How to install TakePropips Donchian Trend Pro on MetaTrader 4?

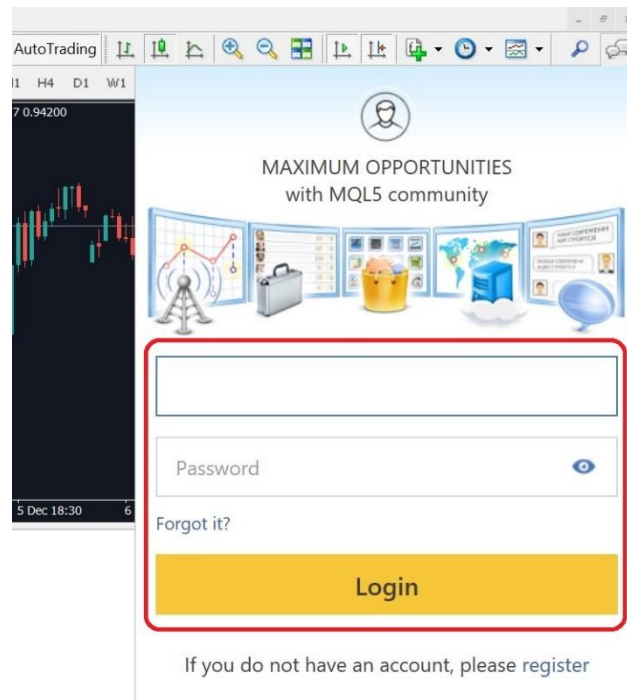

Step 1. Make sure to log in using your MQL5 account on MT4

To check if you are logged in, click the highlighted icon on the right upper corner of your MT4 terminal.

Make sure that the MQL5 account that you are logging in is the same account you used to purchase the TakePropips Donchian Trend Pro.

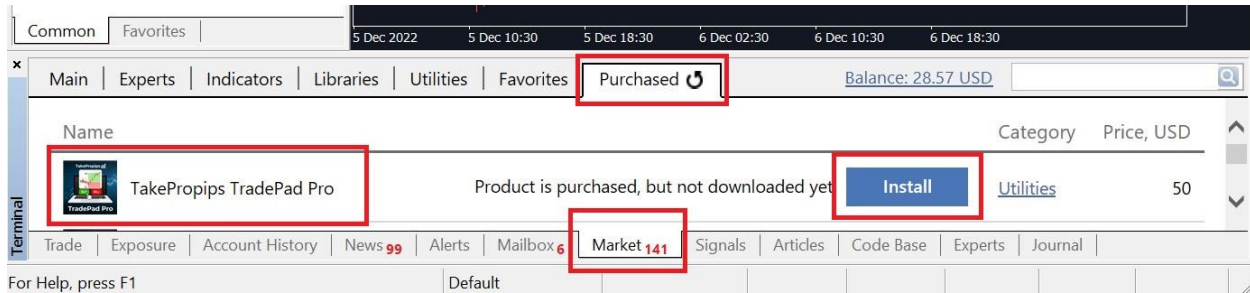

If you are not logged in, you will see this pop-up. You need to enter your MQL5 credential to continue with the installation.

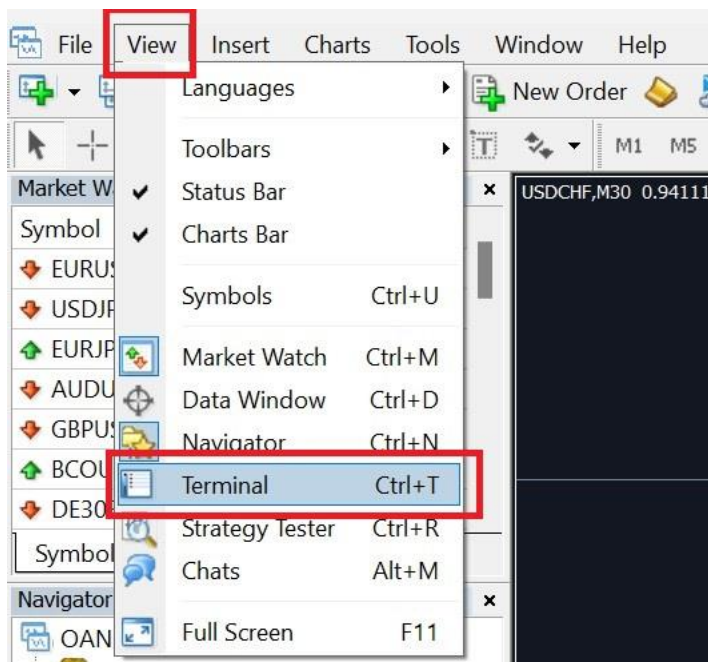

Step 2. Install the TakePropips Donchian Trend Pro

Go to your Terminal panel and then click “Market” tab. After that, click the “Purchased” tab. Then find the “TakePropips Donchian Trend Pro” and then click “Install”. After you click “Install”, the button should change to the word “Open”. You can click Open which will highlight the program on your Navigator panel.

