

G T M

GTM PANEL PRO

User guide - every button, every box, every number

Version 2.53 - MetaTrader 5

Four trade groups, four limit slots, targets you drag on the chart, an entry checklist, a live guide with an optional AI assistant, a robot that reacts to your trades, and Telegram on your phone.

A manual tool: nothing trades unless you click.

Contents

Each section is one page: a picture or two where it helps, and a table that explains every control.

*	What's new in 2.53	3	11	Live AI guide and the AI assistant	14
1	What this panel is for	4	*	Setting up the AI key	15

9	Limit orders L1 L2 L3 L4	12	A	Glossary	23
10	Lines on the chart and MY TGT	13	B	Quick reference	24

What's new in 2.53

The biggest update since the panel first went on sale. Everything you already know works the same way - this is what was added and what was made safer.

NEW

- **AI assistant (optional).** Ask about your open trades, the market around them and upcoming high-impact news from the MT5 economic calendar. Uses your own API key - Google Gemini (free key), any OpenAI-compatible service (OpenAI, Groq, OpenRouter, DeepSeek, Mistral ...) or Anthropic Claude.
- **Your YES first.** The AI can suggest panel actions, but anything that opens, closes or changes a trade waits for you to press APPLY (or reply YES on Telegram).
- **Telegram voice notes.** Speak a question or an order; the AI writes it down and answers. Money orders still wait for YES.
- **HELP box, hover TIPS and 14 languages** for the guide, the HELP box and the tips. English and Singlish are built in, the rest are translated once by your AI key and saved.
- **Entry checklist (TN).** Your own rules, ticked one by one; the bar turns green when enough are OK.
- **Price alerts** above / below a price, on a line you drew, or on a trend break - with a line on the chart.
- **MY TGT** - free target boxes to plan a trade on the chart without opening it.
- **The robot.** An animated helper in its own box with 100 moments; it reacts to what your trades are doing.
- **Drag anything by its title bar** or by any empty spot - no MOVE button to aim at. Every box folds.

SAFETY AND FIXES

- Free margin and the symbol volume limit are checked before a trade is sent. If only part of the quantity fits, fewer orders go out and the panel says why.
- Lot sizes follow the symbol real lot step (0.001, 0.25 ...) everywhere, including the display.
- A locked panel no longer lets a dragged chart line move a live order, and the panel starts locked after a terminal restart.
- A double click on BUY, SELL, CLOSE or BE no longer runs twice.
- Stops on netting accounts are set for the real position direction.
- Pending expiry keeps working after a restart. Dragging a partly filled limit set moves the remaining orders instead of sending the full set again. A refused OCO cancel is retried.
- Telegram: a wrong token or chat id is reported in the Experts log, a slow line no longer freezes the panel, only one chart answers each bot, and remote lot commands respect your lot limits.
- Chart settings changed by the panel are restored when it is removed; lighter redraws on busy symbols.

1 What this panel is for

MetaTrader gives you one order window and a list of trades. That is fine for one trade. It falls apart the moment you run several ideas at once. GTM PANEL PRO is the layer on top. It is a manual tool: nothing trades unless you click.

CONTROL	WHAT IT DOES
Four desks, one chart	A, B, C and D are four separate trading desks on the same symbol. Each has its own lot size, stop, target, breakeven, trailing stop and magic number. Press CLOSE on B and only B closes - A, C and D carry on untouched.
You always know what you are about to touch	One line across the middle of the panel says which desk the buttons point at, how many trades it holds and what they are worth. Nothing is ever closed by accident.
Stops and targets in one place	SL, TP, breakeven, breakeven gap and trailing stop are five boxes. Type a number or tap an arrow. They go on with every trade that desk opens.
Money, not points	SL 5.00 means five dollars of risk on that trade. Switch to percent if you prefer. Lots are checked against the broker minimum, lot step and your free margin before anything is sent.
Four limit desks as well	L1 to L4 are four pending-order slots, each with its own price, lot, stop, target and expiry. Build a ladder into a level and let the first fill cancel the rest.
Today and this month, per desk	A line for every desk: closed trades, win rate and cash banked - today or this calendar month.
Draw the trade before you take it	Stop and target lines appear on the chart before you press anything, with a red block to the stop and a green block to the target. Pull them with the mouse and the numbers follow.
Somebody watching with you	The live guide reads your trades and speaks up when it matters: a trade with no stop, a deep drawdown, falling margin, news coming. With your own AI key you can ask it questions too.
Your phone is the panel	Alerts out to Telegram, commands back in. Close a trade, move to breakeven, ask for a chart picture or a report - even by voice.
It remembers	Where every box sits, which ones are folded, your theme, your typed values and your numbers survive a restart and a timeframe change. Today figures are rebuilt from the deal history.

