MT4 and MT5

Razor Gold is available for MetaTrader 4 and MetaTrader 5. This guide shows MT4 screens. On MT5 every step is the same — the folder is called `MQL5` instead of `MQL4`, and the file ends in `.ex5` instead of `.ex4`.

01 / OVERVIEW

Meet Razor Gold.

Razor Gold is an automated **gold (XAUUSD) scalping robot**. It waits for qualified short-term setups — confirmed by trend, market structure, momentum, volatility, liquidity and spread checks — and trades them with a **defined stop loss on every trade**. No grid, no martingale.

What the robot does for you

- ✓ Finds selective breakout entries on gold
- ✓ Sizes every trade by your risk % and its stop loss
- ✓ Moves the stop to break-even, then trails it
- ✓ Pauses after losing streaks (Loss Lock)
- ✓ Stops for the day at your daily loss limit
- ✓ Skips wide spreads and optional news windows
- ✓ Shows a live dashboard with news and AI view

What you are responsible for

- A broker with a **low gold spread** — the #1 factor for a scalper
- Choosing a risk % you can live with in a losing run
- Keeping MetaTrader running 24/5 — on a VPS
- Starting small and increasing only after real results

No robot wins every trade. Losses and drawdowns are a normal part of trading.

02 / HOW IT WORKS

The life of a Razor Gold trade.

Example with the default settings, for a buy trade. On gold, Razor Gold's **1 pip = \$0.01** of price, so **100 pips = \$1.00**.

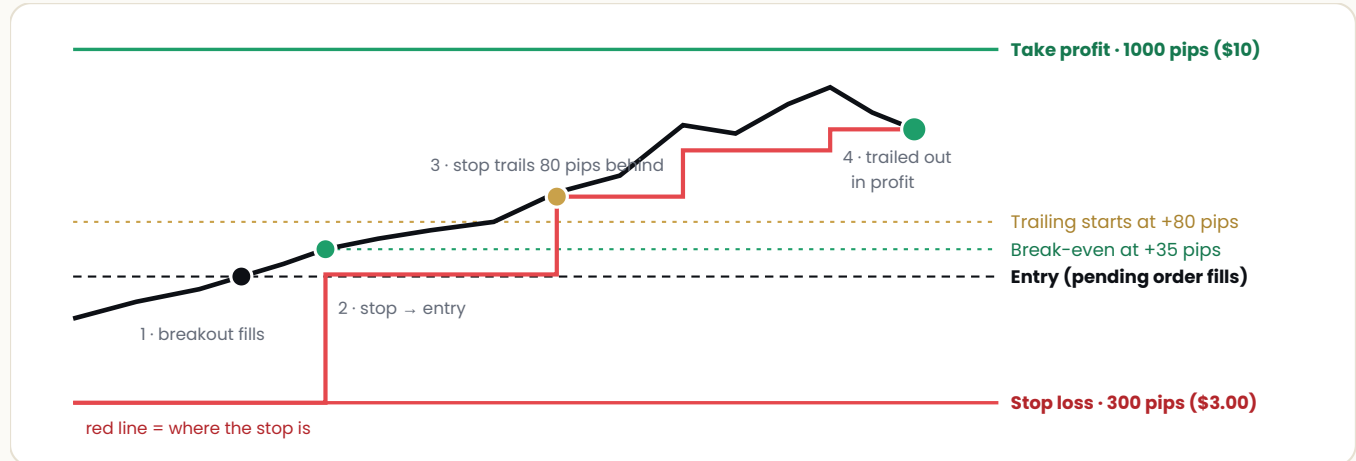

Illustration. Most trades end at the trailing or break-even stop, not at the full take profit. Distances are the default inputs.

Protection layers — what stops the robot from over-trading

EVERY TRADE Stop loss risk = your Risk Per Trade %	AFTER 2 LOSSES IN A ROW 12 h pause Loss Lock	DAILY -5 % stop Max Daily Loss	BETWEEN TRADES 15 min Cooldown
--	--	--	--

Which timeframe?

M5 More trades More frequent, shorter setups. Most sensitive to spread and execution — use only with a very low-spread account.	M15 · default Balanced The designed default and the best starting point for most users.	M30 Fewer, calmer trades Fewer signals and longer holding times; less affected by spread.
---	---	---

Pick one timeframe per account

Razor Gold trades the timeframe of the chart it is attached to. Backtest the timeframe you choose before going live (chapter 08).

03 / PREPARATION

Before you start.

Have these five things ready. It takes about 15 minutes to go from here to a live robot.

1

A gold trading account

ECN / RAW account with a low gold spread, leverage **1:20+** (1:100+ recommended), at least **\$100**. A demo account is perfect for your first week. See chapter 10.

2

MetaTrader 4 or 5

Download it from your broker's website and log in with your account number and password.

3

The Razor Gold file

`Razor Gold_MT4.ex4` (or `Razor Gold_MT5.ex5`) — sent after purchase, or installed from the MQL5 Market.

4

Your license key

Requested in private chat after purchase, linked to your account number(s). See chapter 05.

5

A VPS (strongly recommended)

Break-even, virtual trailing and pending orders are managed by the robot itself. If MetaTrader is closed, nothing manages them. A VPS keeps it online 24/5. See chapter 11.

Two ways to get the EA into MetaTrader

Method A · Shown in this guide

Copy the file into the Experts folder

Use this when you received the Razor Gold file directly. Follow chapter 04 from step 1.

Method B · MQL5 Market purchase

Install from inside MetaTrader

1. Log in to your MQL5 account: **Tools** › **Options** › **Community**.
2. Terminal window › **Market** tab › **Purchased**.
3. Click **Install** next to Razor Gold, then continue from **step 5** of chapter 04.

Start on a demo or with the minimum lot

Run Razor Gold for at least one to two weeks at 0.5 % risk (or on a demo) to see how your broker fills its orders. Increase risk only after you have seen real results.

