

## Your\_Lucky\_EURGBP\_v2 Guide

I make some EA and I want to develop it together.

Your\_Lucky EA is free, you can get and use Unlimited and I include mql source code for the initial version.

I need donations for the cost of developing the EA I, but you only need to do if you like or want to help me, or are profit from this EA, other than that you do not need to do so, you have to get the free goods.

for certain reasons I only share my ex4 files to update the latest version, given the many people who can sell them if I share my mql source update.

but do not worry, because for the EA is required only need the ex4 files. (Your\_Lucky\_EURGBP\_v2.ex4)

I will try to explain the function in this guide, is (Your\_Lucky\_EURGBP\_v2.ex4).

EA or other versions that I include in the file with these instructions have some differences with the final version will I explain this.

Before you open the program MetaTrader4, make sure you save the file you downloaded with this manual to the appropriate folder.

As an example I will use MT4 Alpari-UK.

Files that you download consists of 3 folders (EA, Indicator, templates)

1. Open the **EA** folder and copy all the files in the folder and then paste [C:\ProgramFiles\MetaTrader - Alpari UK\experts](#)
2. Open the **Indicators** folder and copy all the files in the folder and then paste [C:\ProgramFiles\MetaTrader - Alpari UK\experts\indicators](#)
3. Open the **Template** folder and copy all the files in the folder and then paste [C:\ProgramFiles\MetaTrader - Alpari UK\templates](#)

Now you can open the program MetaTrader4,

Open **EURGBP** and select **TimeFrame M5**

and then switch the template by clicking [Charts\Template\your\\_lucky templates](#).

**You will see charts like this picture:**

after you activate the template "your\_lucky templates" in the chart means that you have a complete EA and its indicators are required by EA,.

Now we need to activate the EA in the charts.

**Right-click select Expert Advisor Propertis click (or press the F7).**

after you choose the **Properties** or pressing the button **F7**

**The image will appear**

Klik "OK" and the EA is ready to do Automated Trade for you.

**Another thing that needs to be is setting in the EA, you need to change the settings are:**

- **OpenHour = 21 (default)**

- **CloseHour = 5 (default)**

This related to the clock / timer broker, the broker note on the hour charts, no matter where you are now and what time you are in, because these settings are not related to the local time but the time to read the broker on MT4.

EA will only make trading in the range of time **OpenHour - CloseHour**

- **Risk = 20 (default)**

Risk set the number of the Lot will be opened by EA using the LotsOptimized Setting TRUE with calculations **AccountFreeMargin / Risk / MaxTrades**.

The base system used by EA is looking for conditions around the sideway Asian Session with small **TakeProfit 5-9 Pips** and **Stoploss 28-32 Pips**

During you want to use this EA, the computer must be online and MT4 connected either with your broker.

Spread of your broker is another vital setting for scalper strategy. Do not use scalper strategy on brokers with spread = 5 or more. For scalper strategy allowed spread size is 2-4 only.

Hopefully the results of this work can be useful for many people to make profit.
