INVESTMENT SERVICES

QUANTUM TRADER

Hello, and Welcome to Quantum Investment Services, LLC. We are pleased that you had the insight to join us. Within this document, you will find instructions on the installation and operation of QuantumTrader, our highly successful proprietary Expert Advisor for the MetaTrader 4 platform. During this process, if you have any questions, immediately direct them to:

support@quantum-investing.com

You will receive a prompt reply within a 1-business day maximum. Quantum Investment Services, LLC provides lifetime customer support, and is fully equipped to resolve any and all technical issues relating to our product.

INSTALLATION

The Files:

On your CD, you will find the following necessary files for the proper installation and operation of the Expert Advisor:

The EA file itself:

QuantumTrader_v5.0_Elite.ex4

The Indicator Files:

Damiani_Volt.mq4

i_Trend.mq4

MA_AngleZeroSigMa.mq4

Spread_Hi_Lo_v1a.mq4

These files must be copy and pasted into the appropriate folders in your MetaTrader 4 directory. If you are not sure exactly where you installed MetaTrader 4, by default it will be installed here:

C:/Program Files/MetaTrader 4

1). The Expert Advisor file [[quantumtrader_v5.0_Elite.ex4](#)] must be copy and pasted into the “*Experts*” folder in your MT4 directory:

For example:

C:/Program Files/MetaTrader 4/Experts

2). The Indicator Files must be copy and pasted into the *Indicators* folder, **WITHIN** this Experts folder.

For example:

C:/Program Files/MetaTrader 4/Experts/Indicators

Applying it to the chart:

In order to apply the Expert Advisor to the appropriate price chart, simply click, drag and drop the EA onto the **M5** chart. When you drop the EA on the price chart, you will be presented with a small screen with various inputs.

The Inputs:

There are many adjustable inputs, but they are very simple to understand. All inputs are set by default to optimized levels. You should leave them all at default values, EXCEPT the OpenHour and CloseHour. These must be

set according to your broker's server to the Asian session open and close. We will walk through the rest of them:

OpenHour = Set this to the open of the Asian session

CloseHour = Set this to the close of the Asian session

LotsOptimized = Leave at default.

Auto_LotsDecimal= Built-in money management engine enabler/disabler.

LotsDecimal=Leave at default

Risk = Maximum risk setting. Leave at default of 25.

Lots = Volume size of each trade.

MaxLots = MaxLots allowable for money management engine to trade.

AutoRange_SL=Leave at default.

StopLoss = 1st stop loss level. Leave at default.

SL_OutOfSession=Stop Loss level when open trades don't close before session end.

AutoRange_TP=Leave at default.

AccountProfitClose=Leave at default.

TakeProfit = Take Profit level. *Leave at default.*

TakeProfit_FAKE=Fake TP level to fool broker.

Range_OP = Level for Range filter. *Leave at default.*

OPFromFractal = Fractal setting / Internal strategy consideration. *Leave at default.*

PriceFromMid = Internal strategy consideration. Leave at default.

MinuteForNextOP = Internal strategy consideration. Leave at default.

MinuteForClose= Internal strategy consideration. Leave at default.

Slippage = Slippage level. *Leave at default.*

MaxSpread = Maximum allowable spread to enter trade. Protects from poor spread conditions.

TradesOnFriday = Enable/Disable Friday trading.

CloseOnFriday = Enable/Disable Automatic trade closure when Friday arrives.

MaxTrades = Maximum number of allowable trades to be entered at any given time.

MaxTradePerBar = Leave at default.

MaxTradePerPosition = Leave at default.

* All other inputs not listed are also internal strategy considerations and should be left at default *

IMPORTANT Under the Common Tab, you must CHECK “Allow for Live Trading” and “Allow DLL Inputs”.

If you trade with a broker that we have designed *Presets* for, you can click the *LOAD* button at this window. It will bring you to your presets folder. You can then load the appropriate preset file.

Once you have accomplished these steps, click OK. The EA will attach to the chart, and you should have a SMILEY face in the upper right hand corner of your screen.

If you do not have a smiley face, make sure Experts are enabled on the platform. Simply check and click the Expert Advisors button on the middle top menu bar of your MT4 terminal to make it appear with a green signal. Experts will then be enabled. If you still do not have a smiley face, then you did not thoroughly follow the aforementioned steps. Please re-check them and contact us at: support@quantum-investing.com.

