

EA Battosai Guide

INSTALLATION

Before you open the program MetaTrader4, make sure you save the file you downloaded with this manual to the appropriate folder.

As an example I will use MT4 Alpari-UK

Files that you download consists of 3 folders (EA, Indicator, Templates)

1. Open the EA folder and copy all the files in the folder and then paste
[C:\ProgramFiles\MetaTrader-Alpari UK\experts](#)
2. Open the Indicators folder and copy all the files in the folder and then paste
[C:\ProgramFiles\MetaTrader-Alpari UK\experts\indicators](#)
3. Open the Template folder and copy all the files in the folder and then paste
[C:\ProgramFiles\MetaTrader-Alpari UK\templates](#)

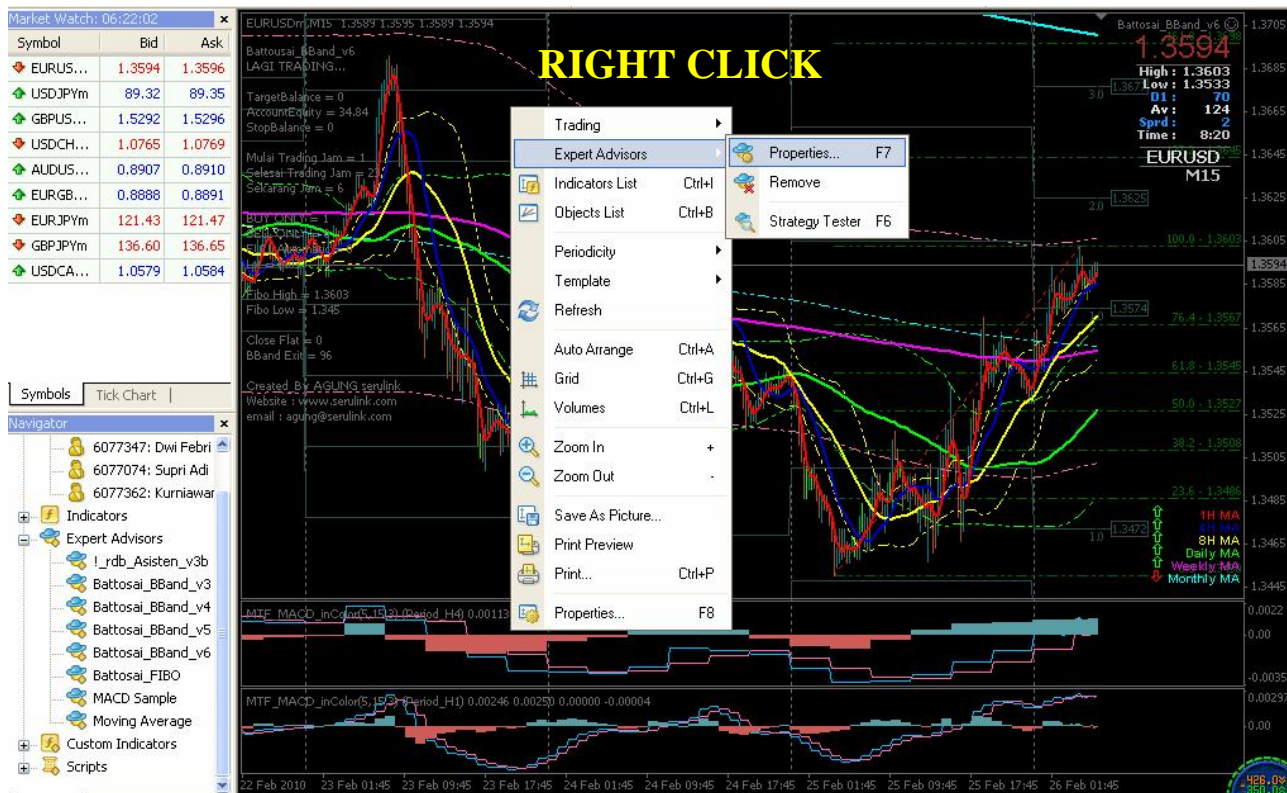

Now you can open the program MetaTrader4, open any pair and select TimeFrame M15 and then switch the template by clicking [Charts\Template\Battosai](#)

