1. Value of the MT 5 to MT 4 Trade Copier

With this MT 5 to MT 4 Trade Copier, there are unlimited opportunities. You can make money or you can test your brilliant trading strategy in the international Meta Trader 4 trading competition using your Meta Trader 5 expert advisors. Here are few considerations about the value of this MT 5 to MT 4 Trade Copier.

- Get Meta Trader 5 signals in your Meta Trader 5 demo account, copy the signal to your live Meta Trader 4 accounts (You can mix Meta Trader 5 and Meta Trader 4 signals into one live MT 4 account with this Trade Copier.)
- Build and test your trading strategy in the advanced strategy tester in the Meta Trader 5 and use the Expert Advisors with your favourite Meta Trader 4 live brokers.
- Build and test your trading strategy in the advanced strategy tester in the Meta Trader 5 and enter the international Meta Trader 4 Trading competition. (Note that there are dozens of FX trading competition in Meta Trader 4 but none in Meta Trader 5.)
- Saving a lot of time from doing conversion coding work from Meta Trader 5 to Meta Trader 4 (There is no need to spend a lot of time to rewrite your code from Meta Trader 5 to Meta Trader 4. Just simply copy the trades from your Meta Trader 5 terminal to Meta Trader 4 terminal.)
- Distribute signals from your Meta Trader 5 expert advisors to your multiple Meta Trader 4 terminals. (This trade copier support up to five different Meta Trader 4 terminals.)

Doesn't matter you are coder or general users or beginner or professional. You will get lots of benefits from this MT 5 to MT 4 Trade Copier.

2. Main Features of the MT 5 to MT 4 Trade Copier

This MT 5 to MT 4 Trade Copier was updated many times by adding advanced features at each time. Currently available features include:

- Copy trades from a Meta Trader 5 terminal up to five different Meta Trader 4 terminals in the same PC.
- The trade copier will not disturb your manual trades and other trades by other expert advisors in your Meta Trader 4 terminal. Therefore you can combine other expert advisors

with this trade copier. You can even mix MT 5 and MT 4 signal subscription into your live Meta Trader 4 terminal.

- The Trade Copier has the automatic scaling function of your Meta Trader 4 lot size by comparing the balance between your MT 5 and MT 4 terminal. However you can also control your lot size by using simple multiplier.
- You can hide specific currency pairs in your MT 5 terminal and you can skip these currency pairs from copying to your MT 4 terminal.
- You can copy positions from your MT 5 terminal to MT 4 terminal regardless of the different suffix in different brokers.
- Using the custom user mapping function, you can walk around with unmatched currency pairs or commodity symbols between brokers. For example, you can make the trade copier to copy the trade of "Gold" in MT 5 terminal to "XAUUSD" in MT 4 terminal. You can do the same for Silver too.
- You can trade all the 6 character symbols including Forex and commodities, etc.

3. Quick 5 minutes installation guide for experienced users of MetaTrader Platform

You need following two files:

- MT5PositionTranslator.ex5 EA to translate your trade positions from your MT5 platform. (Note that the file name maybe slightly different to yours.)
- CopyPositionsFromMT5.ex4 EA to copy your MT5 trades to your MT4 platform. (Note that the file name might be slightly different to yours.)

- 3. Copy "MT5PositionTranslator.ex5" file to your MetaTrader 5 expert advisor folder
- 4. In your Market Watch of Metatrader 5 platform, keep only the currency pairs you want to trade (keeping few other currency pairs in the market watch are fine but better to keep minimum number of the currency for faster trade copy.
- 5. Copy "CopyPositionsFromMT5.ex4" file to your MetaTrader 4 expert advisor folder
- 6. In your Market Watch of Metatrader 4 platform, keep the same currency pairs as possible with your MetaTrader 5 platform but this is not compulsory (but at least remove some non Forex pairs from your Market Watch such as #CLK400, etc.)
- 7. Get terminal path address of your MT4 "file" folder in your "MQL4" folder and enter that address when you attach "MT5PositionTranslator.ex5" to any chart in your MetaTrader 5 platform (better to attach to an active currency pairs for fast update).
- 8. Attach "CopyPositionsFromMT5.ex4" file to any chart (better to attach an active currency pairs for fast update) in your MetaTrader 4 platform.
- 9. That is it. Try to open any position in your MT5 platform manually. If the EAs are installed correctly then MT4 terminal should copy the positions immediately.
- 10. To use this MT5 to MT4 Trade Copier with your expert advisors, you need to open a chart to attach your expert advisors. Therefore, you need two charts in your Metatrader 5 platform if you want your profitable MT 5 EA to run with this Trade Copier.
- 11. Note that you can copy your positions from MetaTrader 5 platform up to five different MetaTrader 4 platforms in the same PC of yours. Just copy their terminal path to "MT5PositionTranslator.ex5" EA when you attach them on your chart.
- 12. Choose if you want to scale MT 5 lot automatically or manually. If you set "AutomaticScaleOfPosition"=true, then the Trade Copier will scale MT 5 lot size automatically using the balance in your MT 4 and MT 5 terminals. Use "Ratio_Of_MT4_Lot_To_MT5_Lot" variable to further increase your MT 4 lot size. When "AutomaticScaleOfPosition"=true, then your final Lot Multiplier is calculated using following formula:

Lot Multiplier = (MT 4 balance /MT 5 balance) * Ratio_Of_MT4_Lot_To_MT5_Lot.

13. "AutomaticScaleOfPosition"=false, then "ManualLotMultiplier" variables in your "CopyPositionsFromMT5.ex4" EA will be used to scale your MT 5 lot size for your MT 4 terminal. "ManualLotMultiplier" = 1.0 means that the exactly same lot size from MT5 platform will be copied to your MT 4 platform. If you choose ManualLotMultiplier=2.0, then twice greater lot size will be copied to your MT 4 platform.

4. Step by Step guide to install for Meta Trader beginners

You need following two files:

- MT5PositionTranslator.ex5 EA to translate your trade positions from your MT5 platform. (Note that the file name maybe slightly different to yours.)
- 2. CopyPositionsFromMT5.ex4 EA to copy your MT5 trades to your MT4 platform. (Note that the file name might be slightly different to yours.)

Firstly place "MT5PositionTranslator.ex5" file to your Expert advisor folder for your Meta Trader 5. I will show you the easiest way to find your expert advisor folder. Click any expert advisor on your "Navigator" and click "Modify" as shown in the screenshots below. Then you will open the Meta Editor for MQL 5. On the left part of the Meta Editor, click "Expert" folder and click "Open Folder". The Meta Editor for MQL 5 will open your advisor folder. Simply copy and paste the "MT5PositionTranslator.ex5" to your expert advisor folder anywhere. Once you have copied the EA, you need to restart your MT 5 platform to see "MT5PositionTranslator EA" on your "Navigator". You need to repeat exactly same steps to copy "CopyPositionsFromMT5.ex4" files to your advisor folder in your Meta Trader 4 folder.

Screenshot: How to open your expert advisor folder

Screenshot: Your expert advisor folder in your Meta Trader 5 folder

To copy trades from your MT 5 to MT 4, you just need three steps to follow:

1. Get the terminal path address for your MT 4 file folder

Firstly you need to get terminal path for your MT 4 file folder. It is easy. Open your MQL 4 editor and select MQL 4 folder and open the folder as shown below.

\diamond							
File I	dit View Tools Help						
💫 New	📂 🖻 💕 🛄 🗞	Var	₩ ^f •	Compile	00	006

Screenshot: You need get the address for your files folder (just left click on the address bar)

2. Things to do for your Meta Trader 5 platform

Secondly make sure that you allow automated trading for your MT5 platform and also allow DLL imports for your MT 5. To do this, click on "Options" menu. Check on "Allow automated trading" and "Allow DLL imports".

Screenshot: How to open "Options" menu in MT5 platform

				C	ptions				?	×
Server	Charts	Trade	Expert Advisors	Events	Notifications	Email	FTP	Community	Signals	
، 🔽]]]	Allow auto Disable Disable Disable	omated t automa automa automa	rading ted trading when t ted trading when t ted trading when t	he accou he profile he charts	nt has been ch has been char symbol or peri	anged nged od has b	een cha	nged		
	NIOW DEL		potentiany danger	ous, ena		sicu app	incauoris,	,		
						ОК		Cancel	He	p

Screenshot: Check for "Allow automated trading" and "Allow DLL imports"

Then attach the EA "MT5PositionTranslator" to the chart of most popular pairs such as EURUSD. Make sure that you allow auto trading for this EA as shown below.