THE EXPERT

QuantumTrader utilizes the price channels of the late US and early Asian session to make high probability, high frequency scalps of the market. The accuracy rate of our system is phenomenal, and we have been employing this strategy in our firm’s managed accounts for a very long time with great success.

QuantumTrader thrives on the **M5** charts. We personally trade on the 5M charts with QuantumTrader, so take this into consideration when you’re trading.

QuantumTrader utilizes the formation of fractals as well as a variety of other trade filters in the form of the custom indicators that came with this package. This combination of indicators and filters is what allows for such excellent entry and exits through our system.

In order to help protect our clients from unscrupulous MT4 brokers, our EA employs the use of hidden TP and hidden SL. The broker can not see these values and therefore can not stop hunt against you.

Please make sure you adjust the OpenHour and CloseHour inputs to the

appropriate times according to your broker's timezone for the Asian session open/close. If you are having difficulty adjusting or calculating these figures, please contact us at : support@quantum-investing.com. We will be more than happy to assist you in this task.

The preferred pair for this Expert Advisor is EURGBP. This Expert Advisor needs to be traded with as low a spread as possible. Given the annual liquidity issues in December, spreads are a bit high as of right now across most brokers. However, I recommend trading with a broker offering a spread lower than 5. The EA will not place trades if the spreads are too high, so you do not need to worry about entering into bad trades when you are not at your computer to monitor the spread. The EA will not place these trades.

I highly discourage the use of InterbankFX as a broker. They are an extremely poor brokerage and offer *TERRIBLE* spreads. They are most notorious for stop hunting (even though our EA hides SL and TP), and are extremely difficult to deal with. Please do not trade our EA with this firm.

**** YOU CAN NOT TRADE THIS EA WITH ODL SECURITIES ****

They have revealed themselves to be a scam broker and are discontinuing accounts who use our profitable EA. They have no interest in offering access to the markets for their clients. They want bad traders that they can trade against. Do not trade with ODL Securities.

For the time being, until mid-January rolls back around and spreads return to normal, our firm trades with both MIG Investments out of Switzerland, and FXPro. We are still seeing reasonable spreads on various other brokers during the course of the trader day including Alpari-US, Alpar-UK, and ActivTrades.

Remember, if you are using a broker that does not have a preset file, the OpenHour and CloseHour inputs must be adjusted to correspond to the Asian session based on your broker's server timezone. As mentioned before, if you encounter trouble doing so, contact us at:

support@quantum-investing.com

We fully recommend one of these brokers until January 2009 when spread conditions are returned to normal. Please keep in mind that the months of

December and early January experience low-liquidity as professional investors withdraw from the market. These high spreads are part of the annual market conditions that prevail during this time. We have compromised and adjusted the default MaxSpread to 5 for the time being, although a MaxSpread of 3 pips is preferable and should be re-adjusted to reflect so when the time comes.

This EA thrives in ranging market conditions. Forex is a dynamic and constantly changing market, like all financial markets. Right now, and for a while, the Asian session produces very docile ranges on many of the cross-pairs including EURGBP, making it the most extremely profitable current application to implement QuantumTrader. Some of you are very experienced traders and will go off on your own and find new applications on different pairs in different sessions for the EA in the future if market conditions change. Others who are not so experienced, rest assured, Quantum Investment Services is constantly updating our clients in order to ensure their survival in the market.

In the distant future, if these said conditions begin to fluctuate and vary we will need to adapt together in order to survive. Adaptability is what separates those that lose in the market to those that win. Being a client of Quantum Investment Services, LLC means you will be able to work with us in order to adapt should market conditions change, instead of being left “holding the bag” as you most probably have been in the past should you have purchased retail Forex products from anyone less than a professional.

Our firm is constantly trading the market, and adopting new strategies to give us an edge in any market condition. As a client of our firm, you will always receive automatic updates with improvements and tweaks we make to our system, in addition to **ANY NEW SYSTEMS** we develop in order to achieve success in the market. Welcome to Quantum Investment Services, LLC.

Please also make note that due to the current and annually expected market conditions of late December and early January, we have adjusted the “Risk” feature of the EA lower than our usual default. This is designed to protect “out of the box” users who may or may not have the experience to use their own discretion in adjusting risk based on market conditions. We will keep you updated on changes to Risk as the market dynamics return to normal.

The best of luck to you, and much success to us all.
Quantum Investment Services, LLC
