

Grid Girl Pro EA Manual for MT4

Description

Grid Girl Pro is an advanced Expert Advisor (EA) designed for MT4, leveraging a unique "smart grid" system. This grid activates under specific market conditions and adjusts based on economic news and volatility indicators. It employs multiple technical indicators such as RSI, Momentum, Bollinger Bands, and an original Investing news filter, minimizing market entries near significant economic events.

Key Features

- **Multi-currency capability:** Grid Girl Pro can trade multiple currency pairs simultaneously, including EURUSD, AUDCAD, GBPAUD, AUDNZD, and EURCHF.
- **Advanced news filter:** This filters entries during periods of high volatility due to economic news, ensuring trades are only executed in optimal conditions.
- **Flexible operation:** Can be updated or restarted even with open positions, offering more control and continuous operation.

Usage

Initial Setup

1. **Installation:** Attach the EA to the M30 chart of the supported currency pairs.
2. **Configuration:** Utilize the provided setfiles to configure the EA according to your trading preferences.
3. **News Site Allowance:** Ensure that your MT4 terminal allows HTTP requests to economic calendars. Go to Tools > Options > Expert Advisors and check "Allow WebRequests for listed URL:". Add the URL: <https://ec.forexprostools.com> (ensure no spaces).

Operational Guidelines

- **VPS:** Use a Virtual Private Server (VPS) with low ping to ensure that the EA operates continuously without interruptions.
- **Capital and Leverage:** A minimum deposit of \$1000 is recommended, with a leverage of 1:300 or higher for optimal performance.
- **Account Type:** Preferably use a Raw/Zero spread account; if using a standard account, ensure the maximum spread is set no higher than 15 points.
- **Strategy Tester:** When backtesting, disable the news filter and adjust the "Max spread" parameter to be higher than the tester's spread.

Support and Updates

After purchase, for support and updates:

- Leave a message on the comment tab.
- Subscribe to the channel for updates: [NextBot MQL5 Channel](#).

Settings

Here's a detailed breakdown of the settings based on the attached image:

Main Settings

- **Minimum points distance from the last order:** Sets the minimum point distance between grid orders, e.g., 100.0 points.
- **Grid order multiplier:** Determines the multiplier for subsequent grid orders, e.g., 1.1.
- **Close orders if this Minimum Profit is reached (fiat):** Closes all orders if a specified profit threshold is met, e.g., \$5.0.

RSI Indicators

- **RSiPeriod:** The period for the Relative Strength Index, e.g., 11.
- **RSI Applied price:** The price type applied to the RSI, e.g., High price.
- **RSiOverbought:** The overbought threshold for the RSI, e.g., 70.
- **RSiOversold:** The oversold threshold for the RSI, e.g., 30.

Momentum Indicators

- **Max Momentum:** The maximum value to activate momentum-based trading, e.g., 100.1.
- **Min Momentum:** The minimum momentum required before considering a trade, e.g., 99.6.

Bollinger Bands

- **BollingerPeriod:** The period for the Bollinger Bands, e.g., 50.
- **BollingerDeviation:** The deviation setting for the bands, e.g., 2.5.

News Filter Options

- **ENABLE Newsfilter:** Toggle to enable high-impact news filtering, e.g., false.
- **Also filters Moderate impact news:** Enables filtering for moderate news, e.g., true.
- **Also filters Low impact news:** Enables filtering for low-impact news, e.g., false.
- **Newsfilter's minutes duration:** The duration in minutes to pause trading before and after news, e.g., 30.
- **Newsfilter extra Symbol:** The specific symbol that triggers the news filter, e.g., USD.

Order Options

- **Chart timeframe:** The specific chart timeframe to check before placing orders, e.g., 30 Minutes.
- **MAX spread:** The maximum allowable spread for placing orders, e.g., 7 points.
- **MAX pairs traded simultaneously:** The maximum number of currency pairs the EA can trade at once, e.g., 2.
- **Maximum allowed amplitude in points of the previous candle:** Limits trading if the previous candle was too volatile, e.g., 300 points.
- **Lot size 1st order:** The lot size for the first order, e.g., 0.02.
- **Lot size 2nd order:** The lot size for the second order, e.g., 0.03.