2 The first ten minutes

Attach it, make it yours and take the first trade - in this order.

CONTROL	WHAT IT DOES
1 Find it	After you buy or rent on the MQL5 Market the panel downloads into MetaTrader by itself. Open the Navigator with Ctrl+N and look under Expert Advisors > Market.
2 Put it on a chart	Drag GTM PANEL PRO onto the chart of the symbol you trade (or double-click it).
3 Allow Algo Trading	In the window that opens, Common tab: tick Allow Algo Trading. Also switch on the Algo Trading button in the MetaTrader toolbar. Without it no button can send an order.
4 Set your four desks	Inputs tab: lot, quantity, SL, TP, breakeven, gap and trailing for A, B, C and D. These are only starting values - you can change every one from the panel later and it remembers.
5 Press OK	The panel builds itself and rebuilds today numbers from your deal history.
6 Unlock it	The panel starts locked so a stray click cannot trade. Type the password and click the lock icon. It ships as 123 - change InpPassword to your own.
7 Read the scope line	Before you press anything, read the line across the middle: which desk, which sides are armed, how many trades, what they are worth.
8 Arm a side	In the group selector the green half of a letter is its BUY side and the red half its SELL side. A side that is dark is off and can never be opened or closed.
9 Set the stop and target	Type an SL and a TP in the settings block. Turn on BUY TGT and the two lines appear on the chart - exactly where the next trade would sit.
10 Take the trade	Set QTY and LOTS, then press BUY or SELL. The panel checks the lot and the margin, sends the orders and the stop and target go on with them.
11 Let it look after itself	Set a breakeven trigger and switch TSL on so the stop trails. Now you can leave the screen.
12 Optional extras	Telegram (section 15) and the AI assistant (section 11). The panel works fully without either of them.

Tip: rest the mouse on any button. With TIPS on, a short note appears; click the note and the HELP box opens on the right page.

3 The main panel at a glance

Every button on the panel belongs to one of five blocks: account, management (BUY / SELL), SL / TP settings with the group selector, close / break even, and today stats. The next pages take them one at a time.

GTM

One panel for the whole account

Pick a group, arm BUY and / or SELL, and every button acts only on that group

The screenshot shows the GTM Panel interface with the following sections:

- Account at a glance:** BALANCE : 2954.60, EQUITY : 2956.03, FLOAT : +1.43\$.
- BUY / SELL per group:** BUY : 1, BUY P/L : +1.43\$, SELL : 0, SELL P/L : +0.00\$.
- Group settings A B C D L:** SL, TP, BE, GAP, TSL settings for groups A, B, C, D, and L.
- Close and protect:** CLOSE ALL, CLOSE PROFIT, CLOSE LOSS, CLOSE BUY, CLOSE SELL, BREAK EVEN A, LIMIT ON, MY TGT 1.
- Today's stats:** TRADES : 1, WIN RATE : W0 / L1 0% 00000, DAILY P/L : -4.11\$.

1 Account at a glance

Balance, equity, floating P/L, buys and sells of the active group.

2 BUY / SELL per group

QTY and LOTS for each side. One click opens the whole set.

3 Group settings A B C D L

SL, TP, break-even trigger, gap and trailing in \$ or %, per group.

4 Close and protect

Close all, profit only, loss only, buys or sells; break-even with one click.

5 Today's stats

Trades, win rate and daily P/L per group and per limit slot.

LIVE A B C D		
LIVE	WIN % TODAY	WIN \$ TODAY
A - 1 »»»»»	A : 0% (1)	A : -5.54\$
B - 0	B : -	B : -
C - 0	C : -	C : -
D - 0	D : -	D : -

LIVE A B C D

Open trades, win % and win \$ today for every group in its own box.

4 Title bar, lock and account

The strip along the top never hides. Under it sit the live money numbers - they count only trades this panel owns.

