** = News Filter.

Starter profile

Calm first weeks

- License key pasted
- Risk Level **Low Risk**, lot **0.01** per $1,000–1,500
- Max Drawdown % set to a loss you **accept**
- News Filter **true** (USD)
- Everything else: default

Change settings later

Press **F7** on the chart to reopen the Inputs. Best done when no basket is open.

07 / GO LIVE

Click OK — read the dashboard.

Check that the **AutoTrading** button is green and a smiling face ☺ shows in the chart's top-right corner. Then the XAUBOT dashboard tells you everything else.

1 · Status
Live = license verified and trading enabled. Version shown below.

2 · Today
Trades today, win rate, profit today and the max drawdown %.

3 · DD limit
Your Max Drawdown % converted to dollars for the current balance.

4 · Symbol row
LOT, DIR (**WAIT** = no setup yet), AI and News on/off, SP spread now / max, open P&L, TIME OK = inside trading hours, ML / MS checks ✓.

5 · News
Upcoming events and their impact (HIGH / MED), in server time.

6 · AI view
XAUBOT's AI read of gold's structure and trend (e.g. UpTrend) with last update time.

✓ **DIR shows WAIT? That's normal.**
Aurion is selective. It can wait hours for a valid setup, and skips wide spreads, news windows and the cooldown period.

! **Never close trades by hand mid-basket**
Closing one level manually breaks the basket's logic. If you want out, close all Aurion trades and remove the robot.

08 / STRATEGY TESTER · 1 OF 2

Run your own backtest.

A backtest replays historical gold prices to show how Aurion would have traded. Open the Strategy Tester with **View › Strategy Tester** or **Ctrl+R**.

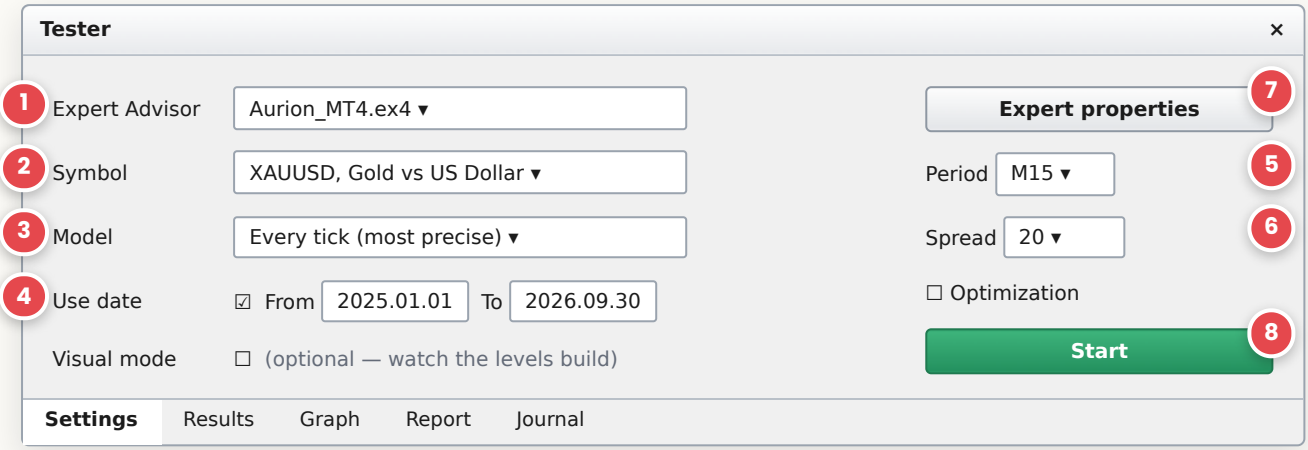

Illustration of the MT4 Strategy Tester with the fields you need to set.

1 · Expert Advisor — choose Aurion_MT4.

2 · Symbol — your broker's gold symbol.

3 · Model — **Every tick** for the most accurate result.

4 · Use date — tick it and pick at least 1 year.

5 · Period — **M15**, the robot's timeframe.

6 · Spread — a realistic gold spread, e.g. 15–25 points.

7 · Expert properties — Initial deposit (Testing tab, $1,000+) and your Inputs.

8 · Start — results appear in the tabs.

5 **On MetaTrader 5**
Same idea: pick Aurion, the gold symbol, M15, a date range, and choose **Every tick based on real ticks** as the modelling — it uses your broker's real gold spreads.