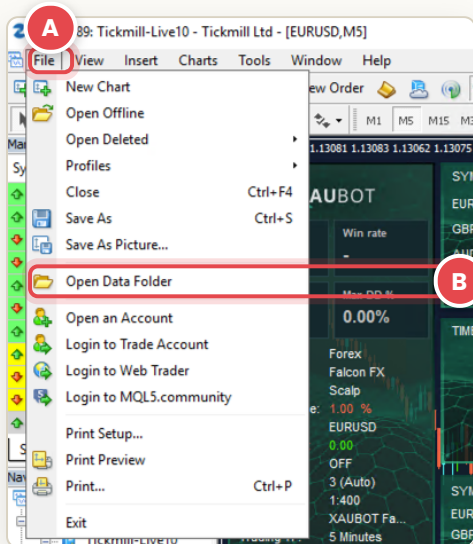

04 / INSTALLATION · STEPS 1-2

Open the data folder.

MetaTrader keeps robots inside its own **data folder**. You open it directly from MetaTrader — no need to search your hard drive.

1 Click File › Open Data Folder

In the top menu, click **File**, then **Open Data Folder**. A Windows folder opens.

A File menu

Top-left of the MetaTrader window.

B Open Data Folder

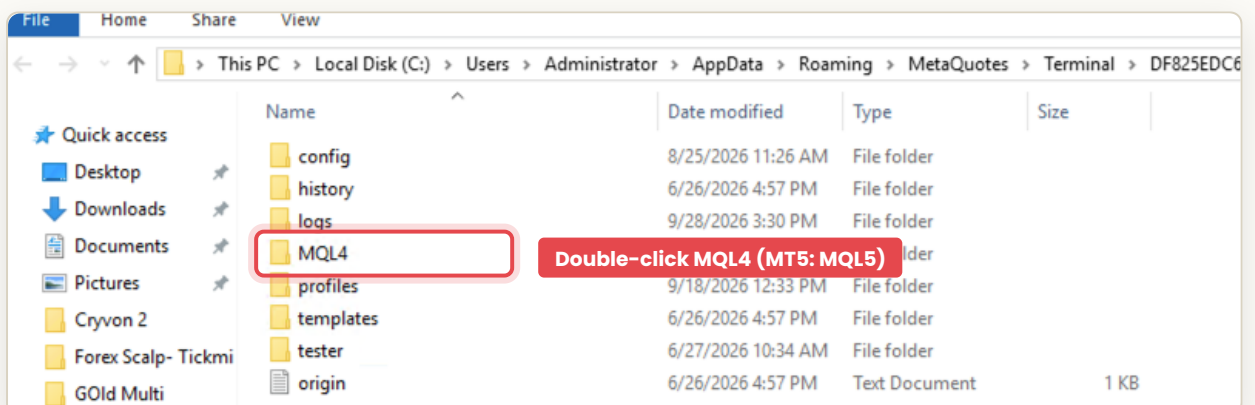

Opens the folder where this terminal stores robots, indicators and logs.

✓ Several terminals?

Each terminal has its own data folder. Always open it from the terminal you will trade with.

2 Open the MQL4 folder

Inside the data folder you will see `config`, `history`, `logs` and `MQL4`. Double-click **MQL4** (on MT5: **MQL5**).

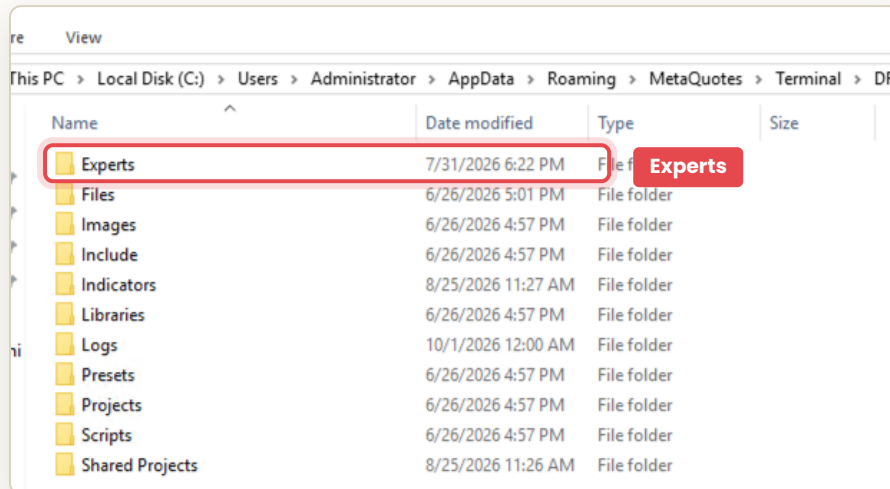

04 / INSTALLATION · STEPS 3-4

Paste Razor Gold into Experts.

3

Open the Experts folder

Inside **MT4**, double-click **Experts**. This is where every Expert Advisor (robot) lives.

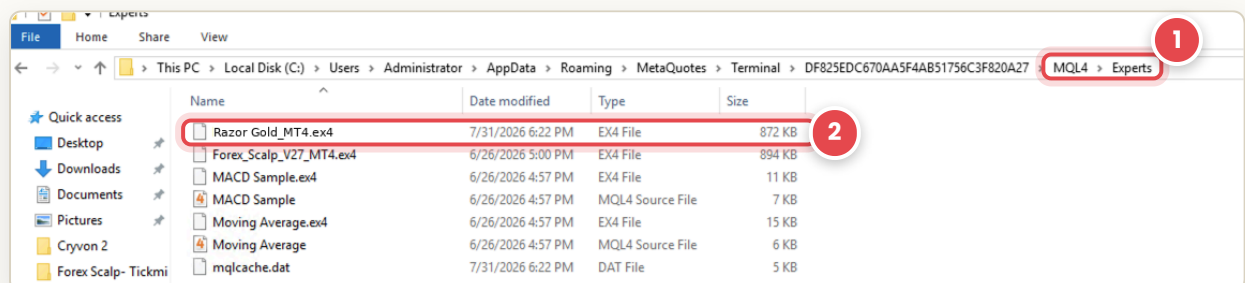

Not **Indicators** or **Scripts** — Razor Gold only works from **Experts**.