CONTROL	WHAT IT DOES
Live candle meter + LIVE	Tiny candles and a green LIVE word that move every second, so you can see the panel is running.
S / M / L / XL	Panel zoom. Each click steps 85 % - 100 % - 115 % - 130 % - 150 %. Or drag the corner grip.
Moon / sun	Night mode - a dimmer panel for dark rooms.
Move cross	Not a button any more - just a sign. Hold the title bar or any empty spot of the panel and drag.
(-)	Fold the panel to its title bar. Click again to open.
T	Theme: NAVY, GOLD, EMERALD, PURPLE, CYBER, CLASSIC. Works while locked.
Lock	Type the password and click the lock to unlock; click again to lock. While locked only look-and-feel buttons respond and chart lines cannot move live orders.
HELP / TIPS	Open the HELP box; switch the hover notes on or off.

CONTROL	WHAT IT DOES
BALANCE	Closed money in the account. Moves only when a trade closes.
EQUITY	Balance plus everything floating right now.
FLOAT	The one number a trader watches - profit or loss of every open trade together. Green when up, red when down.
BUY : n / SELL : n	How many buy and sell trades are open across all groups.
BUY P/L / SELL P/L	Floating profit of each side, so you see at once which side is hurting.
Scope strip	GROUP A - BUY lamp - SELL lamp - n open - their P/L. A filled lamp means that side is ON. This line tells you exactly what the buttons below will touch.

5 Opening a trade and the entry checklist

Two buttons and four boxes are the whole manual entry system. TN opens a checklist so you only enter when your own rules say yes.

CONTROL	WHAT IT DOES
BUY A / SELL A	Open trades for the group named on the button. Dark = that side is off, so the button does nothing.
QTY	How many separate trades one press opens.
LOTS	Lot size of EACH trade. Never below the broker minimum and always on the symbol lot step.
Worked example	QTY 4 and LOTS 0.50 = one press opens four trades of 0.50, two lots in total.
Two sides, two settings	The sell column has its own QTY and LOTS. Four small buys against one big sell is fine.
Margin check	Before sending, the panel checks free margin and the volume limit. If only some trades fit, it sends those and says why.
HIDE / SHOW	Fold the block away to make the panel shorter.

CHECKLIST	WHAT IT DOES
TN	Opens / closes the ENTRY CHECKLIST box.
Your rules	Type a rule into each line - "line cross OK", "candle close OK", "SL / TP set, risk OK". Up to 12 lines.
The square	Click it in front of a line: OK, not OK, empty.
- n / 5 +	How many must be OK. When enough are, the box turns green and says ENTRY OK.
RESET	Clears the marks for the next trade.
AUTO ON	Clears the marks by itself when a trade opens.
+ ADD / -	Add a line / remove a line. The corner grip resizes the box. Your list is saved.

6 SL / TP settings and the group selector

Where every group keeps its stop, target and breakeven, and where you choose which group the panel points at.

CONTROL	WHAT IT DOES
SL	Stop loss, in \$ or %. 0 = off. It goes on with the order, so the trade is never naked.
TP	Take profit. Same units.
BE	Breakeven trigger - once a trade is this much in profit its stop moves to entry by itself.
GAP	How far past entry the breakeven stop lands. 0.00 = exactly entry; a little covers spread and commission.
TSL	Trailing distance. Runs only while TSL is ON for that group. It never moves backwards and is silent on purpose.
Arrows	Step a value up or down by the step size.
\$ / %	Read SL, TP, BE, GAP and TSL as account money or percent of price.
x0.01 ... x10	How much one arrow click changes a value.

CONTROL	WHAT IT DOES
A B C D	Tap a letter to make it the active group. Its colour is the colour its trades wear on the chart.
Green half	The BUY side of that group, ON / OFF. It shows open / close-count.
Red half	The SELL side, ON / OFF.
ALL / x1 x2 x3	How many trades CLOSE and BE take. 3/2 closes two of three and leaves one running.
L row	The LIMIT scope - close and BE buttons then work on L1-L4. BOX opens the limit box.
BUY TGT / SELL TGT	Show the next trade SL / TP lines on the chart. Drag a line and the value follows.
AG TAG	Group chips on the right edge of the chart.
MY TGT	Drop a free target box on the chart (section 10).

