INSIDE THIS GUIDE

Everything you need, in the order you need it.

Read chapters 01–02 before installing: a multi-level robot behaves differently from a one-trade robot, and knowing how it works is the best risk control you have.

01	Meet Indiora What the robot does and what it needs	3
02	How multi-level trading works Levels, lot multipliers, baskets and exposure	4

MT4 and MT5

Indiora is available for MetaTrader 4 and MetaTrader 5. This guide shows MT4 screens. On MT5 every step is the same — the folder is called `MQL5` instead of `MQL4`, and the file ends in `.ex5` instead of `.ex4`.

01 / OVERVIEW

Meet Indiora.

Indiora is an automated robot for the **US30 (Dow Jones) index**, built on a **multi-level trading engine**. It opens a first trade only when market structure, trend, momentum, volatility and session timing line up. If price moves against it, it can add further positions — **mostly of the same size**, not doubled — but only after its conditions confirm again, and closes them together as one basket.

What the robot does for you

- ✓ Finds selective US30 entries on the M5 chart
- ✓ Adds equal-size levels only after re-confirmation
- ✓ Closes all levels together as one basket
- ✓ Guards the account with a Max Drawdown limit
- ✓ Optional AI confirmation and news filter
- ✓ Pauses 120 minutes after each basket
- ✓ Shows a live dashboard with news and AI view

What you are responsible for

- Checking your broker's **US30 contract size** (chapter 10)
- Funding the account for the levels you allow (chapter 02)
- Choosing your Max Drawdown limit consciously
- Keeping MetaTrader running 24/5 — on a VPS

Indiora is not a martingale — levels are not doubled — but it can hold many positions in one direction. Read chapter 02 before going live.

02 / HOW IT WORKS

How Indiora's levels work.

Default settings, buy basket. On a US30 quote with 2 decimals (e.g. 53,232.34), Indiora's **100 points = 1 index point**. The Re-Entry Gap of 10,000 points = **100 US30 points** between levels.

Illustration. With a 0.01 start, Level 2's $1.21 \times (0.0121)$ rounds to 0.01, so every level is 0.01. With larger lots, levels 2+ are about 21 % bigger than level 1 (e.g. $0.10 \rightarrow 0.12$).

How far US30 can move before your Max Drawdown limit closes the basket

US30 MOVE AGAINST	LEVELS OPEN	FLOATING LOSS (MAX.)
500 points	6	≈ \$15
1,000 points	11	≈ \$55
2,000 points	21	≈ \$210
3,000 points	31 (all)	≈ \$465
each further 100	31	+ ≈ \$31

\$100 ACCOUNT ~1,000 US30 points	\$500 ACCOUNT ~2,200 US30 points	\$1,000 ACCOUNT ~3,100 US30 points
--	--	--

Approximate adverse move before a **50 % Max Drawdown** closes the basket, at 0.01 lot per level.

Worst case, assuming levels open exactly every 100 points, 0.01 lot each, and a broker where **1 lot = \$1 per US30 point** (as on the live account). Real levels are often further apart, so real losses at a given move are usually smaller. Spread and swap not included.

Size the account for the worst case

US30 can move 1,000+ points in a day or two in volatile markets. Your protection is the combination of **lot size**, **Maximum Number of Trade Levels** and **Max Drawdown %**. Double the lot and every dollar figure above doubles.

03 / PREPARATION

Before you start.

Have these five things ready. It takes about 15 minutes to go from here to a live robot.

1

A US30 trading account

ECN / RAW account, hedging, leverage **1:400 or higher**, at least **\$100** (**\$500** recommended). A demo account is perfect for your first week. See chapter 10.

2

MetaTrader 4 or 5

Download it from your broker's website and log in with your account number and password.

3

The Indiora file

`Indiora_MT4.ex4` (or `Indiora_MT5.ex5`) – sent after purchase, or installed from the MQL5 Market.

4

Your license key

Requested in private chat after purchase, linked to your account number(s). See chapter 05.

5

A VPS (strongly recommended)

A multi-level basket can stay open for hours. If MetaTrader is closed while levels are open, nothing manages them – including the hidden stop loss. A VPS keeps it online 24/5. See chapter 11.