4

Paste the Razor Gold file

Copy **Razor Gold_MT4.ex4** from your Downloads and paste it into the **Experts** folder. If you received a .zip, extract it first — paste the **.ex4** file itself, not the zip.

1 You are in **... \MQL4 \Experts** 2 The Razor Gold file is now in the folder.

Make it appear

Back in MetaTrader, open the **Navigator** (Ctrl+N), right-click **Expert Advisors** > **Refresh**. Or close and reopen MetaTrader.

Updating with trades open?

Wait until no Razor Gold trade or pending order is open, then remove the robot, overwrite the file, refresh and attach it again. Save your settings (.set) first.

04 / INSTALLATION · STEPS 5-6

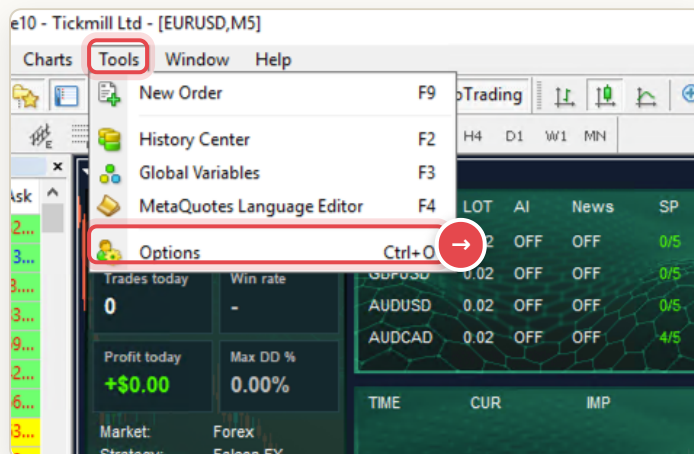

Allow xaubot.com & automated trading.

Razor Gold checks your license with the XAUBOT server, and its AI view and news panels also need internet access. MetaTrader blocks these requests unless you add the address to its allowed list.

5

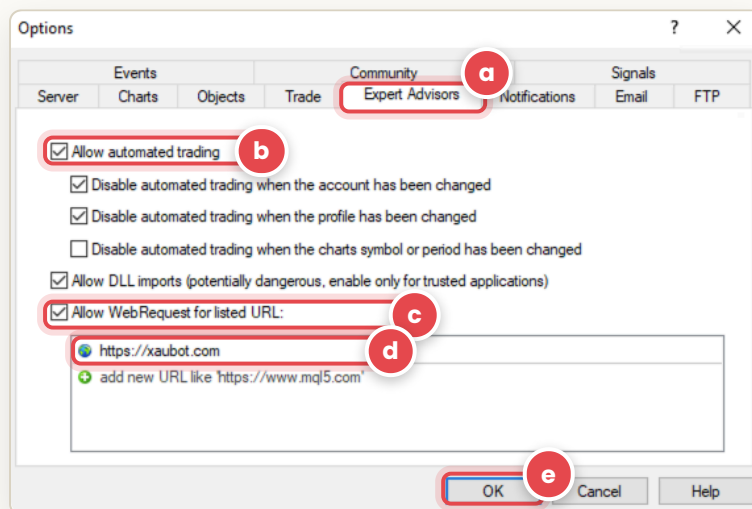

Click Tools › Options

Or press **Ctrl+O**.

6

Expert Advisors tab — tick the boxes and add the URL

a Open the **Expert Advisors** tab.

b Tick **Allow automated trading**.

c Tick **Allow WebRequest for listed URL**.

d Double-click the green **+** row and type exactly:

`https://xaubot.com`

e Click **OK**.

“Allow DLL imports” is **not** required by Razor Gold.

The #1 cause of “license” problems

If the URL is missing or mistyped (http instead of https, an extra space, a slash at the end), the robot cannot verify your key and will not trade. Copy it exactly: **https://xaubot.com**

04 / INSTALLATION · STEPS 7–9

Attach Razor Gold to a gold chart.

7 Open one XAUUSD chart on M15 (or M5 / M30)

In **Market Watch** (Ctrl+M) find gold — right-click › **Show All** if you can't see it. Drag it onto the workspace (or File › New Chart) and click **M15** on the toolbar (or M5 / M30 — see chapter 02).

Your broker may call gold:

XAUUSD **GOLD** **XAUUSD.r** **XAUUSDM**
XAUUSD+ **XAUUSD.raw**

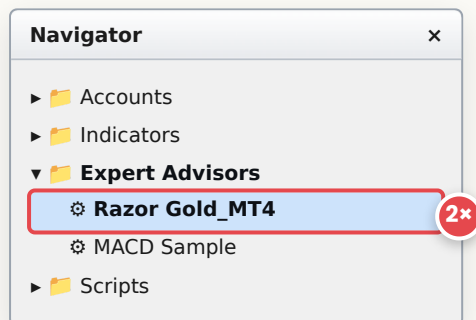

Any of these is fine — open the chart of the gold symbol on your account and Razor Gold trades that symbol.

Only **one** gold chart. Never attach Razor Gold to two charts, and never run it on two terminals for the same account.

8 Double-click Razor Gold in the Navigator

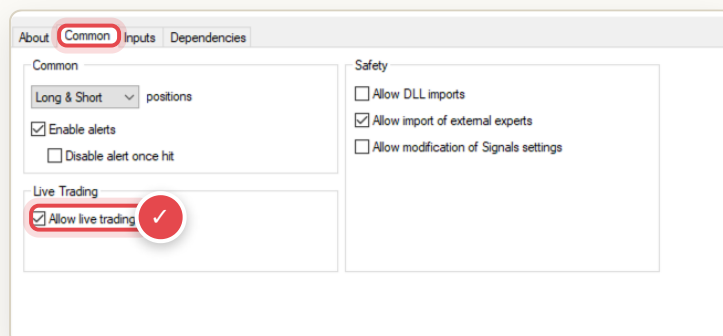

Open the **Navigator** (Ctrl+N) › **Expert Advisors**. Double-click **Razor Gold_MT4** (or drag it onto the chart). The settings window opens.

Can't see it?