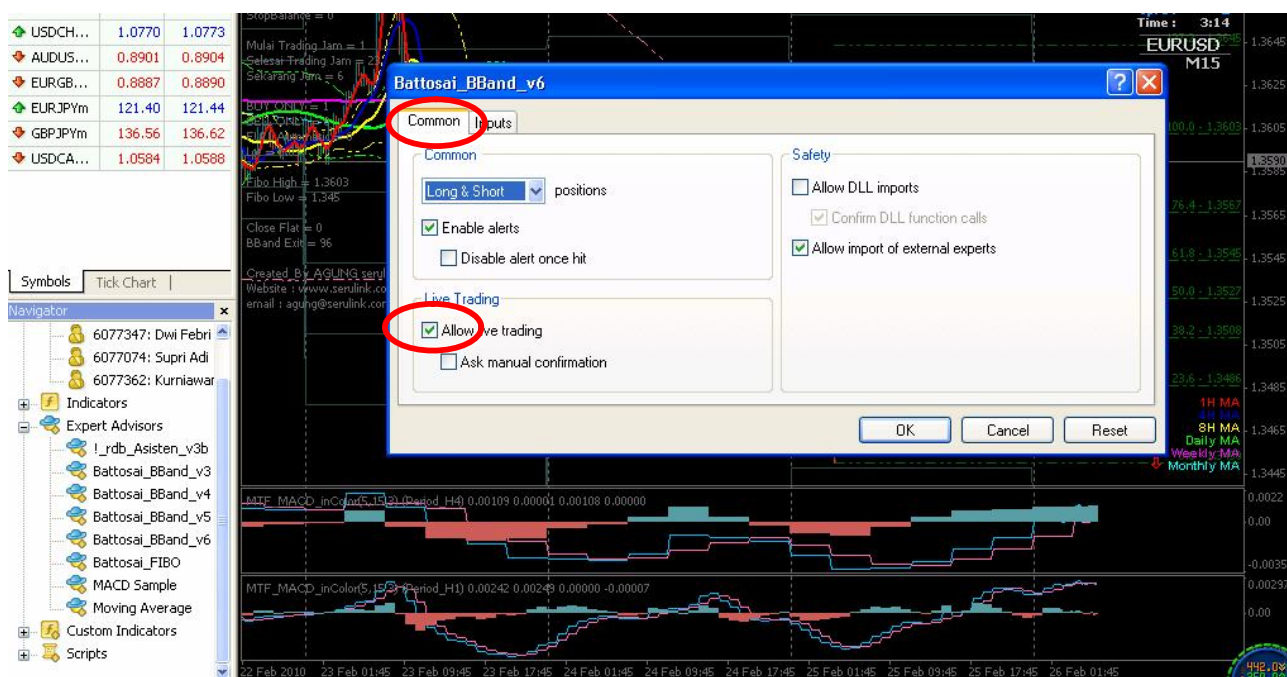

After you activate the template "Battosai" in the chart means that you have a complete EA and its indicators are required by EA.

Now we need to activate the EA in the charts.

Right-click select Expert Advisor Properties click (or press the F7)