7 Switches, Telegram row, close and break even

The buttons under the settings. Close and BE only ever touch the scope shown in the strip - a group that is not active, or a side that is off, is never touched.

CONTROL	WHAT IT DOES
TSL A ON / OFF	Trailing stop for the active group.
SOUND	Fill, close and breakeven sounds.
ABCD / L1-L4	Show or hide the LIVE A B C D and LIVE L1-L4 boxes.
AI ON / OFF	Show or hide the LIVE AI GUIDE box.
TG ALERT	Push every open, close, breakeven and limit fill to your Telegram chat (and group, if set).
REMOTE	Accept commands from Telegram. While OFF every incoming message is thrown away.
SNAP SHOT	Send a picture of the chart, with symbol, open count and float.
REPORT	Send today report: account, win rate, every group and the limit desk.

CONTROL	WHAT IT DOES
CLOSE ALL	Close the trades in scope (with 3/2 set, two of three).
CLOSE PROFIT	Close only the trades that are green.
CLOSE LOSS	Close only the trades that are red.
CLOSE BUY / SELL	Close one side of the scope, if that side is ON.
BREAK EVEN A	Stop to entry (+GAP) now on trades far enough in profit. Trades too close are left alone and the guide says so. The broker stop level is respected.
LIMIT ON	Open or close the LIMIT ORDERS box.
Double click safe	A second click inside 0.4 s is ignored, so nothing runs twice.

8 Stats and the live boxes

Rebuilt from the deal history every time the panel starts, so a restart or a timeframe change never loses the numbers. Trades closed with the terminal own X still count for their group.

TODAY STATS	WHAT IT SHOWS	LIVE BOXES	WHAT IT SHOWS
T / M	Today or this calendar month. The LIVE boxes follow this switch.	LIVE A B C D	Three columns per group: open trades now, win % (closed count), win \$. Green in profit, red down, grey idle.
TRADES	Trades closed in the period.	LIVE L1-L4	Open and pending orders of each slot and their floating P/L.
WIN RATE	Wins / losses and the percentage, with a five-block meter.	Reading a row	C - 3 >>> C : 100% (2) C : 1.75\$ = three C trades running, two closed and both won, C has made 1.75 so far.
DAILY P/L	Money banked in the period plus everything floating now - with commission and swap.	Move / fold	Each box moves by its title bar and folds to one line.
A B C D	What each manual group earned or lost.		
L1 L2 L3 L4	The same for the four limit slots.		

9 Limit orders L1 L2 L3 L4

Four independent pending-order slots, one tab each. Every box belongs to the open tab.

GTM
Limit desk: four pending-order slots
Buy / sell limit or stop, several orders per slot, OCO, expiry - checked before they are sent

CLOSE ALL
CL BUY
CL SELL
CL PROFIT
CL LOSS

1 Price checked first
A buy limit above the market is refused with a clear message before anything is sent.

2 Own lots, SL, TP, quantity
Each slot L1-L4 keeps its own values and magic number.

3 OCO and expiry
One fills, the others are cancelled. Expiry 1M to 1D, kept after a restart.

4 Close the slot
Close all, buys, sells, winners or losers of just this slot; BE in one click.

5 Drag it on the chart
Move the pending line and the live order follows (only while unlocked).

Price checked first. A BUY LIMIT must sit below price and a BUY STOP above it. Get it the wrong way round and the reason appears in red - PUT is refused rather than failing silently.

CONTROL

OCO ON / OFF

WHAT IT DOES

One cancels others - the moment any slot fills, every other pending is cancelled. A refused cancel is retried.

DEL ALL

Delete every pending order of all four slots.

L1 - L4 tabs

Pick the slot. Its colour is the colour of its lines and tags.

FILLED / PENDING

Trades this slot has live / orders still waiting.

EXPIRY

OFF, 1M, 30M, 1H, 1D - an unfilled order deletes itself. Kept after a restart.

BE / PUT

Breakeven on this slot live trades / send (or move) the pending order.

Type

BUY LIM, SELL LIM, BUY STP, SELL STP.

PRICE LOTS SL TP

Type, or drag the line on the chart and the box follows.

TRADES - n +

How many orders one PUT sends. Each tab keeps its own number.

Info strip

Distance in points and the risk in cash if the stop is hit.

LTGT

Show this slot SL / TP lines on the chart.