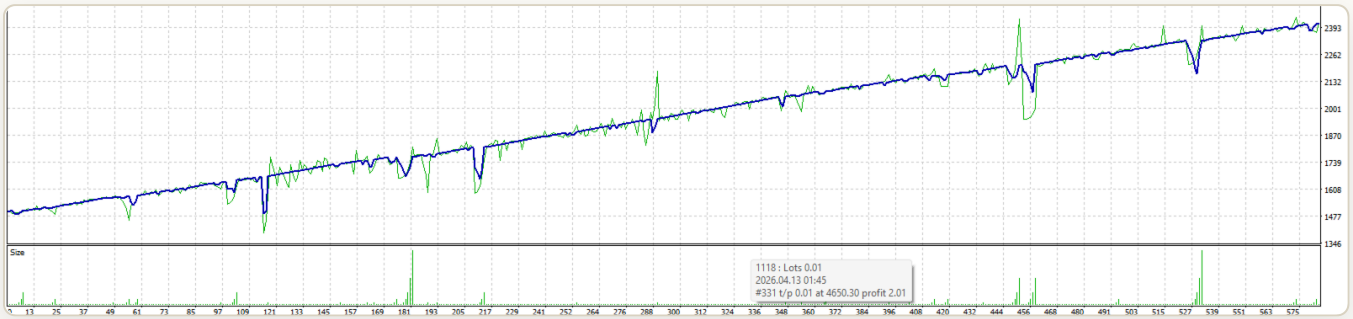

✓ **Test a hard period too**
For a multi-level robot the interesting question is not the average month — it's how deep the baskets went in strong one-way moves. Include a volatile period and look at the **Maximal drawdown** line in the report.

08 / STRATEGY TESTER · 2 OF 2

Read the results.

When the test finishes, open the **Graph** tab for the balance curve and the **Report** tab for the statistics. Below is an example Aurion test.

Graph tab — balance and equity

Blue = balance; green = equity (includes open levels). The green dips are open baskets in drawdown — the deeper the dip, the more levels were open. The lower panel shows lot size per trade: the tall bars are deep-level trades.

Report tab — key statistics

Initial deposit	1500.00		
Total net profit	914.21	Gross profit	2429.85
Profit factor	1.60	Expected payoff	1.57
Absolute drawdown	162.43	Maximal drawdown	332.13 (19.89%)
Total trades	583	Short positions (won %)	288 (76.74%)
		Profit trades (% of total)	481 (82.50%)
	Largest	profit trade	167.00
	Average	profit trade	5.05
	Maximum	consecutive wins (profit in money)	38 (226.51)
	Maximal	consecutive profit (count of wins)	239.65 (31)
	Average	consecutive wins	7

Spread	2
Gross loss	-1515.64
Relative drawdown	19.89% (332.13)
Long positions (won %)	295 (88.14%)
Loss trades (% of total)	102 (17.50%)
loss trade	-179.88
loss trade	-14.86
consecutive losses (loss in money)	5 (-130.51)
consecutive loss (count of losses)	-179.88 (1)
consecutive losses	2

NET PROFIT
+$914
on a $1,500 deposit

PROFIT FACTOR
1.60
gross profit ÷ gross loss

MAX DRAWDOWN
19.89 %
largest drop from a peak

WIN RATE
82.5 %
583 trades

Win rate isn't the whole story
Multi-level systems win often with small profits and lose less often with larger amounts (here: average win $5.05, average loss $14.86). Judge it by profit factor and drawdown, and remember a backtest is a simulation, not a promise.

▶ VIDEO WALKTHROUGH
Watch the Aurion backtest
youtube.com/watch?v=e5kmVUmBDK4

09 / TRANSPARENCY

Follow the live account.

Aurion's real-money account is tracked publicly on **Myfxbook**, an independent service that reads the trades directly from the broker. You can check its behaviour at any time.

MYFXBOOK · REAL ACCOUNT

Cryvon XAUBOT_2

RoboForex · MT5 · leverage 1:1000
Figures as of 2 October 2026

Gain	Drawdown	Win rate	Profit factor
+98.43 %	1.88 %	79.3 %	5.45

Trades	Avg. trade length	Profit	Withdrawals
455	31 min	$3,564	$7,500

How to read Myfxbook

Gain	Time-weighted return — deposits and withdrawals don't distort it.
Drawdown	Largest drop from a peak. For a multi-level robot, watch this most closely.
Profit factor	Gross profit ÷ gross loss.
Trades / Win rate	How many trades and the share closed in profit.
Broker & leverage	The conditions behind the results — yours may differ.