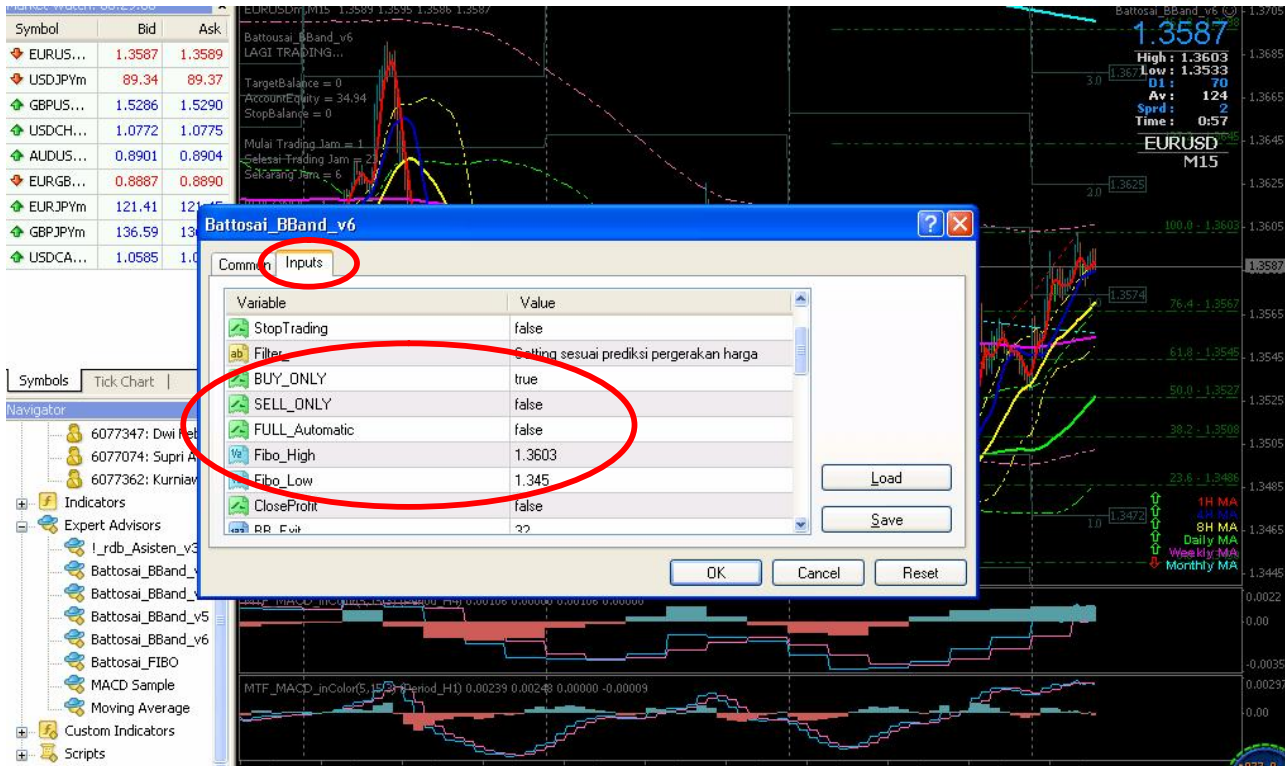

After you choose the Properties or pressing the button F7
The image will appear

And you should have predicted the direction of market movement and determine the level of high / low on the last swing.

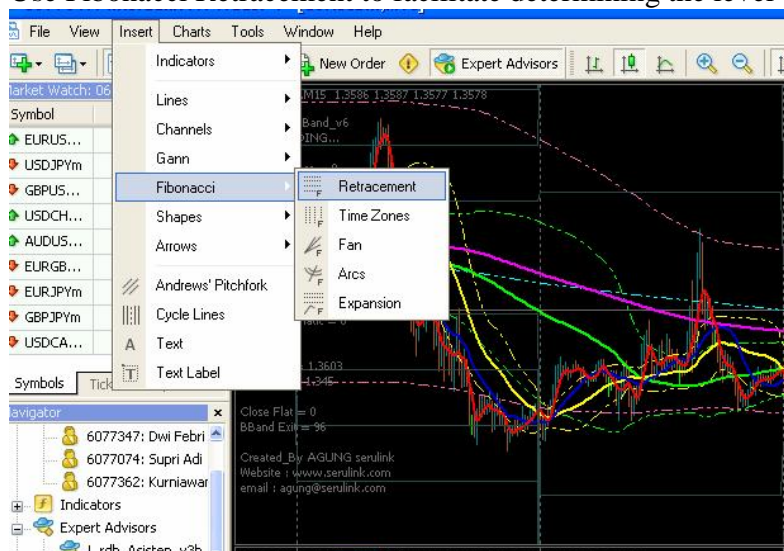

- if the market movement prediction is rising, set “BUY Only” = TRUE
- if the market movement prediction is down, set “SELL Only” = TRUE