Right-click **Expert Advisors** › **Refresh**. Still missing? Check the file is in **MQL4\Experts** of *this* terminal (step 1).

9 Common tab — tick “Allow live trading”

Click the **Common** tab and make sure **Allow live trading** is ticked. Leave “Long & Short”. Then open the **Inputs** tab for your license key and settings.

05 / LICENSE

Your license key.

Razor Gold only trades on account numbers registered to your license. After purchasing, request your key in private chat — it takes one message.

Paste it into "XAUBOT
License Key"

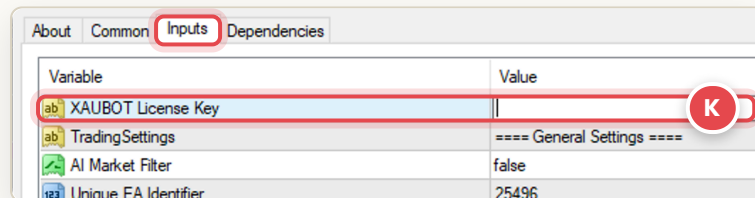

What to send in the private chat

Hello, I purchased **Razor Gold**.
MQL5 username / order: **your-name**
Broker: **your broker**
Platform: **MT4 / MT5**
Account number(s): **12345678, ...**
Account type: **Live / Demo**
Please send my license key. Thank you!

Rules that avoid 90% of issues

- ✓ Send the **exact** account number(s) — the login number, not the server name.
- ✓ Include demo accounts too if you want to test on demo.
- ✓ New account later? Send the number before you attach the robot.
- ✓ Copy and paste the key — no spaces before or after.

Where to paste the key

1. In the robot window, open the **Inputs** tab.
2. Double-click the value next to **XAUBOT License Key (K)**.
3. Paste your key and press **Enter**.
4. Review the other settings (chapter 06), then click **OK**.

Save it once

Click **Save** on the Inputs tab to store a .set file with your key and settings. Next time, click **Load**.

06 / SETTINGS REFERENCE · 1 OF 4

Settings, one by one.

Pips on gold — quick conversion

Razor Gold uses a pip size of **0.01** on gold: **100 pips = \$1.00** move in the gold price. At **0.01 lot** a \$1.00 move = **\$1**; at 0.10 lot = \$10.

SETTING & DEFAULT	WHAT IT DOES	RECOMMENDATION
GENERAL SETTINGS		
XAUBOT License Key empty	Your personal key, linked to your account numbers. Without it the robot will not trade.	Paste the key from private chat. No spaces.
AI Market Filter false	Adds the XAUBOT AI decision engine as an extra confirmation before entries. When on, the robot is more selective.	Leave false unless advised. True = fewer, stricter trades.
Unique EA Identifier 25496	The magic number that marks Razor Gold's trades, so it never touches your manual trades or other robots.	Keep. Change only if another robot uses it.
Trade Comment XAUBOT Razor Gold	Text written on every order so you can recognise the trades in your history.	Any text. Does not affect trading.
Maximum Spread (Pips) 20.0	No new trade while the gold spread is wider than this. 20 pips = \$0.20. The dashboard shows it as "SP 8/20".	Keep 20. If your broker is usually above it, change broker rather than raising it.
Maximum Slippage (Pips) 10	The worst price difference accepted between requested and filled price.	Keep 10.
Max Daily Loss (%) 5.0	If the day's loss reaches this % of the account, trading stops for the rest of the day (when Daily Loss Limit is on).	3–5 %. Prop accounts: below the firm's daily limit.
Lot Size Method Risk Based	Risk Based: the lot is calculated so that hitting the stop loss costs Risk Per Trade % of your balance. Fixed: always uses Fixed Lot Size.	Keep Risk Based. Lots grow and shrink with your balance.
Fixed Lot Size 0.01	Lot used on every trade when the method is Fixed.	Only used with Fixed lots.
Risk Per Trade (%) 1.0	How much of your balance one losing trade may cost. Shown on the dashboard as "Risk per trade".	0.5–1 % is conservative; above 2 % is aggressive.
Stop Loss (Pips) 300.0	Stop loss of every trade: 300 pips = \$3.00 of gold price.	Keep 300.
Take Profit (Pips) 1000.0	Maximum target: 1000 pips = \$10.00. Most trades exit earlier via break-even or trailing.	Keep 1000.

Worked example

Balance **\$1,000** × risk **1 %** = **\$10** at risk. Stop loss **\$3.00** → 1 lot would lose \$300, so the robot opens about **0.03 lot** ($\$10 \div \$300 \approx 0.033$, rounded down to your broker's lot step).

06 / SETTINGS REFERENCE · 2 OF 4

Trade control & entries.

SETTING & DEFAULT	WHAT IT DOES	RECOMMENDATION
TRADE CONTROL		
Enable Cooldown Period ☐ true	After a trade closes, the robot waits before opening the next one.	Keep true.
Cooldown Duration (Minutes) 15	Length of that pause.	Keep 15.
LOSS PROTECTION		
Enable Loss Lock ☐ true	Pauses trading after a losing streak, so the robot doesn't keep trading into a market that isn't suiting it.	Keep true.
Maximum Consecutive Losses 2	How many losses in a row trigger the lock.	Keep 2.
Lock Duration (Hours) 12	How long trading is paused after the lock triggers.	Keep 12.
DAILY PROTECTION		
Enable Daily Loss Limit ☐ true	Switches on the Max Daily Loss (%) limit from page 11.	Keep true.
Delete Pending Orders After High Spread (Minutes) 1	If the spread stays above the maximum for this long, waiting pending orders are deleted so they can't fill at a bad price.	Keep 1.
Spread Calculation Interval (Minutes) 60	The time window the robot uses to measure your broker's typical spread.	Keep 60.
ENTRY & REVERSAL STRATEGY		
Entry Strategy BreakoutOnly	Which entry logic is used. BreakoutOnly trades breakouts with pending orders. The reversal settings below apply only to modes that include reversal entries.	Keep BreakoutOnly — the default the robot is tested with.
Reversal Magic Number 985413	Separate magic number for reversal trades, so they're tracked apart from breakout trades.	Keep.
Reversal Zone Size (Pips) 100.0	Size of the price zone (100 pips = \$1.00) used to detect a reversal.	Keep 100.
Pending Order Distance (Pips) 60.0	How far from the current price the pending entry order is placed (60 pips = \$0.60).	Keep 60.
Pending Order Removal Distance (Pips) 100.0	If price moves this far away without filling the order, the order is removed.	Keep 100.
Waiting Candles Between Reversals 5	Minimum number of candles between two reversal entries.	Keep 5.