CLOSE row

Close all, buys, sells, winners or losers of this slot only.

10 Lines on the chart and MY TGT

Set the entry, the stop and the target by pulling them on the chart instead of typing numbers.

DRAGGING	WHAT IT DOES	ON THE CHART	WHAT IT DOES
Price line	The entry. Pull it and the whole order goes with it - stop, target and both shaded blocks.	MY TGT	A free target box for planning. Drag its entry, SL and TP anywhere. It is not tied to any trade and never sends anything.
SL line + red block	Drag it alone and only the stop moves.	Several at once	Click MY TGT again for another box; the button shows how many are out.
TP line + green block	The target, the same way.	Remembered	Boxes are kept by real chart time, so a timeframe change or a restart puts them back in place.
Edge tag	A chip on the right edge with the price, following the line while you drag.	Group chips (AG TAG)	On the right edge, e.g. AG5 100.00 = group A has five trades around 100.00. Gold A, cyan B, violet C, mint D.
A live pending	Drag its line and the real order at the broker is modified - only while the panel is unlocked.	Price alert lines	Alerts you set (section 16) are drawn as lines too.
BUY / SELL TGT	The main panel target lines drag the same way and write into SL / TP settings.	Behind the panel	Lines are drawn before the panel, so they never wash across a box.
One at a time	Only one of BUY TGT, SELL TGT or LTGT is up at once, so the chart never gets crowded.		

11 Live AI guide and the AI assistant

Two things live in this box. The guide watches your trades all the time and needs nothing. The assistant answers your questions and needs your own AI key.

GTM

Live AI guide and the robot

A guide that watches your trades and an optional AI assistant that answers in 14 languages

1 The robot

100 moments: happy on a win, alarmed near the stop, asleep when the market is quiet.

3 AI assistant (optional)

Ask about your trades, the market and news. Uses your own Gemini, OpenAI-compatible or OpenRouter key.

4 Your YES first

Any action that opens, closes or changes a trade waits for your confirmation.

2 Live guide

Warns about missing stops, drawdown, margin and news, and reminds you of armed sides.

5 News from MT5

High-impact events from the MT5 economic calendar, with a warning before they hit.

The AI never trades by itself. When it suggests an action, APPLY and cancel buttons appear. Nothing happens until you press APPLY - or reply YES on Telegram. A suggestion expires after 3 minutes.

CONTROL	WHAT IT DOES
AI ON / OFF	Master switch for the assistant. OFF = not one call is made to your key.
LANG	The AI reply language: English, Sinhala, Singlish, Tamil.
NEWS	Read the MT5 economic calendar and warn before high-impact news.
REVIEW	Ask for one written review of your open trades now.
DOCK / FREE / ROAM	Where the robot lives (section 12).
Status line	Active group, open trades, and market speed: QUIET, NORMAL, HIGH, WILD.
The feed	Lines type out one letter at a time. Colour shows how urgent: red act, amber watch, blue info, green good news.
What the guide watches	No stop, drawdown, margin, both sides open, volatility, limits close to filling, news coming.
Ask box	Type and press Enter (or ASK). A line starting with / is a command - the same as Telegram. Anything else is a question.
Scroll	Arrows or the mouse wheel over the box.

Setting up the AI key

Optional. Every buyer uses their own key, so free limits are never shared. Google Gemini gives a free key.

STEP	WHAT TO DO
1 Get a key	Gemini: aistudio.google.com > Get API key. Or a key from OpenAI, Groq, OpenRouter, DeepSeek, Mistral (OpenAI compatible) or Anthropic.
2 Allow the address	MetaTrader: Tools > Options > Expert Advisors > Allow WebRequest for listed URL. Add only the one you use (list on the right).
3 Paste it	Inputs: InpAiProvider, InpAiKey, and optionally InpAiModel. For other OpenAI-compatible services set InpAiBaseUrl.
4 Switch it on	AI ON in the guide box. Type a question and press Enter.
Limits	InpAiPerMin and InpAiPerDay keep you under your free quota. InpAiReserve keeps part of the day for your own questions.
Auto review	InpAiReviewMin = a short review every N minutes while trades are open (0 = off).
Day report	InpAiDayReport sends an end-of-day AI report to Telegram at InpAiDayHour.
/usage	How many AI calls were used today.