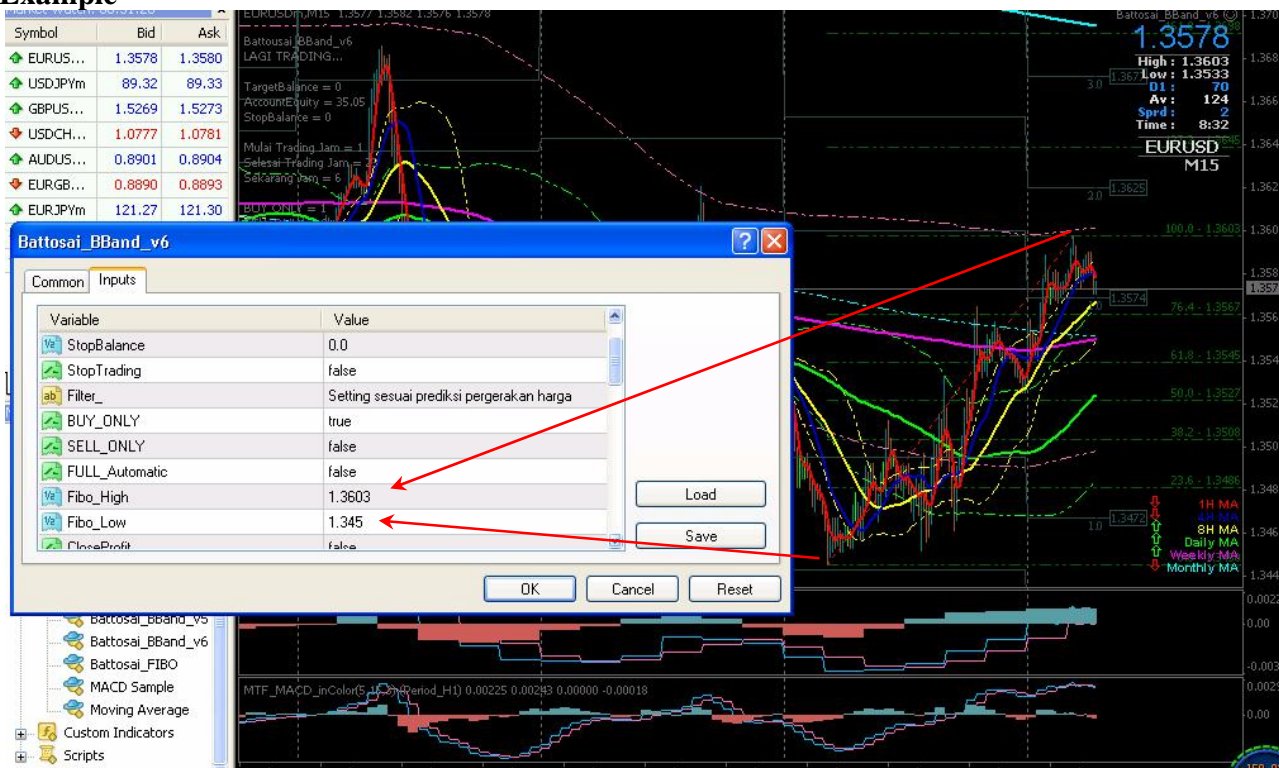

Klik “OK” and the EA is ready to do Automated Trade for you .. :p

Determine The Level Of High / Low On The Last Swing

Use Fibonacci Retracement to facilitate determining the level of high / low on the last swing

Example

I hope this EA can help you get the profit from forex trading :p
