Characteristics

- ✓ Automatically calculates lot size against a USD value for market orders and pending orders.
- ✓ Protects operations at BE, 25%, 50% y 75%.
- ✓ Close all BUY operations in 1 click.
- ✓ Close all SELL operations in 1 click.
- ✓ Close all PROFIT operations in 1 click.
- ✓ Close all LOSS operations in 1 click.
- ✓ Close ALL operations in 1 click.
- ✓ Calculate and draw average prices in BUY operations.
- ✓ Calculate and draw average prices in SELL operations.
- ✓ Calculate and draw average prices in BUY and SELL operations together.
- ✓ Modify SL and TP parameters of many operations in 1 click.

ARE YOU LOOKING FOR A WAY TO TRADE IN THE FINANCIAL MARKET MORE EFFICIENT AND PROFITABLE?

Let us present you with a solution that will change the way you approach trading. With our innovative MQL5 trading bot, we offer you a tool that goes beyond simple automation: we provide you an intelligent system that adapts and optimizes in real time, taking your operations to the next level.

Imagine being able to automatically calculate the size of your investment lots, all while having full control over your trades. But this is where our solution stands out: thanks to the ability to draw a red line symbolizing your Stop Loss on the chart, our bot dynamically recalculates your lot sizes based on this reference. This means you can fine-tune your risk management strategy with unparalleled precision, without the need for manual intervention.

With our bot, be part of it! you are not only automating your trading, you are improving your ability to adapt to market changes instantly and accurately. You no longer have to worry about manually adjusting your lots based on market fluctuations – our bot does it for you, allowing you to focus on making more informed strategic decisions.

In addition, our EA has many other functionalities such as its ability to calculate and mark the average prices of your tickets in BUYS, SELLS or both, allowing you to operate with unmatched precision and strategy.

Imagine the competitive advantage of being able to adjust your Take Profit and Stop Loss objectives for all of your open trades with a simple click, adapting them to the market panorama in real time.

Join our community of traders who are experiencing the power of intelligent automation. With our “Trade Assistant”, you are not just investing in a tool, you are investing in your future success. The trading revolution is here, and you can be part of it!

SECTION 1

“Market” Button:

When you click, a red line will appear that symbolizes the Stop Loss level. This line can be moved on the graph to where you want to place the SL parameter. It will use the current market price as the entry price and thanks to this functionality, the EA will automatically recalculate the appropriate lots so that the risk in USD is equivalent to the value entered in the box called “Stop Loss USD”.

“Pending” Button: when clicked, 3 lines will appear

- **Orange:** symbolizes the entry price, this can be moved on the chart to where you want to place the opening price of the operation.
- **Red:** symbolizes the Stop Loss level, it can be moved on the chart to where you want to place the SL parameter.
- **Green:** symbolizes the Take Profit price, it moves automatically with respect to the value in the “TP Ratio” placed.

SECTION 2

- **Stop Loss USD:** this box is modifiable, you can enter the value in USD that you want to risk for each operation.
- **Stop Loss Price:** this box is not modifiable, it indicates the price of the red Stop Loss line.
- **Lot:** this value is recalculated automatically, it depends on the value of the “Stop Loss Price” and the “Stop Loss USD”.
- **Ratio TP:** the ratio is the proportion of profit with respect to the Stop Loss level, a ratio of 1 means that what I am going to win is the same amount that I am risking. This value is modifiable by the user.

Stop Loss USD	50
Stop Loss Price	2164.5918
Lot	0.06
Ratio TP	1.0

SECTION 3

These 4 orange buttons allow you to move the Stop Loss to protect the operation:

Protect Trades: XAUUSD

BE 25% 50% 75%

Ajust TP and SL

- **“BE” Button:** protects the operation at the entry price.
- **“25%” Button:** protects the operation at 25% of the way to Take Profit.
- **“50%” Button:** protects the operation at 50% of the way to Take Profit.
- **“75%” Button:** protects the operation at 75% of the way to Take Profit.
- **“Ajust TP and SL” Button:** modifies the Take Profit price and Stop Loss with respect to the current parameters of the “Stop Loss USD” and “TP Ratio” boxes.

SECTION 4

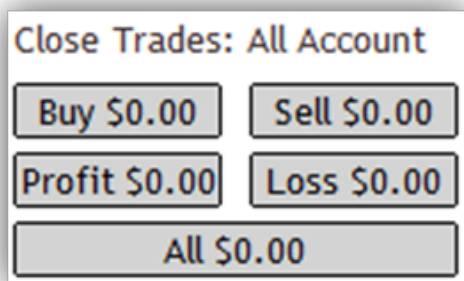

All buttons are dynamic, updating the value in USD in real time, as well as red for negative amounts and green for positive amounts.