Two ways to get the EA into MetaTrader

Method A · Shown in this guide

Copy the file into the Experts folder

Use this when you received the Indiora file directly. Follow chapter 04 from step 1.

Method B · MQL5 Market purchase

Install from inside MetaTrader

1. Log in to your MQL5 account: **Tools** › **Options** › **Community**.
2. Terminal window › **Market** tab › **Purchased**.
3. Click **Install** next to Indiora, then continue from **step 5** of chapter 04.

Start on a demo or with the minimum lot

Run Indiora for at least one to two weeks at 0.01 (or on a demo) so you see how baskets build and close at your broker. Increase size only after you have watched it handle a deeper basket.

04 / INSTALLATION · STEPS 1-2

Open the data folder.

MetaTrader keeps robots inside its own **data folder**. You open it directly from MetaTrader — no need to search your hard drive.

1

Click File › Open Data Folder

In the top menu, click **File**, then **Open Data Folder**. A Windows folder opens.

A

File menu

Top-left of the MetaTrader window.

B

Open Data Folder

Opens the folder where this terminal stores robots, indicators and logs.

Several terminals?

Each terminal has its own data folder. Always open it from the terminal you will trade with.

2

Open the MQL4 folder

Inside the data folder you will see `config`, `history`, `logs` and `MQL4`. Double-click **MQL4** (on MT5: **MQL5**).

04 / INSTALLATION · STEPS 3-4

Paste Indiora into Experts.

3

Open the Experts folder

Inside **MT4**, double-click **Experts**. This is where every Expert Advisor (robot) lives.

Not **Indicators** or **Scripts** — Indiora only works from **Experts**.

4

Paste the Indiora file

Copy **Indiora_MT4.ex4** from your Downloads and paste it into the **Experts** folder. If you received a .zip, extract it first — paste the **.ex4** file itself, not the zip.

1 You are in **...\\MT4\\Experts** 2 The Indiora file is now in the folder.

Make it appear

Back in MetaTrader, open the **Navigator** (Ctrl+N), right-click **Expert Advisors** > **Refresh**. Or close and reopen MetaTrader.

Updating with levels open?

Wait until no Indiora basket is open, then remove the robot, overwrite the file, refresh and attach it again. Save your settings (.set) first.

04 / INSTALLATION · STEPS 5-6

Allow xaubot.com & automated trading.

Indiora checks your license with the XAUBOT server, and its AI view and news panels also need internet access. MetaTrader blocks these requests unless you add the address to its allowed list.

5

Click Tools › Options

Or press **Ctrl+O**.

6

Expert Advisors tab — tick the boxes and add the URL

a Open the **Expert Advisors** tab.

b Tick **Allow automated trading**.

c Tick **Allow WebRequest for listed URL**.

d Double-click the green **+** row and type exactly:

`https://xaubot.com`

e Click **OK**.

“Allow DLL imports” is **not** required by Indiora.

The #1 cause of “license” problems

If the URL is missing or mistyped (http instead of https, an extra space, a slash at the end), the robot cannot verify your key and will not trade. Copy it exactly: **https://xaubot.com**

04 / INSTALLATION · STEPS 7–9

Attach Indiora to a US30 chart.

7

Open one US30 chart on M5

In **Market Watch** (Ctrl+M) find the Dow Jones index — right-click › **Show All** if you can't see it. Drag it onto the workspace (or File › New Chart) and click **M5** on the toolbar.

Your broker may call it:

US30

DJ30

WS30

US30.cash

DJI30

USA30

Any of these is fine — open the Dow Jones chart on your account and Indiora trades that symbol. Use the **cash / spot** index, not a dated future.

Only **one** US30 chart. Never attach Indiora to two charts, and never run it on two terminals for the same account.

8

Double-click Indiora in the Navigator

Open the **Navigator** (Ctrl+N) › **Expert Advisors**. Double-click **Indiora_MT4** (or drag it onto the chart). The settings window opens.

Can't see it?

Right-click **Expert Advisors** › **Refresh**. Still missing? Check the file is in **MQL4\Experts** of *this* terminal (step 1).