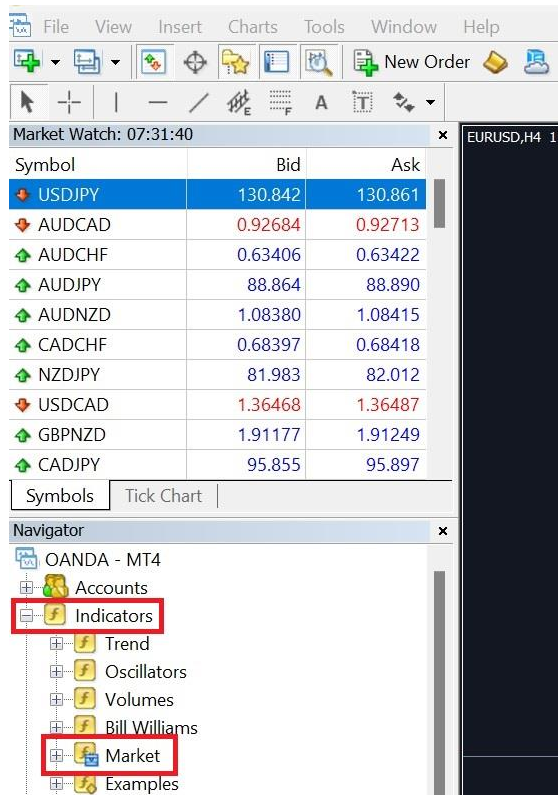

If you do not see the Terminal panel on your MT4, then you can press Ctrl + T or go to “View” and click “Terminal” to see the Terminal panel.

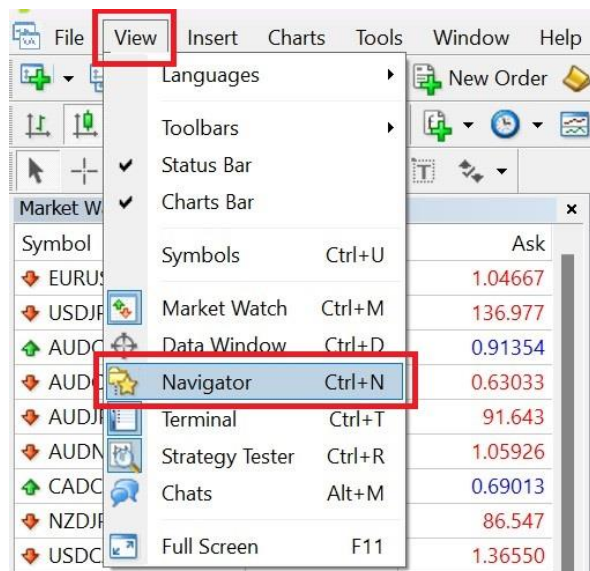

Step 4. Apply the TakePropips Donchian Trend Pro to the chart

Go to your Navigator panel and navigate through “Indicators” -> “Market” -> “TakePropips Donchian Trend Pro”.

Double click or drag the TakePropips Donchian Trend Pro to the chart. You should then see a dialog panel appear after doing this.

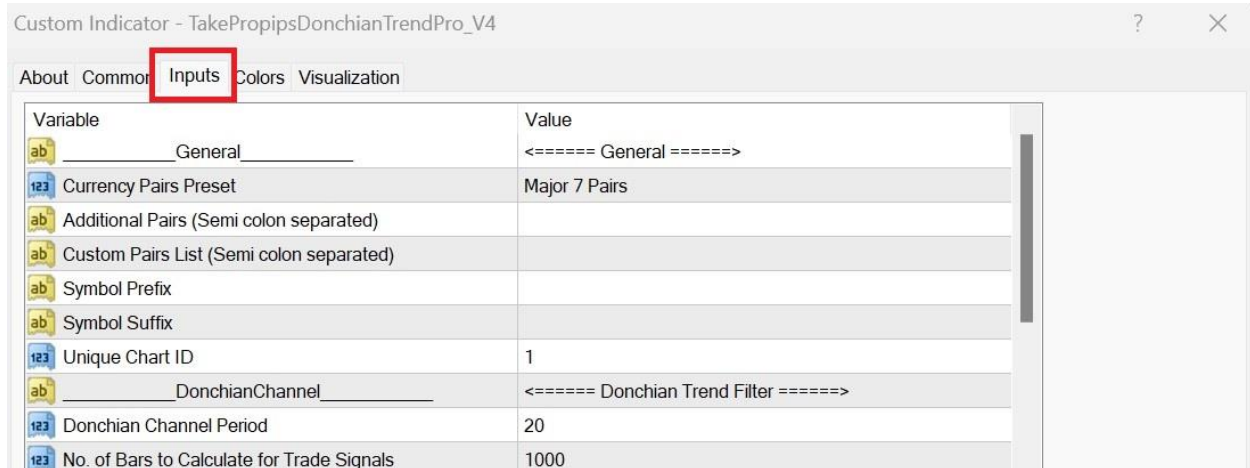

If you do not see the Navigator panel, then press Ctrl + N or go to “View” and click “Navigator”.

