

We create

convenient tools

for successful trade

WAVE-AutoTrendLines (WATi) is a multifunctional tool for the market price charts graphical analysis.

This tool is implemented as the indicator for MetaTrader4 (MT4) (© 2000-2008, [MetaQuotes Software Corp](#)) trading platform

WAVE-AutoTrendLines (**WATi**) is an assistant for analysis and forecasting of the pricing behavior and for a successful commercial decision.

You can use WAVE-AutoTrendLines (WATi):

1. To arrange a short-term trade (like swing trade)
2. To arrange a long-term trade
3. Use in conjunction with the Bill William's system (New Trading Dimensions by PhD. B. Williams)
4. For the Elliott waves market analysis
5. To identify graphic patterns

What is WATi:

1. **Exact waves pivots for the high, low and lowest period.** (red, yellow, purple colors by default)

WATi draws high, low and lowest semaphores on price chart.

The semaphores calculation made on the basis of the wave (pulse) formations identification.

WATi does not use ZigZag or B. Williams fractals algorithms.

Therefore, semaphores are stable and not repainted

2. **Automatic trend lines of high and low periods.** (red, yellow colors by default)

After identifying waves and the semaphores formation maxima and minima points of different periods), an indicator automatically creates a trend lines on the chart for high and low periods.

Trend lines are stable and not repainted.

You can switch off all or part of the trendy lines creation.

You can also adjust the number of lines to create.

3. **The High period forecast trend line.** (pink color by default)

The High period forecast trend line – this is a new indicator addition indicator.

This line will significantly increase your skills analysis and forecast price behavior.

The forecast trend line creating has a different algorithm. The current price dynamics is used in the calculation.

Trend line forecast can change its position depending on the current situation. At the same time it accurately tracks the current price behavior.

4. **The warning and alarm system of events occurring**

Indicator has a warning and alarm system. When new high or low semaphore is formed, the indicator can notify about this textual or sound alarm

WATi has flexible system configuration. Each user can customize it for their own goals and objectives.

When buying **WATi**, you receive a indicator copy for the one valid account (real or demo)
You can buy it with limited and unlimited duration.

Indicator Prices:

- 15 USD (10 EUR) - for three months
- 30 USD (20 EUR) - for one year