9

Common tab — tick “Allow live trading”

Click the **Common** tab and make sure **Allow live trading** is ticked. Leave “Long & Short”. Then open the **Inputs** tab for your license key and settings.

05 / LICENSE

Your license key.

Indiora only trades on account numbers registered to your license. After purchasing, request your key in private chat — it takes one message.

Where to paste the key

1. In the robot window, open the **Inputs** tab.
2. Double-click the value next to **Input Your License Key (K)**.
3. Replace the “-” with your key and press **Enter**.
4. Review the other settings (chapter 06), then click **OK**.

Save it once

Click **Save** on the Inputs tab to store a .set file with your key and settings. Next time, click **Load**.

06 / SETTINGS REFERENCE · 1 OF 3

Settings, one by one.

Pips/Points on US30 — quick conversion

Indiora's distances are in **points**. On a US30 quote with 2 decimals: **100 points = 1 index point**. With 1 lot = \$1 per index point, **0.01 lot** earns or loses **\$0.01 per index point** — \$1 per 100 points.

SETTING & DEFAULT	WHAT IT DOES	RECOMMENDATION
AUTOMATIC TRADE SETTING		
Input Your License Key -	Your personal key, linked to your account numbers. Without it the robot will not trade.	Replace “-” with your key. No spaces.
AI Decision Making false	Adds the XAUBOT AI engine as an extra confirmation before entries. When on, the robot is more selective. Shown as “AI Decision” on the dashboard.	Leave false unless advised. True = fewer, stricter entries.
Magic Number 54795	Marks Indiora's own trades so it never touches your manual trades or other robots.	Keep. Change it if you also run Aurion on the same account — both use 54795 by default.
Trade comments XAUBOT Indiora	Text written on every order so you can recognise Indiora trades in your history.	Any text. Does not affect trading.
MULTI-LEVEL STRATEGY SETTING		
Fixed Lot Size 0.01	The lot of the first level. Every later level is calculated from it with the multipliers.	0.01 per \$100–500. Check your contract size first (ch. 10).
Maximum Spread (Pips/Points) 250.0	No new trade while the US30 spread is wider than this. 250 points = 2.5 index points. Dashboard: “SP 120/250”.	Keep 250.
Maximum Slippage (Pips/Points) 50	The worst price difference accepted between requested and filled price (0.5 index points).	Keep 50.
Initial Profit Target (Pips/Points) 2000.0	Profit target of the first trade: 2,000 points = 20 US30 points (≈ \$0.20 at 0.01 lot).	Keep 2000.
Permission for Buy and Sell Buy & Sell	Allow both directions, buys only, or sells only.	Keep Buy & Sell.
Limits On This Bot	What the drawdown limit measures: Indiora's own trades only, or the whole account.	Keep This Bot, unless Indiora is alone on the account.
Max Drawdown % (maximum loss you're willing to tolerate) 50.0	Your master safety limit. If Indiora's loss reaches this % of your balance, the action below is triggered. Shown in dollars on the dashboard as “DD limit”.	Choose consciously (see page 4). Lower = smaller worst case, but more baskets closed at a loss.
Max Drawdown Action Close all trades and stop trading until restart	When the limit is hit, every Indiora trade is closed and the robot stops until you re-attach it or restart MetaTrader.	Keep. Review what happened before restarting.

06 / SETTINGS REFERENCE · 2 OF 3

Hours, levels & cooldown.