PROVIDER	WEBREQUEST ADDRESS
Gemini (default)	https://generativelanguage.googleapis.com
Groq	https://api.groq.com
OpenAI	https://api.openai.com
OpenRouter	https://openrouter.ai
Anthropic	https://api.anthropic.com
Telegram + voice	https://api.telegram.org

Backup model. InpAiModel2 is tried when the main model is busy. **Web search** (Gemini only, InpAiWebSearch) adds live headlines but uses more quota.

12 The robot

An animated helper built into the program - nothing to install. It has 100 moments, blinks, and its eyes follow your mouse in eight directions. Its mood comes from what your trades are actually doing.

Happy
trades in profit

Celebrate
a winner just closed

Talking
the guide speaks

Thinking
AI is answering

Watching
trade or order running

Worried
in a loss

Alarm
no stop, low margin, spread

Sleeping
quiet market

Idle
nothing open

Looking around
eyes follow the mouse

BOT BUTTON

DOCK

MODE

In its own AI BOT box beside the guide. The box moves by its title bar, folds with (-) and resizes from the corner grip.

FREE

Loose on the chart with no box. Grab him anywhere and walk him about. Mouse wheel over him = bigger / smaller.

ROAM

He walks about the chart by himself. Turn off with `InpBotRoam = false` if it costs you frames.

SETTING

Colour square

WHAT IT DOES

Steps the colour behind the bot (`InpBotBg` sets the start).

InpFaceMode

Start in 0 = box, 1 = free, 2 = roaming.

InpBotAnim

false = a still robot, for slow computers.

13 HELP, tips, languages and themes

Every button is explained inside the panel, in your language.

1

HELP box

10 topics: start, trade, SL/TP, close, limit, live, lines, AI, Telegram and panel. Scrolls page by page.

2

Hover tips

Point at any button to see what it does. TIPS switches them on or off.

3

Entry checklist

Your own rules. Tick each one; the bar turns green when all are OK.

4

Saved for you

Add, delete or edit lines; the list is kept between sessions.

5

Languages

English by default. The LANG button switches the guide, HELP and tips.

HELP - TELEGRAM

GTM PANEL PRO 2.53 - user guide

17

14 Moving, folding and remembering

Every box outside the panel has its own place. There is no MOVE button to aim at any more.

CONTROL	WHAT IT DOES
Move any box	Hold its title bar, its name, or any empty spot - and drag. Only that box follows the mouse.
Move everything	Dragging the main panel carries the whole layout with it.
Fold	The (-) on a box rolls it up to its title bar. Boxes under it slide up to fill the gap.
Resize	The panel, the bot box and the checklist have a corner grip.
Remembered	Positions, folds, theme, size, typed values, checklist lines and MY TGT boxes survive a restart, a timeframe change and a recompile.
On remove	Chart settings the panel changed are put back when you remove it from the chart.

15 Telegram - your phone is the panel

Two switches: TG ALERT sends things out, REMOTE lets things in. They are separate on purpose - you can have every alert on your phone with the account untouchable from it.

GTM

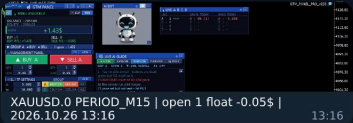

Telegram: alerts, snapshots and reports on your phone
Open, close, break-even and limit fills, a chart picture on request, and optional remote commands

My GTM bot bot

GTM PANEL XAUUSD.0 PERIOD_M15

2026.10.26 13:16
13:16

1 Trade alerts
Open, close, break-even, limit fills, wins and losses - with lots, price and SL / TP.

2 Chart snapshot
SNAP SHOT sends the chart with the panel straight to your chat.

3 Status and reports
/status, REPORT and an optional AI day report at the hour you choose.

4 Remote commands (optional)
/buy, /sell, /closeall, /be ... Trading commands stay off until you allow them in the inputs, and only your chat id is obeyed.

5 Safe by design
Old messages never run when REMOTE is switched on; only one chart answers each bot.

STEP

WHAT TO DO

1 Make a bot

In Telegram open @BotFather, send /newbot and copy the token into InpTgToken.

2 Your chat id

@userinfobot tells you your number. Paste it into InpTgChatID.

3 A group (optional)

Add the bot to the group as admin and put the group id (it starts -100) into InpTgGroupID. Blank = off.