Past results on a live account do not guarantee future performance. Results depend on the broker, risk settings, timing and costs. Figures change daily — open the link for the current numbers.

10 / BROKER · 1 OF 2

Your gold broker matters.

Every level pays the spread, and a basket can hold several levels. Low spread and clean execution on gold add up quickly — and enough leverage keeps margin available when deeper levels open.

Spread cost per basket — same trades, two brokers

Low-cost gold account · 15 points

spread cost

most of the target is yours

On a 200-point target, a 15-point spread costs ~7.5 %.

High-cost gold account · 45 points

spread cost (+ slippage)

a large slice is gone

Same target, 45 points: ~22 %, and above the 30-point limit, so trades are skipped.

Illustrative numbers only.

Broker requirements

Low gold spread
Typically 10–25 points on XAUUSD — well below the 30-point limit.

Low slippage
Fast, stable execution, especially around news.

Leverage 1:400+
Needed for margin when several levels are open.

Hedging account
Positions are managed individually.

MT4 or MT5
Matching the Aurion build you received.

Regulated
A regulated, established broker protects your funds.

Leverage depends on where you live

Retail clients of some regulators (for example EU, UK, Australia) are limited to much lower leverage on gold. Check that your account can actually be opened with **1:400 or higher** before funding it.

10 / BROKER · 2 OF 2

Recommended brokers.

These brokers offer the conditions Aurion needs. The choice is always yours — any broker that meets the requirements on the previous page can work.

★ Used on the live track record

RoboForex

The Aurion Myfxbook account runs on RoboForex (MT5, leverage 1:1000). Choose an ECN-type account for raw gold pricing.

Account: ECN
Platform: MT4 / MT5
Leverage: 1:400+
Gold symbol: check for a suffix

Popular choice

Tickmill

Choose the **Raw** account: raw spreads plus commission, fast execution, multiple regulators.

Account: Raw
Platform: MT4 / MT5
Leverage: 1:400+ where available
Gold symbol: XAUUSD

Popular choice

IC Markets

One of the most widely used brokers for Expert Advisors. Choose the **Raw Spread** account.

Account: Raw Spread
Platform: MT4 / MT5
Leverage: 1:400+ where available
Gold symbol: XAUUSD

Opening your account — 4 steps

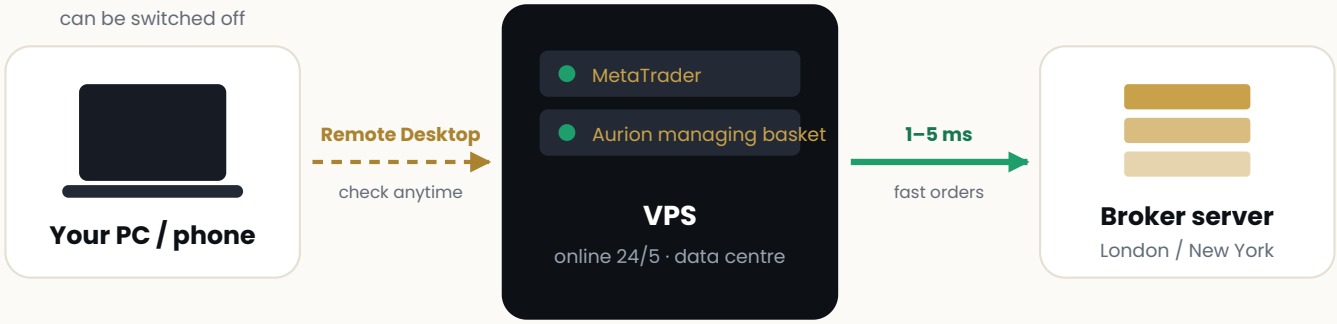

1. **Register** — Verify ID and address
2. **Open a Raw / ECN account** — MT4 or MT5, hedging, leverage 1:400+
3. **Deposit $1,000+** — Only money you can afford to lose
4. **Note your login** — Send the account number for your license

Broker suggestions are based on our experience and are not financial advice. Account names, leverage and conditions change and depend on your country — always check the broker's current offer and regulation.

11 / VPS · 1 OF 3

What is a VPS?

A **VPS (Virtual Private Server)** is a Windows computer in a data centre that never switches off. You install MetaTrader on it once, and Aurion keeps managing its baskets 24 hours a day, 5 days a week — even when your laptop is closed.

Baskets stay managed

Hidden stops, profit targets and the drawdown limit only work while MetaTrader runs.

Faster execution

Close to your broker's server — less slippage on gold.