SETTING & DEFAULT	WHAT IT DOES	RECOMMENDATION
SYMBOL AND STRATEGY SETTING		
Start Trading (Hour) 0	From this hour (broker server time) Indiora may open new baskets.	Keep 0.
End Trading (Hour) 23	After this hour no new baskets start. Shown as "TIME OK" on the dashboard when inside the window.	Keep 23.
StopLoss for Grid (Pips/Points) 10000000000.0	A stop loss for the whole basket, in points. The default is so large that it is effectively off — the protection is the Max Drawdown %.	Keep default and control risk with Max Drawdown %, or set your own basket stop in points.
Hidden StopLoss true	Stops are kept inside the robot, not sent to the broker. The robot closes the trades itself.	Keep true — and run on a VPS, because a hidden stop only works while MetaTrader runs.
Maximum Number of Trade Levels 31	The most positions one basket can hold. Together with the lot size, this sets your maximum exposure ($31 \times 0.01 = 0.31$ lots).	31 is the designed default. Fewer levels = less exposure, but baskets get closed by the DD limit more often.
Re-Entry Gap (Pips/Points) 10000	Minimum distance between two levels: 10,000 points = 100 US30 points. A new level also needs fresh technical confirmation.	Keep 10000.
Second Tier Lot Multiplier 1.21	Lot of level 2 compared with level 1. At 0.01 it rounds to the same 0.01; at larger lots level 2 is ~21 % bigger.	Keep 1.21.
Subsequent Tier Lot Multiplier 1.0	Each further level compared with the one before. 1.0 = same size — no lot growth.	Keep 1.0. Raising it turns equal levels into growing levels — exposure rises very fast.
CoolDown After Basket true	After a basket closes, Indiora waits before starting a new one. Dashboard: "Cool Down READY" when it may trade again.	Keep true.
Minutes for cooldown 120	Length of the pause after each basket.	Keep 120.

MAX LEVELS 31

0.31 lots

max total at 0.01

MAX LEVELS 20

0.20 lots

max total at 0.01

MAX LEVELS 10

0.10 lots

max total at 0.01

Total lots if every level opens, at 0.01 per level. Because levels are equal, exposure grows in a straight line — not exponentially.

06 / SETTINGS REFERENCE · 3 OF 3

Calendar & news.

SETTING & DEFAULT	WHAT IT DOES	RECOMMENDATION
CALENDAR SETTINGS		
News Filter false	When true, Indiora pauses new entries around economic news for the currencies below.	Consider true — US30 reacts strongly to US news such as NFP, CPI and Fed decisions.
Auto TimeZone Detection true	Detects your broker's server time zone automatically so news times line up. Dashboard: "GMT offset: 3 (Auto)".	Keep true.
Manual TimeZone 3	Broker GMT offset used only when auto detection is off.	Only if auto is off: usually 3 in summer, 2 in winter.
Display Lines Option false	Draws vertical lines on the chart at upcoming news times.	Optional — set true if you like to see news on the chart.
Line Style 3	Style of those news lines.	Cosmetic only.
News Filter Currencies USD	Which currencies' news to watch, separated by commas.	USD is the key one for US30.
NEWS TIME SETTINGS		
Stop Trading Before / After High News (min) 60 / 60	Pause window around high-impact events.	Keep 60 / 60.
Stop Trading Before / After Medium News (min) 60 / 60	Pause window around medium-impact events.	Keep 60 / 60.

Calendar part of the Inputs tab. **N** = News Filter.

Starter profile

Calm first weeks

- ✓ License key pasted
- ✓ Lot **0.01** per \$100–500 (contract checked)
- ✓ Max Drawdown % set to a loss you **accept**
- ✓ News Filter **true** (USD)
- ✓ Everything else: default

Change settings later

Press **F7** on the chart to reopen the Inputs. Best done when no basket is open.

07 / GO LIVE

Click OK — read the dashboard.

Check that the **AutoTrading** button is green and a smiling face ☺ shows in the chart's top-right corner. Then the XAUBOT dashboard tells you everything else.

1 - Status

Live = license verified and trading enabled. Version shown below.

2 - Today

Trades today, win rate, profit today and max drawdown %.

3 - DD limit

Your Max Drawdown % in dollars for the current balance. Below: news filter, GMT offset, leverage, Trading TF (5 Minutes).

4 - Symbol row

LOT, DIR (**WAIT** = no setup yet), AI and News on/off, SP spread now / max, open P&L, TIME OK = inside trading hours, Cool Down READY = may start a basket.

5 - News

Upcoming events and their impact (HIGH / MED), in server time.

6 - AI view

XAUBOT's AI read of US30 (e.g. RANGE, UpTrend). "Waiting for AI analysis" right after start is normal.

DIR shows WAIT? That's normal.