		MT5	5PositionTranslat	or_V3.0 3.0		? ×
Common	Inputs	Dependencies				
	5	MT5PositionTranslate Copyright 2014, Y H Seo	or_V3.0 3.0			
	C	✔ Allow AutoTrading		ОК	Cancel	Reset

Screenshot: Check "Allow AutoTrading"

Copy and paste the MT 4 terminal path you copied from our previous step as shown below. Then click OK. Make sure the EA icon is not red.

/ariable	Value	
MT4 Terminal Path for 1st MT4 platform	46DA28A73293046360FB1F9EDF3\MQL4\Files	
MT4 Terminal Path for 2nd MT4 platform		
MT4 Terminal Path for 3rd MT4 platform		
MT4 Terminal Path for 4th MT4 platform		
MT4 Terminal Path for 5th MT4 platform		
		land

Screenshot: Copy and paste the terminal path address to your inputs

3. Things to do for your Meta Trader 4 platform

Thirdly make sure you allow auto trading in your MT 4 platform as shown below:

			(Options				?
Server Cha	arts Objects	Trade	Expert Advisors	Notifications	Email	FTP	Events	Community
	I Enable I E	e Expert))isable ex)isable ex	Advisors (except fo perts when the ac perts when the pro	r Custom Indica count has been ofile has been c	ators and n change changed	l Scripts) ed

		onfirm Dl	L function calls					
	Allow	external e	xperts imports					

Screenshot: Check boxes to allow "auto live trading" and "DLL imports"

Then attach "CopyPositionsFromMT5" EA to your MT 4 platform. Before attach "CopyPositionsFromMT5" to your chart, you can choose to scale your MT 5 lot size either automatically or manually. If you set "AutomaticScaleOfPosition" = true, then the Trade Copier EA will scale your MT 5 lot size automatically according to your balance comparison between your MT 4 and MT 5 terminal. If you set "AutomaticScaleOfPosition" = false, then the Trade Copier EA will scale

your MT 5 lot size using "ManualLotMultiplier" variable. ManualLotMultiplier = 1.0 means that the exactly same lot size from MT5 platform will be copied to your MT 4 platform. If you choose ManualLotMultiplier=2.0, then twice greater lot size will be copied to your MT 4 platform. FileLocation variable is used if the default installation guide still gives you error message like "5004" file opening errors. This error is happened because MT 5 EA can't access to the shared folder used by MT 4 terminal. To resolve this problem, read our next section. If the default installation works fine then you just leave the FileLocation variable empty. "MT4Suffix" input is used if your MT 4 terminal uses Forex pairs with suffix such as "EURUSD.ecn" or "EURUSD.m". Just type the suffix in this variable to make the trade copier work. (Note that you don't have to worry about the suffix for MT 5 terminal at all.)

5. Few tips to make the MT5 to MT4 Trade Copier to copy trades faster

To make the MT 5 to MT 4 trade copier to copy the trades faster, you should follow the tips below:

- 1. Keep the currency pairs you want to trade on the Market Watch only if possible. Smaller number of currency pair n the Market Watch in MT5 and MT4, the trade copier will be copying the trades faster.
- 2. Always remove Non Forex symbols in your market watch as this will give the problem for your Trade Copier.

- 3. Decide how you want to scale your MT 5 lot size for your MT 4 lot size (i.e. automatically or manually?)
- 4. Attach the MT5 expert advisor first and then attach the MT4 expert advisor.
- 5. If you get errors or problem with this trade copier, it is often best to remove the EA and reattach the EA for fresh start up for both your MT 4 and MT 5 terminals.
- 6. The trade copier was tested for the live account of mine as well as other customers. Therefore it should work without any problem once they start to work in your MT5 terminal.
- 7. Check your Expert tabs and Journal tabs if any errors happen and report to author.

6. Trouble Shooting

These are potential source of errors. I identified the sources of errors here for the convenience of users:

[Trouble 1] Your PC Operating systems (i.e. Window 8 or 7) do not allow the MT 5 terminal to access to the shared folder of MT 4 terminal. This is the common problem for other existing software built for Window 8 and 7 currently.

[Trouble 2] Your MT 4 terminal may have non Forex pairs such as "XAUEUR" or "#NKDM4". This can be checked in your market watch. As you see from the picture below, XAUEUR or #NKDM4 is not a standard Forex pairs. This will cause the problem for the trade copier.