Access from anywhere

Check it from Windows, Mac or your phone with a remote desktop app.

Three ways to get a VPS

OPTION	BEST FOR	COST	YOU SEE THE CHART?
A · Windows Forex VPS e.g. ForexVPS.net, NYC Servers, Contabo	Full control; see the XAUBOT dashboard and news panel	~$15–40 / month	Yes
B · MQL5 built-in VPS Rented from inside MetaTrader	Simplest setup — no remote desktop needed	$15 / month ($12.80 on yearly plan)	No — logs only
C · Free broker VPS Offered by some brokers	Clients who meet the broker's deposit or volume conditions	Free if eligible	Yes

Recommended for option A: Windows Server, 2 vCPU, 2–4 GB RAM, SSD, in the same city as your broker's server. Prices checked October 2026 and may change.

11 / VPS · 2 OF 3 — OPTION A

Buy & run a Windows VPS.

1 Choose a plan and order

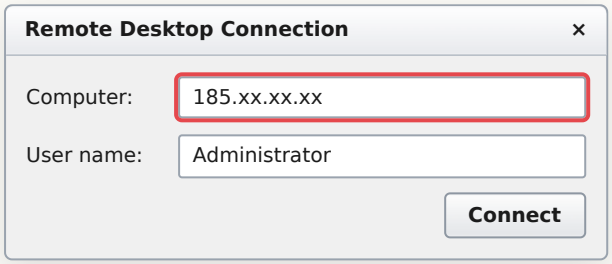

Pick a **Windows** plan (2 vCPU, 2–4 GB RAM) and the location **closest to your broker's server** (usually London or New York — ask your broker if unsure), then pay.

2 Receive your login details

Within minutes you get an email with three things:

IP address · 185.xx.xx.xx | **Username** · Administrator | **Password** · ••••••••

3 Connect with Remote Desktop

Windows: press Start, type **Remote Desktop Connection** (or `mstsc`), enter the IP, click Connect, type the password.

Mac / iPhone / Android: install Microsoft's **Windows App** (formerly "Remote Desktop"), add a PC with the IP and username.

4 Install MetaTrader and Aurion on the VPS

Inside the VPS, download MetaTrader from **your broker's website**, install it and log in. Then repeat **chapter 04** (steps 1–9) and paste your license key. Copy files from your PC to the VPS with normal copy & paste through the remote window.

5 Make MetaTrader start automatically

Press **Win + R**, type `shell:startup`, press Enter, and copy the MetaTrader shortcut into that folder. If the VPS restarts, MetaTrader opens again by itself with your chart and robot.

✓ **Leave correctly**
Close the remote window with the **X** at the top. MetaTrader keeps running on the VPS.

! **Never "Shut down" or "Sign out"**
Inside the VPS this stops MetaTrader. Also never run Aurion on your PC *and* the VPS at the same time.

11 / VPS · 3 OF 3 — OPTION B

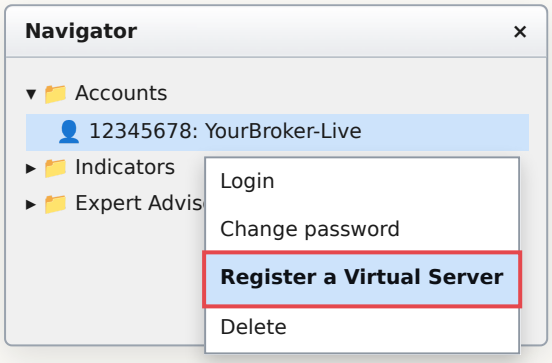

The MQL5 built-in VPS.

MetaQuotes rents a virtual server directly from your terminal. You set everything up on your own computer, then **migrate** it to the server.

1 Set up Aurion on your PC first

Finish chapters 04–06 locally: gold M15 chart, license key, settings, AutoTrading on, `https://xaubot.com` in the WebRequest list. Log in to your MQL5 account under **Tools › Options › Community**.

2 Register a Virtual Server

In the **Navigator**, right-click your **account number** › **Register a Virtual Server**. The terminal picks the server with the lowest ping to your broker. Choose a plan (1, 3, 6 or 12 months) and pay with your MQL5 account.

3 Migrate "Experts and indicators"

In the wizard, choose to migrate **Experts and indicators**. Your open charts, Aurion, its inputs and terminal settings (including the allowed WebRequest URL) are copied to the virtual server. Repeat every time you change settings.