06 / SETTINGS REFERENCE · 3 OF 4

Trailing stop & break-even.

SETTING & DEFAULT	WHAT IT DOES	RECOMMENDATION
TRAILING STOP		
Enable Trailing Stop ☐ true	Lets the stop follow price once a trade is in profit, locking in gains.	Keep true.
Trailing Stop Distance (Pips) 80.0	How far behind price the stop is kept (80 pips = \$0.80).	Keep 80.
Virtual Trailing Distance (Pips) 80.0	The same idea, but the trailing level is kept inside the robot (hidden from the broker) and the robot closes the trade itself.	Keep 80 — and run on a VPS, since virtual levels only work while MetaTrader runs.
Virtual Trailing Start (Pips) 80.0	Profit needed before virtual trailing begins.	Keep 80.
Virtual Trailing Step (Pips) 1.0	The smallest move in price before the trailing level is updated.	Keep 1.0.
Minimum Trailing Distance 0.0	A floor for the trailing distance. 0 = no extra minimum.	Keep 0.
BREAK EVEN		
Enable Break Even ☐ true	Moves the stop to the entry price once the trade is far enough in profit, so a winner can't turn into a full loss.	Keep true.
Break Even Trigger (Pips) 35.0	Profit needed to move the stop to entry (35 pips = \$0.35).	Keep 35.
Break Even Offset (Pips) 0.1	The stop is placed this far beyond entry, to cover a tiny cost.	Keep 0.1.
Emergency Stop Buffer (Pips) 50.0	An extra safety stop at the broker, placed this far beyond the robot's own stop — a backup if MetaTrader loses connection.	Keep 50.
TIME SETTINGS		
GMT Offset 3	Your broker's server time difference from GMT, used for session timing and news times. The dashboard shows the detected value, e.g. "GMT offset: 3 (Auto)".	Usually 3 in summer, 2 in winter. Check the dashboard.

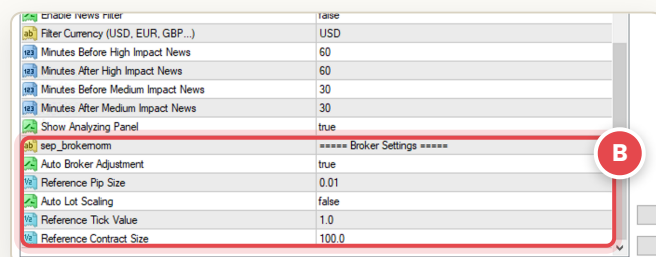

Spread Calculation Interval (Minutes)	60
reverse_st	===== Reversal Strategy =====
Entry Strategy	BreakoutOnly
Reversal Magic Number	985413
Reversal Zone Size (Pips)	100.0
Pending Order Distance (Pips)	60.0
Pending Order Removal Distance (Pips)	100.0
Waiting Candles Between Reversals	5
sep_trail	===== Trailing Stop =====

Middle of the Inputs tab. **E** = Entry Strategy.

06 / SETTINGS REFERENCE · 4 OF 4

News, display & broker.

SETTING & DEFAULT	WHAT IT DOES	RECOMMENDATION
NEWS FILTER		
Enable News Filter false	When true, pauses new entries around economic news for the currencies below.	Consider true — gold spikes on USD news (NFP, CPI, Fed).
Filter Currency (USD, EUR, GBP...) USD	Which currencies' news to watch, separated by commas.	USD is the key one for gold.
Minutes Before / After High Impact News 60 / 60	Pause window around high-impact events.	Keep 60 / 60.
Minutes Before / After Medium Impact News 30 / 30	Pause window around medium-impact events.	Keep 30 / 30.
Show Analyzing Panel true	Shows the XAUBOT dashboard on the chart (chapter 07).	Keep true. Hiding it does not stop trading.
BROKER SETTINGS		
Auto Broker Adjustment true	Adapts pip size and price digits automatically to how your broker quotes gold (2 or 3 decimals), so all distances mean the same everywhere.	Keep true.
Reference Pip Size 0.01	The pip size the settings are written for: 1 pip = \$0.01 of gold price.	Don't change.
Auto Lot Scaling false	When true, lots are adjusted for brokers whose gold contract is not the standard 100 oz per lot.	Keep false unless support advises it for your broker.
Reference Tick Value 1.0	Reference value of one tick per lot, used by the auto adjustments.	Don't change.
Reference Contract Size 100.0	Standard gold contract: 1 lot = 100 ounces.	Don't change.

End of the Inputs tab. **B** = Broker settings.

Starter profile

Calm first weeks

- ✓ License key pasted
- ✓ XAUUSD **M15** chart
- ✓ Risk Per Trade **0.5–1 %**
- ✓ Max Daily Loss **3–5 %**
- ✓ News Filter **true** (USD)
- ✓ Everything else: default

Press **F7** on the chart to reopen the inputs at any time.

07 / GO LIVE

Click OK — read the dashboard.

Check that the **AutoTrading** button is green and a smiling face 😊 shows in the chart's top-right corner. Then the XAUBOT dashboard tells you everything else.

1 - Status

Live = license verified and trading enabled. Version shown below.

2 - Today

Trades today, win rate, profit today and max drawdown %.

3 - Risk per trade

Your Risk Per Trade %. Below it: symbol, news filter, GMT offset, leverage and the chart timeframe in use.

4 - Symbol row

LOT, AI and News on/off, SP spread now / max, open P&L, TIME ON = inside trading time, SCORE and RISK = the engine's current assessment.

5 - News

Upcoming events and their impact (HIGH / MED), in server time.