Market Watch: 23:00:00		×	
Symbol	Bid	Ask ^	
🕹 XAUEUR	941.34	942.54	
🛧 XAGUSD	19.80	19.88	
🛧 XAGEUR	14.39	14.47	
XPTUSD	1407.11	1412.11	
XPDUSD	772.60	776.60	
#NKDM4	This is had	symbols	for trade conie
🕁 #ESM4		symbols	Tor trade copier
	16239	16242	
🗣 #NQM4	3563.25	3564.25	
#FFIM4	6544.5	6546.0	
	3099	3102	
#FSMIM4	8239	8245	
🛧 #FDXM4	9592.0	9595.5	
🕁 #APM4	5358	5378	
Symbols Tick Chart	1100.0	1102.5	-
Navinator		×	

[Trouble 3] The Forex pairs with suffix such as "EURUSD.ecn" will cause trouble for trade copier too. You can trade with Forex pairs with suffix such as "EURUSD.ecn" or "EURUSD.m", etc in your MT 4 terminal. Note that the Forex pairs with suffix in MT 5 terminal do not cause any problem. Therefore you don't have to do anything for the Forex pairs with suffix in your MT 5 terminal.

[Trouble 4] Your MT 4 log file might become too large for writing "5004" file opening errors" too frequently. This is very rare events and this happens because the trade copier does not function correctly before. However once the Trade copier work correctly then your MT4 log file will not grow. Also delete the large log file from your MT 4 terminal and they are located in your MQL 4 folder in your terminal path. New log file will be created by MT 4 terminal.

Solution to Trouble 1

Trouble 1 is happening because MT 5 EA can't access to shared folder (known as UAC) which is used by your MT4 terminal. This strict restriction is often troublesome for many commercial software. In this case we have to avoid the direct access of MT 5 EA to the shared folder of MT 4. To avoid the direct access, follow these steps:

- Create any folder in your hard drive such as "C:\temp" or whatever (but do not use the root drive "C:\" as you can't write anything on the root drive for some Operating system.)
- 2. Copy and paste this address ""C:\temp" to your MT 5 EA

C:\temp	
	Load

3. Copy and paste the same address "C:\temp" to the FileLocation in your MT 4 EA.

Cc	ppyPositionsFromMT5_V3.9	? ×
About Common Inputs Dependencies		
Variable	Value	
AutomaticScaleOfPosition	true	
Ratio_Of_MT4_Lot_To_MT5_Lot	1.0	
Manual Lot Multiplier	1.0	
123 CopyInterval	300	
B FileLocation	C:\temp	
ab MT4Suffix		
		Load
		Save
	ОК	Cancel Reset

4. As the MT 4 terminal get lost values for input variables sometimes, it is better to save those values somewhere safer. So you can use them later. So click "Save" button and give some name to the .set file and save them.

Plus: This should 3 step should resolve the problem. In addition quite often you might resolve any errors when you restart your MT4 and MT5 terminals or reattach the MT5 and MT4 EAs on new charts. If these steps do not resolve the problem, then please contact me for further communication.

Solution to Trouble 2

Solution for Trouble 2 is simple. Just hide all this non Forex pairs in your Market watch by "Hide All" option. Then keep the Forex pairs you want to trade in real live account only.

Solution to Trouble 3

To trade with Forex fair with suffix, check what suffix your MT4 terminal. For example, for EURUSD.ecn, the suffix is ".ecn". Write this suffix to the MT4 Suffix input variable in the CopyPositionsFromMt5 EA as shown in the picture below. However before you type this suffix in your MT 4 Trade Copier, please try to use this Trade Copier without suffix first. Sometimes, the Trade Copier works without suffix.

Variable	Value	
Automatic Scale Of Position	true	
Ratio_Of_MT4_Lot_To_MT5_Lot	1.0	
Manual Lot Multiplier	1.0	
CopyInterval	300	
ab FileLocation		
ab MT4Suffix	.ecn	
		Load
		Save

7. Trade Copier Variable Explanation

For MT5PositonTranslator EA in your Meta Trader 5 platform,

- MT4 Terminal Path for 1st MT4 platform Copy and paste the first terminal path of your Meta Trader 4
- MT4 Terminal Path for 2nd MT4 platform Copy and paste the second terminal path of your Meta Trader 4 (Use this if you want to copy trades for your another Meta Trader 4 terminal.)
- 3. MT4 Terminal Path for 3rd MT5 platform Copy and paste the third terminal path of your Meta Trader 4 (Use this if you want to copy trades for your another Meta Trader 4 terminal.)