4 Allow the address

Tools > Options > Expert Advisors > Allow WebRequest > add <https://api.telegram.org>.

5 Switch on

TG ALERT for alerts. REMOTE for commands. Trading commands also need InpTgAllowTrade = true.

Only you

Only your chat id is obeyed. Old messages never run when REMOTE is switched on, and an edited message never runs again.

One chart answers

If the panel is on several charts with the same bot, only one chart reads the commands.

Voice notes

With InpAiVoice on (and an AI key) a voice note is written down and answered. Money orders wait for your YES.

16 Commands and price alerts

Send these to your bot - or type them in the guide ask box on the panel. REMOTE must be ON for Telegram, and trading commands also need `InpTgAllowTrade = true`.

PANEL	WHAT IT DOES
<code>/status</code>	Panel and account snapshot
<code>/report</code>	Full written report
<code>/ss</code>	Chart screenshot
<code>/guide</code>	AI guide lines only
<code>/limit</code>	Limit desk status
<code>/a /b /c /d</code>	Pick the group
<code>/on /off</code>	Arm / disarm both sides
<code>/buy [n] /sell [n]</code>	Open n trades
<code>/closeall</code>	Close the active group
<code>/closeprofit /closeloss</code>	Close winners / losers
<code>/closebuy /closesell</code>	Close one side
<code>/be</code>	Manual breakeven
<code>/tsl on off</code>	Trailing stop
<code>/lot 0.05</code>	Set lot, both sides (inside your lot limits)
<code>/sl 5 /tp 10 /begap 1</code>	Set a value
<code>/help</code>	The whole list

AI ASSISTANT	WHAT IT DOES
<code>any text / voice</code>	Ask the AI - your open trades are attached
<code>/ask ...</code>	Ask the AI
<code>YES / NO</code>	Confirm or cancel a suggestion
<code>/review</code>	AI review now
<code>/news /news on off</code>	Upcoming news; switch the news watch
<code>/ai on off</code>	Switch the assistant
<code>/lang en si sng ta</code>	AI reply language
<code>/usage</code>	AI calls used today
<code>/net</code>	How fast your line is
PRICE ALERTS (UP TO 10)	FIRES WHEN
<code>/alert above 2350</code>	Price goes above
<code>/alert below 2300</code>	Price goes below
<code>/alert 2350</code>	Above or below - picked from the current price
<code>/alert line NAME</code>	Price crosses a line you drew
<code>/alert trend</code>	A trend break
<code>/alert list del 2 clear</code>	Show, remove, clear

17 The EA inputs

Press F7 on the chart (or Charts > Expert List > Properties) and open the Inputs tab. Double-click a value, type, press OK. Saved panel values are kept.

CONTROL	WHAT IT DOES
InpMagicA ... D	Each group own magic number. If two clash the panel will not load and the Experts tab names them.
InpPassword	Unlock password. Ships as 123 - change it.
InpSlippage	Maximum slippage in points.
InpPanelX / Y	Where the panel first appears.
InpThemeStart	0 NAVY 1 GOLD 2 EMERALD 3 PURPLE 4 CYBER 5 CLASSIC.
InpUISize	Start zoom.
InpSideBoxStart / InpSoundStart	LIVE box and sounds at start.
InpA_Lots ... InpD_TSL	Starting lot, quantity, SL, TP, BE, gap and trailing for each group.
InpMagicL	Base number for L1-L4 (uses +0 +1 +2 +3 - keep four free numbers).
InpL_Lots / SL / TP / Expiry / OCO	Starting values for the limit slots.
InpMinLot / InpMaxLot	Lot limits for the panel and for remote /lot.
InpMinQty / InpMaxQty	Trades per click limits.

CONTROL	WHAT IT DOES
InpTgToken / ChatID / GroupID	Telegram (section 15).
InpTgAllowTrade	false = Telegram can only read. true = BUY, SELL and CLOSE are obeyed.
InpTgPollSec	How often REMOTE checks for messages. Raise it on a slow line.
InpTgSinhala	Bilingual replies.
InpFaceMode ... InpBotAnim	The robot (section 12).
InpHistTidy	Keep MT5 trade-history arrows behind the panel, no captions.
InpUiLang / InpTips	Language of guide, HELP and tips; hover tips on.
InpAiEnable ... InpAiTimeoutSec	The AI assistant (Setting up the AI key).
InpAiNews / InpAiNewsWarn	Use the MT5 calendar; warn N minutes before high-impact news.
InpAiVoice / InpAiVoiceAutoRun	Understand voice notes; run non-money voice commands at once. BUY / SELL / CLOSE always wait for YES.
InpAiMaxWords	Maximum words in an answer.