6 - AI view

XAUBOT's AI read of gold's structure and trend (e.g. UpTrend) with last update time.

No trade yet? That's normal.

Razor Gold is selective. It can wait hours for a valid setup, and skips wide spreads, news windows, cooldowns and Loss Lock pauses.

Check the timeframe line

"Trading TF" on the dashboard must match the timeframe you chose (15 Minutes by default). Change the chart timeframe, not the inputs.

08 / STRATEGY TESTER · 1 OF 2

Run your own backtest.

A backtest replays historical gold prices to show how Razor Gold would have traded. Open the Strategy Tester with **View › Strategy Tester** or **Ctrl+R**.

The screenshot shows the 'Tester' window in MetaTrader 4. It has a title bar with a close button. The window is divided into two main sections. The left section contains fields for 'Expert Advisor' (set to 'Razor Gold_MT4.ex4'), 'Symbol' (set to 'XAUUSD, Gold vs US Dollar'), 'Model' (set to 'Every tick (most precise)'), and 'Use date' (checked, with 'From' date '2025.01.01' and 'To' date '2026.09.30'). Below these is a 'Visual mode' checkbox (unchecked) with the text '(optional — watch trades live)'. The right section is titled 'Expert properties' and contains 'Period' (set to 'M15'), 'Spread' (set to '20'), and an 'Optimization' checkbox (unchecked). At the bottom right of this section is a green 'Start' button. At the bottom of the window are five tabs: 'Settings' (selected), 'Results', 'Graph', 'Report', and 'Journal'. Red numbered circles (1-8) are overlaid on the interface: 1 points to the Expert Advisor field, 2 to the Symbol field, 3 to the Model field, 4 to the Use date checkbox, 5 to the Period field, 6 to the Spread field, 7 to the Expert properties title, and 8 to the Start button.

Illustration of the MT4 Strategy Tester with the fields you need to set.

1 • Expert Advisor — choose Razor Gold_MT4.

5 • Period — **M15** (or the M5 / M30 you trade).

2 • Symbol — your broker's gold symbol.

6 • Spread — a realistic gold spread, e.g. 15–25 points.

3 • Model — **Every tick** for the most accurate result.

7 • Expert properties — Initial deposit (Testing tab, \$100+) and your Inputs.

4 • Use date — tick it and pick at least 1 year.

8 • Start — results appear in the tabs.

5

On MetaTrader 5

Same idea: pick Razor Gold, the gold symbol, M15, a date range, and choose **Every tick based on real ticks** as the modelling — it uses your broker's real gold spreads.

Use your real spread

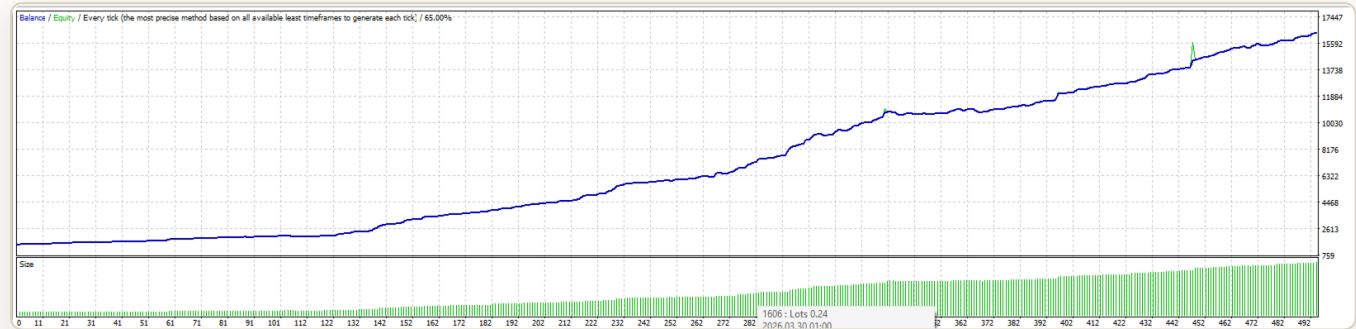

For a scalper the tester's spread setting changes the result more than anything else. Use your broker's typical gold spread (e.g. 15–25), not the lowest possible — and test the timeframe you will actually trade.

08 / STRATEGY TESTER · 2 OF 2

Read the results.

When the test finishes, open the **Graph** tab for the balance curve and the **Report** tab for the statistics. Below is an example Razor Gold test.

Graph tab — balance and lot size

Blue = balance; green = equity. The lower panel shows lot size per trade: with **Risk Based** lots, size grows as the balance grows — that is why the curve gets steeper over time.

Report tab — key statistics

Bars in test	13994	Ticks modelled	43774911
Mismatched charts errors	0		
Initial deposit	1500.00		
Total net profit	14810.70	Gross profit	16932.08

Past results on a live account do not guarantee future performance. Results depend on the broker, risk settings, timing and costs. Figures change daily — open the link for the current numbers.

10 / BROKER · 1 OF 2

Your broker decides a lot.

Razor Gold is a **scalper**. It trades often and exits early with break-even and trailing stops, so the spread you pay on every trade is a large part of the result. The same robot can perform very differently at two brokers.

Spread cost — same trades, two brokers

Low-cost gold account · 10 pips

\$1.00

per trade at 0.10 lot

300 trades ≈ **\$300** in spread.

High-cost gold account · 30 pips

\$3.00

per trade at 0.10 lot

300 trades ≈ **\$900** — and above the 20-pip limit, so many trades are skipped.

Illustrative numbers. 1 pip = \$0.01 of gold price; 0.10 lot = 10 oz.

Broker requirements

Low gold spread

Typically below 20 pips (\$0.20) on XAUUSD — the robot's limit.

Low slippage

Fast execution so pending orders and stops fill where expected.

Leverage 1:20+

1:100 or higher gives comfortable margin.

Pending orders allowed

Standard at every major broker — breakouts use them.

MT4 or MT5

Matching the Razor Gold build you received.

Regulated

A regulated, established broker protects your funds.

Account type names to look for

"Raw", "Raw Spread", "ECN", "Razor" or "Zero". Avoid "Standard" accounts where the cost is hidden in a wider spread.

