1. Strategy:

Gold Scalping Expert is a very intelligent smart algorithm which exploits the reaction of gold during various high-impact events like geo-political news, pandemics, and economic changes. This system trades breakouts using the popular zig-zag indicator by placing pending orders at the turning points and when the price breaks out beyond these levels the orders will get triggered. The EA is using a very smart trailing stop and dynamic stop loss to protect your account and manage the risk properly without using martingale techniques.

The EA will wait for a new **m30** candle before it puts buy pending orders at the top of the zig-zag indicator and sell pending orders at the bottom of the zig-zag indicator. The amount of pending orders can be adjusted according to your settings. The EA has a smart stop loss and will close open negative orders automatically in a loss using the zig-zag indicator if market breaks out to the opposite.

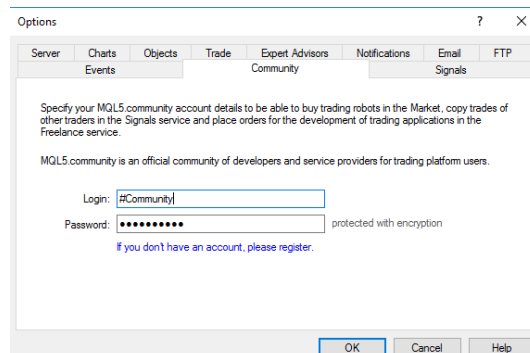

PS: The EA uses 2 strategies and if you allowed Max Pending Orders = 4 then there can be 8 pending orders (4 from strategy 1 and 4 from strategy 2)