- **“Buy” Button:** clicking on it will close all “Buy” type operations only for the asset on the screen.
- **“Sell” Button:** clicking will close all “Sell” type operations only for the asset on the screen.
- **“Profit” Button:** clicking will close all the operations that are in profits only from the asset on the screen.
- **“Loss” Button:** clicking on it will close all operations that are in losses only for the asset on the screen.
- **“All” Button:** clicking will close all operations only for the asset on the screen.

SECTION 5

All buttons are dynamic, updating the value in USD in real time, as well as red for negative amounts and green for positive amounts

- **“Buy” Button:** clicking on it will close all “Buy” type operations of the account.
- **“Sell” Button:** clicking on it will close all “Sell” type operations of the account.
- **“Profit” Button:** clicking will close all the operations that are in profits of the account.
- **“Loss” Button:** clicking on it will close all operations that are in losses of the account.
- **“All” Button:** clicking on it will close all account operations of the account.

SECTION 6

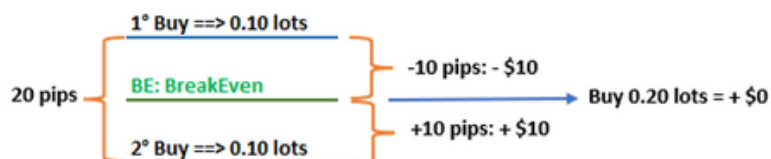

Draw Average Entry Price:

☐ Buy ☐ Sell ☐ Total

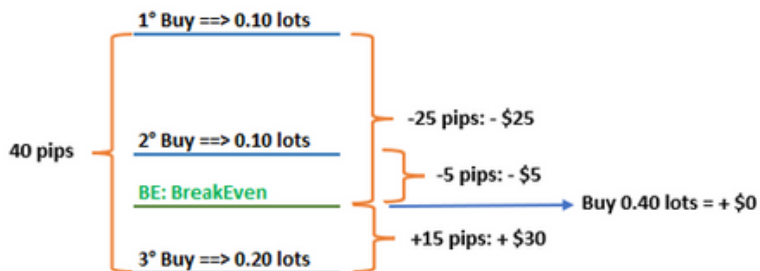

Intelligently calculates the new breakeven point in real time, taking into account all your open trades:

- **“Buy” CheckBox:** draws a green line at the average price level considering only “Buy” type operations of the asset on the screen.
- **“Sell” CheckBox:** draws a red line at the average price level considering only “Sell” type operations of the asset on the screen.
- **“Total” CheckBox:** draws a blue line at the average price level considering all type operations (Buy & Sell) of the asset on the screen.

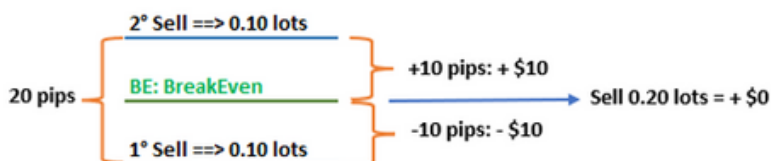

Example 1 (Buy) → 2 Trades

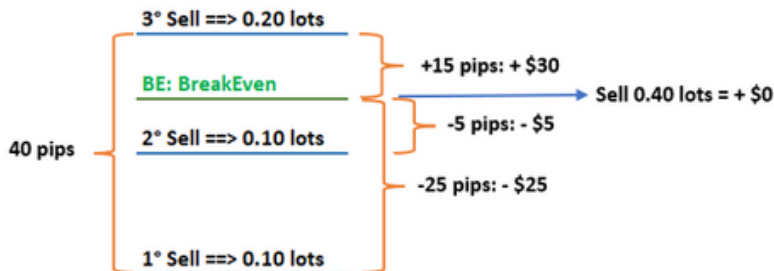

Example 2 (Buy) → 3 Trades

Example 3 (Sell) → 2 Trades

Example 4 (Sell) → 3 Trades

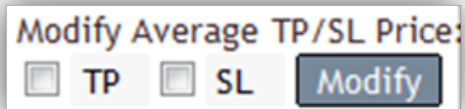

SECTION 6

“Buy” CheckBox: draws a green line at the average price level considering only “Buy” type operations of the asset on the screen.

SECTION 7

This functionality allows you to modify all open operations at the same time by calculating the total accumulated positive and negative amounts at certain levels in specific TP and SL:

- **“TP” CheckBox:** draws a green line that can be moved on the chart, calculates the positive value in total USD considering all open trades at a specific level.
- **“SL” CheckBox:** draws a red line that can be moved on the chart, calculates the negative value in total USD considering all open trades at a specific level.
- **“Modify” Button:** by pressing click, it will modify the SL and TP parameters of all operations considering the levels previously marked by the CheckBoxes.