10 / BROKER · 2 OF 2

Recommended brokers.

These brokers offer the conditions Razor Gold needs. The choice is always yours — any broker that meets the requirements on the previous page can work.

★ Used on the live track record

Tickmill

The Razor Gold Myfxbook account runs on Tickmill (MT4, leverage 1:500). Choose the **Raw** account: raw spreads plus commission, fast execution, multiple regulators.

Account: Raw

Platform: MT4 / MT5

Gold symbol: XAUUSD

Popular choice

IC Markets

One of the most widely used brokers for Expert Advisors. Choose the **Raw Spread** account for the lowest trading costs.

Account: Raw Spread

Platform: MT4 / MT5

Gold symbol: XAUUSD

Alternative

Pepperstone — Razor account

Another low-spread broker that meets the requirements.

Opening your account — 4 steps

1

Register

Verify ID and address

2

Open a Raw / ECN account

MT4 or MT5, leverage 1:100+

3

Deposit

Only money you can afford to lose

4

Note your login

Send the account number for your license

i

Check the gold spread before funding

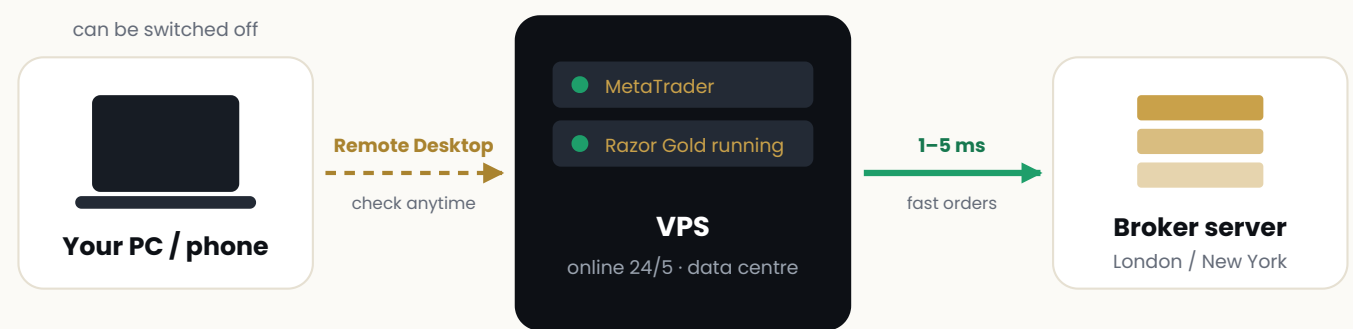

Open a demo with the same account type, add XAUUSD to Market Watch and watch the spread during the London and New York sessions. If it often sits above 20 pips (\$0.20), choose another account or broker.

Broker suggestions are based on our experience and are not financial advice. Account names and conditions change and depend on your country — always check the broker's current offer and regulation.

11 / VPS · 1 OF 3

What is a VPS?

A **VPS (Virtual Private Server)** is a Windows computer in a data centre that never switches off. You install MetaTrader on it once, and Razor Gold keeps trading 24 hours a day, 5 days a week — even when your laptop is closed.

Stops stay managed

Break-even, virtual trailing and pending orders only work while MetaTrader runs.

Faster execution

Close to your broker's server — less slippage on gold.

Access from anywhere

Check it from Windows, Mac or your phone with a remote desktop app.

Three ways to get a VPS

OPTION	BEST FOR	COST	YOU SEE THE CHART?
A · Windows Forex VPS e.g. ForexVPS.net, NYC Servers, Contabo	Full control; see the XAUBOT dashboard and news panel	~\$15–40 / month	Yes
B · MQL5 built-in VPS Rented from inside MetaTrader	Simplest setup — no remote desktop needed	\$15 / month (\$12.80 on yearly plan)	No — logs only
C · Free broker VPS Offered by some brokers	Clients who meet the broker's deposit or volume conditions	Free if eligible	Yes

Recommended for option A: Windows Server, 2 vCPU, 2–4 GB RAM, SSD, in the same city as your broker's server. Prices checked October 2026 and may change.

11 / VPS · 2 OF 3 — OPTION A

Buy & run a Windows VPS.

1 Choose a plan and order

Pick a **Windows** plan (2 vCPU, 2–4 GB RAM) and the location **closest to your broker's server** (usually London or New York — ask your broker if unsure), then pay.

2 Receive your login details

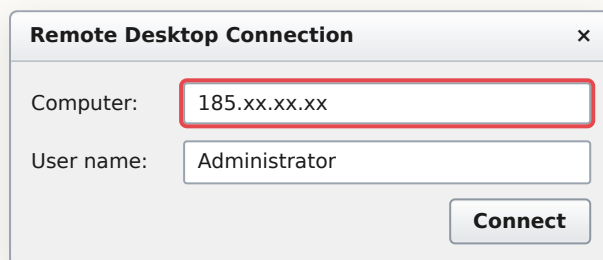

Within minutes you get an email with three things:

IP address · 185.xx.xx.xx

Username · Administrator

Password ·

3 Connect with Remote Desktop

Windows: press Start, type **Remote Desktop Connection** (or `mstsc`), enter the IP, click Connect, type the password.

Mac / iPhone / Android: install Microsoft's **Windows App** (formerly "Remote Desktop"), add a PC with the IP and username.

4 Install MetaTrader and Razor Gold on the VPS

Inside the VPS, download MetaTrader from **your broker's website**, install it and log in. Then repeat **chapter 04** (steps 1–9) and paste your license key. Copy files from your PC to the VPS with normal copy & paste through the remote window.

5 Make MetaTrader start automatically

Press **Win + R**, type `shell:startup`, press Enter, and copy the MetaTrader shortcut into that folder. If the VPS restarts, MetaTrader opens again by itself with your chart and robot.

Leave correctly

Close the remote window with the **X** at the top. MetaTrader keeps running on the VPS.

Never "Shut down" or "Sign out"

Inside the VPS this stops MetaTrader. Also never run Razor Gold on your PC *and* the VPS at the same time.