Indiora is selective. It waits for valid setups, and skips wide spreads, news windows and the 120-minute cooldown.

Never close levels by hand mid-basket

Closing one level manually breaks the basket's logic. If you want out, close all Indiora trades and remove the robot.

08 / STRATEGY TESTER · 1 OF 2

Run your own backtest.

A backtest replays historical US30 prices to show how Indiora would have traded. Open the Strategy Tester with **View › Strategy Tester** or **Ctrl+R**.

The screenshot shows the 'Tester' window in MetaTrader 4. It has a 'Settings' tab selected, with other tabs being 'Results', 'Graph', 'Report', and 'Journal'. The settings are as follows:

- 1 Expert Advisor:** Indiora_MT4.ex4
- 2 Symbol:** US30, Dow Jones Industrial
- 3 Model:** Every tick (most precise)
- 4 Use date:** ☒ From 2025.01.01 To 2026.09.30
- Visual mode:** ☐ (optional — watch the levels build)
- Expert properties (7):**
 - 5 Period:** M5
 - 6 Spread:** 150
 - ☐ Optimization
- 8 Start:** A green button to start the backtest.

Illustration of the MT4 Strategy Tester with the fields you need to set.

1 • Expert Advisor — choose Indiora_MT4.

5 • Period — **M5**, the robot's timeframe.

2 • Symbol — your broker's US30 symbol.

6 • Spread — a realistic US30 spread, e.g. 100–200 points.

3 • Model — **Every tick** for the most accurate result.

7 • Expert properties — Initial deposit (Testing tab, \$100+, ideally \$500) and your Inputs.

4 • Use date — tick it and pick at least 1 year.

8 • Start — results appear in the tabs.

5

On MetaTrader 5

Same idea: pick Indiora, US30, M5, a date range, and choose **Every tick based on real ticks** as the modelling — it uses your broker's real US30 spreads.

Test a hard period too

For a multi-level robot the interesting question is not the average month — it's how deep the baskets went in strong one-way moves. Include a volatile period and look at the **Maximal drawdown** line in the report.

08 / STRATEGY TESTER · 2 OF 2

Read the results.

Example Indiora test in the **MT5** Strategy Tester on US30 M5, with 100 % history quality (real ticks). Judge it by profit factor and **equity** drawdown — a high win rate is normal for multi-level systems.

When Indiora trades

MT5 report charts: entries by hour, weekday and month (top); profitable (blue) vs losing (red) trades (bottom). Most entries come around the daily open and the US session.

09 / TRANSPARENCY

Follow it live — two ways.

Indiora runs on a real Tickmill account (MT5, 1:400) that is tracked by **two independent services**: an MQL5 signal and a verified Myfxbook account.

MQL5 signal page (September 2026).

LATEST FIGURES · 2 OCT 2026

MQL5 signal

Growth	Max drawdown
+83.65 %	24.88 %
Profit trades	PF · trades
84.75 %	3.44 · 269

Myfxbook

Gain	Drawdown
+90.20 %	18.68 %
Win rate	PF · trades
85 %	3.56 · 289

The two services calculate drawdown differently (equity vs balance-based), so the numbers differ slightly for the same account.

Past results do not guarantee future performance. Results depend on the broker, contract size, risk settings, timing and costs. Open the links for current numbers.

10 / BROKER · 1 OF 2

Check your US30 contract.

Index CFDs are **not standardised**. “0.01 lot of US30” is worth very different amounts at different brokers — and Indiora’s lot sizes, the table on page 4 and the dashboard all assume the contract below.

Like the live account · Tickmill

\$0.01

per US30 point at 0.01 lot · 1 lot = \$1 / point

Settings work as designed. 100-point move ≈ \$1 per level.

Example: larger contract

\$0.10

per US30 point at 0.01 lot · 1 lot = \$10 / point

Same settings = **10× the risk**. Every dollar figure on page 4 is ten times larger.

How to check it — 30 seconds

4

Deposit \$500

Only money you can afford to lose

Leverage depends on where you live

Retail clients of some regulators (for example EU, UK, Australia) are limited to much lower leverage on indices. Check that your account can be opened with **1:400 or higher** before funding it.

