

Support & resistance horizontals.

The S&R horizontals would be drawn on the **previous** candle and remain until the price has broken through and the horizontal would be deleted.

QUESTION 1 – is it possible to get these S&R levels drawn **as soon as** the CCI indicator crosses a CCI level, and deleted if it re-crosses the same level on the same candle?

QUESTION 2 – if so, is it possible to get 3 separate indicator settings to work independently?