4 Check the server log — then stop the local copy

Navigator › right-click your virtual server › **Journal**: confirm Aurion loaded without errors. Then **remove the robot from your local chart** so it doesn't trade twice.

No visible dashboard
The MQL5 VPS has no screen, so the news and AI panels aren't visible. You monitor trades through your account history and the server journal.

Changed a setting?
Change it locally, then migrate again. Settings changed only on your PC do not reach the server.

12 / TROUBLESHOOTING & FAQ

When something looks wrong.

Open the Terminal (Ctrl+T) › **Experts** and **Journal** tabs first — the reason is almost always written there.

YOU SEE	MOST LIKELY CAUSE	FIX
License error / dashboard not "Live"	URL missing or mistyped; key pasted with spaces; account number not registered.	Add **https://xaubot.com** (ch. 04 step 6). Re-paste the key. Send your exact account number in private chat.
Sad face ☹ on the chart	AutoTrading off, or "Allow live trading" unticked.	Click AutoTrading (green). F7 › Common › Allow live trading.
Aurion not in the Navigator	File in the wrong folder or wrong terminal (or .ex4 on MT5).	File › Open Data Folder › MQL4 › Experts. Refresh the Navigator.
DIR always WAIT, no trades	Normal waiting; spread above 30; news window; cooldown after a basket; outside trading hours; market closed.	Be patient. Check SP and TIME on the dashboard and the Experts log.
"Not enough money" / error 134	Not enough free margin for the next level — lot too large or leverage too low.	Lower the starting lot or Risk Level; use leverage 1:400+; or fewer levels.
All trades closed, robot stopped	Max Drawdown % reached — the action closes everything and stops until restart.	Review the basket, decide on your settings, then re-attach the robot.
News panel or AI view empty	WebRequest URL missing, or no internet on the VPS.	Check the URL list and the connection.
Trades doubled / strange behaviour	Robot on two charts, or running on PC and VPS at once.	One gold chart on one terminal only.

Quick answers

Is Aurion a martingale?
Not a traditional one — new levels need technical confirmation, not just a price move. But later levels are larger, so size the account for them.

Can I trade manually on the same account?
Yes — the magic number keeps them apart. Keep "Limits On: This Bot".

Does it work on prop firm accounts?
Check the firm's rules on EAs and grid strategies, and set Max Drawdown % below the firm's limits.

Can I trade other symbols?
Aurion is designed and tested for gold (XAUUSD) on M15 only.

I changed broker / account
Send the new account number in private chat to update your license.

When should I change settings?
When no basket is open. Changing lots or levels mid-basket gives unexpected results.

12 / BEFORE YOU LEAVE IT RUNNING

Final checklist.

Installation

- [x] `Aurion_MT4.ex4` in MQL4 › Experts
- [x] **https://xaubot.com** in the WebRequest list
- [x] Allow automated trading ticked
- [x] One XAUUSD **M15** chart, Allow live trading ticked
- [x] License key pasted — dashboard shows **Live**

Running safely

- [x] $1,000+ and leverage 1:400+
- [x] Starting lot sized for **all** levels (chapter 02)
- [x] Max Drawdown % chosen consciously
- [x] MetaTrader on a VPS, starting automatically
- [x] Only one copy of the robot running

SUPPORT

We're here to help.

Message us in **private chat on MQL5** (profile: XAUBOT) or visit **xaubot.com**. To get a fast answer, include:

- Broker and account number
- MT4 or MT5, local PC or VPS
- Screenshot of the dashboard
- Screenshot of the Experts tab

Risk disclaimer

Trading gold, Forex, CFDs and other leveraged instruments involves substantial risk and may result in the partial or complete loss of your capital. Only trade with money you can afford to lose.

Aurion is software that executes trades according to predefined rules, including adding positions at multiple price levels with increasing lot sizes. In strong one-directional markets this can lead to large losses, up to the Max Drawdown limit you set. No Expert Advisor or AI system can guarantee profits or avoid losses.

Backtest results are simulated: they are produced with the benefit of hindsight, do not include all real-market effects such as slippage, liquidity and variable spreads and commissions, and do not represent actual trading. Live track-record results reflect one account at one broker over a specific period; past performance is not indicative of future results.

Broker and VPS suggestions are based on experience and are not endorsements or financial advice. Conditions and prices can change. Nothing in this manual is investment advice. You are solely responsible for your trading decisions, settings and results, and for complying with the laws of your country.

XAUBOT and ADAK Fintech Ltd accept no liability for losses arising from the use of this software or this manual, including losses caused by connectivity problems, broker execution, software errors or user configuration.