11 / VPS · 3 OF 3 — OPTION B

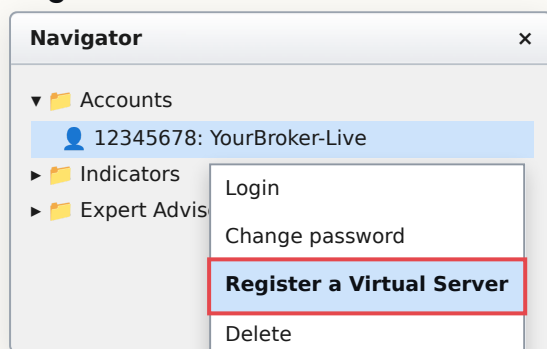

The MQL5 built-in VPS.

MetaQuotes rents a virtual server directly from your terminal. You set everything up on your own computer, then **migrate** it to the server.

1 Set up Razor Gold on your PC first

Finish chapters 04–06 locally: gold M15 chart, license key, settings, AutoTrading on, <https://xaubot.com> in the WebRequest list. Log in to your MQL5 account under **Tools · Options · Community**.

2 Register a Virtual Server

In the **Navigator**, right-click your **account number** › **Register a Virtual Server**. The terminal picks the server with the lowest ping to your broker. Choose a plan (1, 3, 6 or 12 months) and pay with your MQL5 account.

3 Migrate “Experts and indicators”

In the wizard, choose to migrate **Experts and indicators**. Your open charts, Razor Gold, its inputs and terminal settings (including the allowed WebRequest URL) are copied to the virtual server. Repeat every time you change settings.

4 Check the server log — then stop the local copy

Navigator › right-click your virtual server › **Journal**: confirm Razor Gold loaded without errors. Then **remove the robot from your local chart** so it doesn't trade twice.

No visible dashboard

The MQL5 VPS has no screen, so the news and AI panels aren't visible. You monitor trades through your account history and the server journal.

Changed a setting?

Change it locally, then migrate again. Settings changed only on your PC do not reach the server.

12 / TROUBLESHOOTING & FAQ

When something looks wrong.

Open the Terminal (Ctrl+T) › **Experts** and **Journal** tabs first — the reason is almost always written there.

YOU SEE	MOST LIKELY CAUSE	FIX
License error / dashboard not “Live”	URL missing or mistyped; key pasted with spaces; account number not registered.	Add https://xaubot.com (ch. 04 step 6). Re-paste the key. Send your exact account number in private chat.
Sad face ☹ on the chart	AutoTrading off, or “Allow live trading” unticked.	Click AutoTrading (green). F7 › Common › Allow live trading.
Razor Gold not in the Navigator	File in the wrong folder or wrong terminal (or .ex4 on MT5).	File › Open Data Folder › MQL4 › Experts. Refresh the Navigator.
Running, but no trades	Normal waiting; spread above 20 pips; news window; cooldown; Loss Lock (12 h after 2 losses); daily limit reached; market closed.	Be patient. Check SP on the dashboard and the Experts log.
Pending orders appear and disappear	Normal: orders are removed when price moves away or the spread spikes.	Nothing to fix.
Lot looks too small / too large	Risk Based lots depend on balance, Risk Per Trade % and the 300-pip stop.	See the worked example on page 11. Adjust Risk Per Trade %.
Results much worse than the backtest	Spread, commission and slippage at your broker; backtest run with a tiny spread.	Check your gold spread; switch to a Raw / ECN account; re-test with a realistic spread.
Trades doubled / strange behaviour	Robot on two charts, or running on PC and VPS at once.	One gold chart on one terminal only.

Quick answers

Is Razor Gold a grid or martingale?

No. Every trade has its own stop loss and the lot is based on your risk %.

Can I trade manually on the same account?

Yes — the magic number keeps Razor Gold’s trades separate.

Does it work on prop firm accounts?

Check the firm’s rules on EAs and scalping, and set Max Daily Loss below their daily limit.

Which timeframe should I use?

M15 by default. M5 for more trades on a very low-spread account, M30 for fewer.

I changed broker / account

Send the new account number in private chat to update your license.

Can I trade other symbols?

Razor Gold is designed and tested for gold (XAUUSD) only.

12 / BEFORE YOU LEAVE IT RUNNING

Final checklist.

Installation

- ✓ `Razor Gold_MT4.ex4` in MQL4 › Experts
- ✓ <https://xaubot.com> in the WebRequest list
- ✓ Allow automated trading ticked
- ✓ One XAUUSD chart (**M15** default), Allow live trading ticked
- ✓ License key pasted — dashboard shows **Live**

Running safely

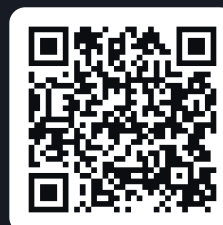

- ✓ Low-spread Raw / ECN gold account
- ✓ Risk Per Trade % you can live with
- ✓ Daily Loss Limit and Loss Lock on
- ✓ MetaTrader on a VPS, starting automatically
- ✓ Only one copy of the robot running

SUPPORT

- Screenshot of the Experts tab

Risk disclaimer

Trading gold, Forex, CFDs and other leveraged instruments involves substantial risk and may result in the partial or complete loss of your capital. Only trade with money you can afford to lose.

Razor Gold is software that executes trades according to predefined rules, with a stop loss on every trade. Losing streaks, slippage and price gaps — especially around news — can still cause losses larger than expected. No Expert Advisor or AI system can guarantee profits or avoid losses.

Backtest results are simulated: they are produced with the benefit of hindsight, do not include all real-market effects such as slippage, liquidity and variable spreads and commissions, and do not represent actual trading. Live track-record results reflect

one account at one broker over a specific period; past performance is not indicative of future results.

Broker and VPS suggestions are based on experience and are not endorsements or financial advice. Conditions and prices can change. Nothing in this manual is investment advice. You are solely responsible for your trading decisions, settings and results, and for complying with the laws of your country.

XAUBOT and ADAK Fintech Ltd accept no liability for losses arising from the use of this software or this manual, including losses caused by connectivity problems, broker execution, software errors or user configuration.