- 4. MT4 Terminal Path for 4th MT5 platform Copy and paste the fourth terminal path of your Meta Trader 4 (Use this if you want to copy trades for your another Meta Trader 4 terminal.)
- MT4 Terminal Path for 5th MT5 platform Copy and paste the fifth terminal path of your Meta Trader 4 (Use this if you want to copy trades for your another Meta Trader 4 terminal. Note that you can copy up to five different Meta Trader 4 terminals from the single Meta Trader 5 terminal.)
- 6. UseCustomMapping This variable determines to use your own custom mapping file when this trader copier copy trades to your Meta Trader 4 terminal. The default custom mapping file is located in your terminal path of Meta Trader 5 platform. You can simply open this file in your note pad. Occasionally you can have the same symbols in your both MT 5 and MT 4 terminal but with different name. For example, your MT 5 broker may assign "Gold" for Gold/USD instrument but your MT 4 brokers may assign it XAUUSD for Gold/USD. In this case you can just change "Gold" into "XAUUSD" under MT 4 name column. Then the trade copier will copy of the position of "Gold" in your MT 5 to "XAUUSD" in your MT 4 terminal. This user custom mapping file can be also used to hide some specific currency symbols you don't want to copy trades. For example, let's say you don't want to copy trades for AUDCAD and AUDNZD pairs in your Meta Trader 5 terminals as you believe AUDCAD and AUDNZD signals are not doing good job. Then simply just put "None" in the place of AUDCAD and AUDNZD pairs under MT 4 name column. As a default, this variable is set to false. Setting it false will do nothing and the trade copier will just perform normal operations. When setting is true, the trade copier will only take effects on the change in this custom mapping file. Also note that if you set this variable to false back from true, your custom mapping file will be rewritten with default settings. So once you changed this custom mapping file, it is better to save the file to somewhere safe in your hard drive. After you have made a change in your customer mapping file, you need to detach your Trader copier EA from your MT 5 chart and reattach them to take effects of this change.

Computer → OS (C:) → Users →	▶ AppData ▶ Roaming ▶ MetaQue	tes → Terminal → F	792711EEED0C4A8	88615E52DD459D4CC	MQL5 → Files

PositionsFromMT5.dat		06/05/2014 16:54	DAT File	2 KB	

For CopyPositionFromMT 5 EA in your Meta Trader 4 platform,

- AutomaticScaleOfPosition Automatic scaling of MT 5 lot size is done by comparing the balance in your MT 4 and MT 5 terminals. But you can still use "ManualLotMultiplier" variable to scale the MT 5 lot as you wish. Just set "AutomaticScaleOfPosition" = false, to use this manual scaling of MT 5 lot.
- Ratio_Of_MT4_Lot_To_MT5_Lot If you set "AutomaticScaleOfPosition"=true, then the Trade Copier will scale MT 5 lot size automatically using the balance in your MT 4 and MT 5 terminals. Use "Ratio_Of_MT4_Lot_To_MT5_Lot" variable to further increase your MT 4 lot size. When "AutomaticScaleOfPosition"=true, then your final Lot Multiplier is calculated using following formula:

Lot Multiplier = (MT 4 balance /MT 5 balance) * Ratio_Of_MT4_Lot_To_MT5_Lot.

 ManualLotMultiplier - If you set "AutomaticScaleOfPosition"=false, ManualLotMultiplier will be effective. Your lot size in your MT 4 terminal will be calculated simply by multiplying ManualLotMultiplier to your MT 5 lot size.

- 4. CopyInterval Copy interval in milli seconds. (1000 ms = 1 sec)
- 5. FileLocation Alternative file Path location if default terminal path setting does not work.
- MT4Suffix if your MT 4 broker have suffix like .ECN or .m, etc, then just add suffix to here.
 You can also do the same thing by changing in symbol name in the custom mapping files.
- 7. EAMagic Order Magic number for your copied positions
- EAComment Order Comment for your copied positions. In the default setting this is empty.
 If this is empty, the EA will create own EA comment like this "MT 5" + your MT 5 login ID.
 This was added to allow you trace from which MT 5 terminal the positions were copied from.

8. How to get the unlimited live account version of this Trade Copier

It is very simple just contact me on <u>FinancialEngineerPro21@gmail.com</u> for the unlimited live account version. The price is very reasonable and affordable.