18 When something goes wrong

The things people actually run into.

CONTROL	WHAT IT DOES
A button does nothing	Look at the scope strip. If the side you want is a hollow lamp, switch it on. If the panel says LOCKED, unlock it first.
BUY or SELL will not open	That side is off, Algo Trading is off, or there is not enough free margin. The guide and the Experts tab say which.
Fewer trades than QTY	Free margin or the symbol volume limit only allowed part of them. The panel says how many it sent.
The panel will not load	Two magic numbers clash. The Experts tab names the two.
A dragged line jumps back	The panel is locked - a locked panel never moves a live order. Unlock it first.
A limit will not go out	The price is on the wrong side for that order type. The reason is in red on that row.
Telegram sends nothing	Add https://api.telegram.org to the WebRequest list, check the token and chat id, switch TG ALERT on. A wrong token or chat id is printed in the Experts tab.
Telegram commands ignored	REMOTE must be ON, the message must come from your chat id, and trading commands need <code>InpTgAllowTrade = true</code> . Messages sent before REMOTE was on are skipped on purpose.
The AI says nothing	AI must be ON, the key pasted, and the provider address in the WebRequest list. Check <code>/usage</code> - the daily cap may be used up.
The panel stutters	Send <code>/net</code> . Over about 900 ms is your internet line - turn REMOTE off or raise <code>InpTgPollSec</code> . Under 350 ms the line is fine; look at chart objects or other indicators.
A box is lost	Drag it back by its title bar. If it is out of reach, remove the panel and attach it again; your values come back.

A Glossary

The words this panel uses, in plain language.

WORD	MEANING
FLOAT	Profit or loss of every trade still open.
SL - stop loss	Where a losing trade closes by itself. Your seat belt.
TP - take profit	Where a winning trade closes by itself.
BE - break even	Stop moved to entry so the trade can no longer lose.
GAP	How far past entry the breakeven stop lands.
TSL - trailing stop	A stop that follows price as the trade goes your way.

WORD	MEANING
Scope	Which trades the buttons may touch: one group and its ON sides, or the limit slots.
Magic number	A hidden tag on every order - how the panel keeps groups apart and shares a chart with other EAs.
Pending order	An order that waits at a price. LIMIT waits for price to come back, STOP for price to run on.
OCO	One cancels others - the first slot to fill cancels the rest.
Drawdown	How far equity has fallen below balance.
Volatility	How fast price moves now compared with recently: QUIET, NORMAL, HIGH, WILD.

B Quick reference

Every control on one page. Keep it open while you learn the panel.

LOCK

Type the password, click the lock. Default 123.

BUY / SELL

QTY trades of LOTS size for the active group.

SL TP BE GAP TSL

Per group, in \$ or %. Arrows step by x0.01 ... x10.

TN

Entry checklist - green = ENTRY OK.

L1-L4 / PUT

Pick a slot, set it, send it. OCO, EXPIRY, DEL ALL.

TG ALERT / REMOTE

Alerts out - commands in.

BOT

DOCK - FREE - ROAM. Wheel resizes the free bot.

S M L XL / moon / T

Size - night mode - theme.

A B C D

Pick the group. Green / red = its BUY / SELL side.

BUY TGT / SELL TGT

Preview lines - drag them to set SL / TP.

CLOSE ALL / PROFIT / LOSS

Close everything, winners or losers in scope.

T / M

Today or this month.

SNAP SHOT / REPORT

Chart picture - written report.

/net

Is it your line or the panel?

Drag

Title bar or any empty spot moves a box. (-) folds it.

ALL / xN

How many trades CLOSE and BE take.

MY TGT

Free planning box on the chart.

BREAK EVEN

Stop to entry now on trades in profit.

AI ON

Your assistant. Suggestions wait for APPLY.

HELP / TIPS / LANG

10 topics, hover notes, 14 languages.

F7

EA inputs.