Step 6. Check and customize input settings

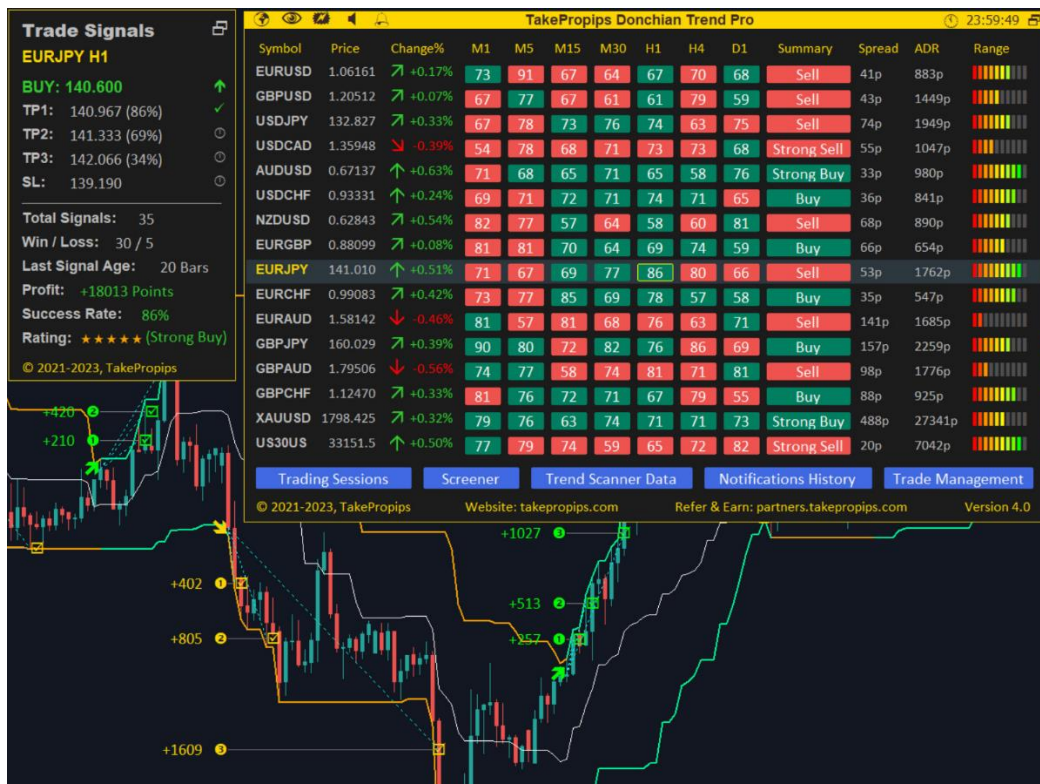

Go to “Inputs” tab to see all the available input settings that you can modify for the TakePropips Donchian Trend Pro. You can refer to the user manual to see the explanation of each input setting.

NOTE: If the pair name on your broker has a suffix (example: “EURUSD.m” instead of just “EURUSD”), then you will need to add the suffix .m to the Symbol Suffix input setting.

Step 7. Congrats! The installation is successful!

You should now see the trading dashboard on the chart along with the pairs you specified on the input setting.

Troubleshooting

I do not see the pairs on the dashboard. What can I do to fix this?

The reason why the pairs are not showing is because the pairs name on your Market Watch window does not match with the pairs name you set on the input settings of the Donchian Trend Pro.

Example: If the pair name on your broker has a suffix (example: “EURUSD.m” instead of just “EURUSD”), then you will need to add the suffix .m to the Symbol Suffix input setting.

To go to the input setting after you have applied the TakePropips Donchian Trend Pro to the chart, press Ctrl + I or right click anywhere on the chart and hover over the “Indicators List” and click “Edit”.

This screenshot shows the 'Inputs' tab of the settings window. It contains a table with 'Variable' and 'Value' columns. The 'General' section is expanded, showing options like 'Currency Pairs Preset' (set to 'Popular 14 Pairs'), 'Additional Pairs', 'Custom Pairs List', 'Symbol Prefix', 'Symbol Suffix' (which is highlighted with a red box), and 'Unique Chart ID' (set to '1').

Variable	Value
General	<===== General =====>
Currency Pairs Preset	Popular 14 Pairs
Additional Pairs (Semi colon separated)	
Custom Pairs List (Semi colon separated)	
Symbol Prefix	
Symbol Suffix	
Unique Chart ID	1