Broker suggestions are based on our experience and are not financial advice. Conditions change and depend on your country — always check the broker's current offer and regulation.

What is a VPS?

A **VPS (Virtual Private Server)** is a Windows computer in a data centre that never switches off. You install MetaTrader on it once, and Indiora keeps managing its baskets 24 hours a day, 5 days a week — even when your laptop is closed.

Baskets stay managed

Hidden stops, profit targets and the drawdown limit only work while MetaTrader runs.

Faster execution

Close to your broker's server — less slippage on gold.

Access from anywhere

Check it from Windows, Mac or your phone with a remote desktop app.

Three ways to get a VPS

OPTION	BEST FOR	COST	YOU SEE THE CHART?
A · Windows Forex VPS e.g. ForexVPS.net, NYC Servers, Contabo	Full control; see the XAUBOT dashboard and news panel	~\$15–40 / month	Yes
B · MQL5 built-in VPS Rented from inside MetaTrader	Simplest setup — no remote desktop needed	\$15 / month (\$12.80 on yearly plan)	No — logs only
C · Free broker VPS Offered by some brokers	Clients who meet the broker's deposit or volume conditions	Free if eligible	Yes

Recommended for option A: Windows Server, 2 vCPU, 2–4 GB RAM, SSD, in the same city as your broker's server. Prices checked October 2026 and may change.

11 / VPS · 2 OF 3 — OPTION A

Buy & run a Windows VPS.

1

Choose a plan and order

Pick a **Windows** plan (2 vCPU, 2–4 GB RAM) and the location **closest to your broker's server** (usually London or New York — ask your broker if unsure), then pay.

2

Receive your login details

Within minutes you get an email with three things:

IP address · 185.xx.xx.xx**Username** · Administrator**Password** ·

3

Connect with Remote Desktop

Remote Desktop Connection

Computer: 185.xx.xx.xx

User name: Administrator

Connect

Windows: press Start, type **Remote Desktop**

Connection (or `mstsc`), enter the IP, click Connect, type the password.

Mac / iPhone / Android: install Microsoft's **Windows App** (formerly "Remote Desktop"), add a PC with the IP and username.

4

Install MetaTrader and Indiora on the VPS

Inside the VPS, download MetaTrader from **your broker's website**, install it and log in. Then repeat **chapter 04** (steps 1–9) and paste your license key. Copy files from your PC to the VPS with normal copy & paste through the remote window.

5

Make MetaTrader start automatically

Press **Win + R**, type `shell:startup`, press Enter, and copy the MetaTrader shortcut into that folder. If the VPS restarts, MetaTrader opens again by itself with your chart and robot.

Leave correctly

Close the remote window with the **X** at the top. MetaTrader keeps running on the VPS.

Never "Shut down" or "Sign out"

Inside the VPS this stops MetaTrader. Also never run Indiora on your PC *and* the VPS at the same time.

11 / VPS · 3 OF 3 — OPTION B

The MQL5 built-in VPS.

MetaQuotes rents a virtual server directly from your terminal. You set everything up on your own computer, then **migrate** it to the server.

1

Set up Indiora on your PC first

Finish chapters 04–06 locally: US30 M5 chart, license key, settings, AutoTrading on, <https://xaubot.com> in the WebRequest list. Log in to your MQL5 account under **Tools › Options › Community**.

2

Register a Virtual Server

In the **Navigator**, right-click your **account number** › **Register a Virtual Server**. The terminal picks the server with the lowest ping to your broker. Choose a plan (1, 3, 6 or 12 months) and pay with your MQL5 account.

3

Migrate “Experts and indicators”

In the wizard, choose to migrate **Experts and indicators**. Your open charts, Indiora, its inputs and terminal settings (including the allowed WebRequest URL) are copied to the virtual server. Repeat every time you change settings.

4

Check the server log — then stop the local copy

Navigator › right-click your virtual server › **Journal**: confirm Indiora loaded without errors. Then **remove the robot from your local chart** so it doesn't trade twice.

i

No visible dashboard

The MQL5 VPS has no screen, so the news and AI panels aren't visible. You monitor trades through your account history and the server journal.

!

Changed a setting?

Change it locally, then migrate again. Settings changed only on your PC do not reach the server.

12 / TROUBLESHOOTING & FAQ

When something looks wrong.

Open the Terminal (Ctrl+T) › **Experts** and **Journal** tabs first — the reason is almost always written there.

YOU SEE	MOST LIKELY CAUSE	FIX
License error / dashboard not “Live”	URL missing or mistyped; key pasted with spaces or the “-” left in; account number not registered.	Add https://xaubot.com (ch. 04 step 6). Re-paste the key. Send your exact account number in private chat.
Sad face ☹ on the chart	AutoTrading off, or “Allow live trading” unticked.	Click AutoTrading (green). F7 › Common › Allow live trading.
Indiora not in the Navigator	File in the wrong folder or wrong terminal (or .ex4 on MT5).	File › Open Data Folder › MQL4 › Experts. Refresh.
DIR always WAIT, no trades	Normal waiting; spread above 250; news window; Cool Down not READY; outside trading hours; index market closed.	Be patient. Check SP, TIME and Cool Down on the dashboard.
Profit / loss per trade 10× bigger than expected	Your broker's US30 contract size is larger than 1.	Check the Specification (page 18) and contact support before continuing.
“Not enough money”	Not enough free margin for the next level.	Smaller lot, leverage 1:400+, or fewer levels.
All trades closed, robot stopped	Max Drawdown % reached — the action closes everything and stops until restart.	Review the basket and your settings, then re-attach the robot.
Trades mixed up with Aurion	Both robots use Magic Number 54795 by default.	Give Indiora a different Magic Number.

Quick answers

Is Indiora a martingale?

No. Levels keep the same size (multiplier 1.0) and need technical confirmation — but many levels in one direction still add up.

Can I trade manually on the same account?

Yes — the magic number keeps them apart. Keep “Limits On: This Bot”.

Does it work on prop firm accounts?

Check the firm's rules on EAs and grid strategies, and set Max Drawdown % below the firm's limits.

Can I trade other indices?

Indiora is designed and tested for US30 on M5 only.

I changed broker / account

Send the new account number (and the US30 Specification) in private chat.

When should I change settings?

When no basket is open. Changing lots or levels mid-basket gives unexpected results.

12 / BEFORE YOU LEAVE IT RUNNING

Final checklist.

Installation

- ✓ `Indiora_MT4.ex4` in MQL4 › Experts
- ✓ <https://xaubot.com> in the WebRequest list
- ✓ Allow automated trading ticked
- ✓ One US30 **M5** chart, Allow live trading ticked
- ✓ License key pasted — dashboard shows **Live**

Running safely

- ✓ \$100+ (\$500 rec.) and leverage 1:400+
- ✓ US30 contract size checked (chapter 10)
- ✓ Max Drawdown % chosen consciously
- ✓ MetaTrader on a VPS, starting automatically
- ✓ Only one copy of the robot running

SUPPORT

We're here to help.

- MT4 or MT5, local PC or VPS
- Screenshot of the Experts tab

Risk disclaimer

Trading indices, gold, Forex, CFDs and other leveraged instruments involves substantial risk and may result in the partial or complete loss of your capital. Only trade with money you can afford to lose.

Indiora is software that executes trades according to predefined rules, including adding positions at multiple price levels in the same direction. In strong one-directional markets this can lead to large losses, up to the Max Drawdown limit you set. No Expert Advisor or AI system can guarantee profits or avoid losses.

Backtest results are simulated: they are produced with the benefit of hindsight, do not include all real-market effects such as slippage, liquidity and variable spreads and commissions, and

do not represent actual trading. Live track-record results reflect one account at one broker over a specific period; past performance is not indicative of future results.

Broker and VPS suggestions are based on experience and are not endorsements or financial advice. Conditions and prices can change. Nothing in this manual is investment advice. You are solely responsible for your trading decisions, settings and results, and for complying with the laws of your country.

XAUBOT and ADAK Fintech Ltd accept no liability for losses arising from the use of this software or this manual, including losses caused by connectivity problems, broker execution, software errors or user configuration.
